15 NETFLIX, INC.,

16 Plaintiff,

17 v.

18 BROADCOM INC., VMWARE LLC,

19 Defendants.

Case No. 3:24-cv-9324

**COMPLAINT FOR PATENT  
INFRINGEMENT**

**JURY TRIAL DEMANDED**

20  
21  
22  
23  
24  
25  
26  
27  
28

1 Plaintiff, Netflix, Inc. (“Plaintiff” or “Netflix”) hereby asserts the following claims for Patent  
2 Infringement against Defendants Broadcom Inc. (“Broadcom”) and VMware LLC (“VMware”),  
3 and alleges as follows:

4 **NATURE OF THE ACTION**

5 1. This is a civil action for patent infringement arising under the patent laws of the  
6 United States, 35 U.S.C. § 1, et seq.

7 2. Defendants Broadcom and VMware, jointly and severally, have directly infringed  
8 and continue to infringe, have induced and continue to induce, and have contributed to and continue  
9 to contribute to infringement of one or more claims of U.S. Patent Nos. 7,779,424 (the “’424 Patent”),  
10 7,797,707 (the “’707 Patent”), 8,799,891 (the “’891 Patent”), 8,185,893 (the “’893 Patent”) and  
11 8,863,122 (the “’122 Patent”) (collectively the “Asserted Patents”) through their development, use,  
12 and commercialization of the ’424, ’707, ’891, ’893, and ’122 Accused Products, as defined below.

13 3. Netflix is the owner of the Asserted Patents, which were duly and legally issued by  
14 the United States Patent and Trademark Office (“USPTO”). For each of the Asserted Patents, Netflix  
15 owns all substantial rights to sue for infringement in its own name, including for past, present, and  
16 future damages, and injunctive relief.

17 4. Netflix seeks monetary damages as redress for Broadcom’s and VMware’s  
18 infringement.

19 **THE PARTIES**

20 5. Netflix is a Delaware corporation with its principal place of business located at 121  
21 Albright Way, Los Gatos, California 95032.

22 6. Netflix was founded in Scotts Valley California in 1997 and is an innovative video  
23 on-demand streaming services company and one of the world’s leading entertainment services  
24 bringing TV series, films, games and live content to 278 million members in over 190 countries.

25 7. Broadcom is a corporation organized under the laws of the State of Delaware with  
26 regular and established places of business in this Judicial District, including offices in Palo Alto,  
27 Petaluma, and San Jose.

28 8. Broadcom’s organizational history involves a complex web of mergers and

1 acquisitions. In brief, in 1999, Hewlett-Packard’s Semiconductor Products Group spun off as  
2 Agilent Technologies, which later formed Avago Technologies. Avago merged with and acquired  
3 multiple companies between 2005 to 2015. Then, in 2015, Avago announced it would buy  
4 Broadcom but adopt the Broadcom name because of its broader name recognition.<sup>1</sup> Broadcom today  
5 comprises an amalgamation of companies, including Brocade Communications Systems, CA  
6 Technologies, Symantec Enterprise Security, and Avago, among many others.<sup>2</sup> Broadcom is known  
7 to sell off its acquired companies for parts in a strategy summed up as: “Buy. Chop up. Sell off.  
8 Raise prices. Rinse. Repeat.”<sup>3</sup>

9 9. On May 26, 2022, Broadcom and VMware entered into an Agreement and Plan of  
10 Merger (the “Merger Agreement”), and on November 22, 2023, Broadcom merged with or acquired  
11 VMware Inc. for \$69 billion in a “transformational” transaction.<sup>4</sup>

12 10. The series of transactions and agreements executed between Broadcom and VMware  
13 Inc. that ultimately resulted in Broadcom’s merger and/or acquisition of VMware Inc. is complex,  
14 perhaps intentionally so.

15 11. At the end of the transaction, VMware Inc. was renamed VMware LLC, and VMware  
16 products were thereafter sold under the brand name “VMware by Broadcom.”<sup>56</sup> VMware Inc. and  
17 VMware LLC are collectively referred to herein as “VMware.”

18 12. VMware has a principal place of business in this District, at 3401 Hillview Avenue,  
19 Palo Alto, California, 94304.

**JURISDICTION AND VENUE**

1  
2 13. Netflix brings this civil action for patent infringement under the Patent Laws of the  
3 United States, 35 U.S.C. § 1 et. seq., including 35 U.S.C. §§ 271, 281-285.

4 14. This Court has subject matter jurisdiction over this action pursuant to 28 U.S.C. §§  
5 1331 and 1338.

6 15. This Court has personal jurisdiction over Broadcom and VMware because they  
7 maintain their principal places of business in this District and engage in continuous and systematic  
8 business activities within this District.

9 16. Venue is proper in this District pursuant to at least 28 U.S.C. § 1400(b) because  
10 Broadcom and VMware maintain their principal places of business in this District, reside in this  
11 district, and have committed acts of patent infringement in this District.

**BACKGROUND**

12  
13 17. This Complaint asserts causes of action for infringement of the '424 Patent, the '707  
14 Patent, the '891 Patent, the '893 Patent, and the '122 Patent, (collectively, the "Asserted Patents").

15 18. The '424 Patent is entitled "System and Method for Attributing to a Corresponding  
16 Virtual Machine CPU Usage of an Isolated Driver Domain in which a Shared Resource's Device  
17 Driver Resides." Ludmila Cherkasova and Robert D. Gardner are identified on the face of the '424  
18 Patent as the inventors. On August 17, 2010, the USPTO duly and legally issued the '424 Patent  
19 from Application No. 11/070,674, filed on March 2, 2005. A true and correct copy is attached as  
20 Exhibit A. Netflix is the current owner by assignment of all rights, title, and interest in and under  
21 the '424 Patent, including the right to sue and obtain damages for past, current, and future  
22 infringement. Netflix has standing to sue for infringement of the '424 Patent.

23 19. The '707 Patent is entitled "System and method for attributing to a corresponding  
24 virtual machine CPU usage of a domain in which a shared resource's device driver resides." Ludmila  
25 Cherkasova and Robert D. Gardner are identified on the face of the '707 Patent as the inventors. On  
26 September 14, 2010, the USPTO duly and legally issued the '707 Patent from Application No.  
27 11/070,605, filed on March 2, 2005. A true and correct copy is attached as Exhibit B. Netflix is the  
28 current owner by assignment of all rights, title, and interest in and under the '707 Patent, including

1 the right to sue and obtain damages for past, current, and future infringement. Netflix has standing  
2 to sue for infringement of the '707 Patent.

3 20. The '891 Patent is entitled "System and method for attributing CPU usage of a virtual  
4 machine monitor to a corresponding virtual machine." Ludmila Cherkasova and Robert D. Gardner  
5 are identified on the face of the '891 Patent as the inventors. On August 5, 2014, the USPTO duly  
6 and legally issued the '891 Patent from Application No. 11/070,602, filed on March 2, 2005. A true  
7 and correct copy is attached as Exhibit C. Netflix is the current owner by assignment of all rights,  
8 title, and interest in and under the '891 Patent, including the right to sue and obtain damages for  
9 past, current, and future infringement. Netflix has standing to sue for infringement of the '891  
10 Patent.

11 21. The '893 Patent is entitled "Starting up at least one virtual machine in a physical  
12 machine by a load balancer." Chris D. Hyser and Bret A. McKee are identified on the face of the  
13 '893 Patent as the inventors. On May 22, 2012, the USPTO duly and legally issued the '893 Patent  
14 from Application No. 11/588,635, filed on October 27, 2006. A true and correct copy is attached  
15 as Exhibit D. Netflix is the current owner by assignment of all rights, title, and interest in and under  
16 the '893 Patent, including the right to sue and obtain damages for past, current, and future  
17 infringement. Netflix has standing to sue for infringement of the '893 Patent.

18 22. The '122 Patent is entitled "Starting up at least one virtual machine in a physical  
19 machine by a load balancer." Paul Bouchier, Scott E. Garee, and Bryan J. Jacquot are identified on  
20 the face of the '122 Patent as the inventors. On October 14, 2014, the USPTO duly and legally  
21 issued the '122 Patent from Application No. 13/383,506, filed on July 31, 2009. A true and correct  
22 copy is attached as Exhibit E. Netflix is the current owner by assignment of all rights, title, and  
23 interest in and under the '122 Patent, including the right to sue and obtain damages for past, current,  
24 and future infringement. Netflix has standing to sue for infringement of the '122 Patent.

25 **The '424 Patent**

26 23. The '424 Patent is generally directed to improvements in monitoring resource  
27  
28

1 utilization in a virtualized environment.<sup>7</sup> Before the '424 Patent, then-existing monitoring systems  
2 failed to accurately measure the CPU usage of a virtual machine, at least because they only  
3 considered the amount of CPU allocated by the scheduler for execution of a particular VM over  
4 time and failed to “reveal the ‘true’ usage of the CPU by different VMs.”<sup>8</sup> The '424 Patent explains  
5 that VMs communicate with driver domains—for example, the VMs may communicate access  
6 requests to a driver domain for shared resources.<sup>9</sup> But communication between the VMs and the  
7 driver domain, as well as processing the access requests themselves, also require CPU usage.<sup>10</sup>  
8 Then-existing systems did not accurately measure the CPU usage of a virtual machine because those  
9 systems failed to account for this CPU utilization of the driver domain in servicing the requests of  
10 each virtual machine for access to a resource.<sup>11</sup> The innovation of the '424 Patent addresses the  
11 inaccuracies in the prior art of tracking CPU usage of VMs. The patent describes observing  
12 communication from virtual machines to driver domains to accurately attribute CPU utilization of  
13 the driver domains to the corresponding virtual machines responsible for the resource requests.<sup>12</sup> In  
14 this way, the '424 Patent accurately tracks the CPU utilization attributable to each VM. The '424  
15 Patent therefore addresses a specific technical problem, existing in then-existing methods, of  
16 accurately measuring CPU utilization attributable to a VM.

17 24. The '424 Patent claims specific, novel techniques for solving these technical  
18 problems and improving the technological systems and methods themselves. For example, Claim 1  
19 recites:

20 A method comprising:  
21 observing communication from plurality of paravirtualized  
22 virtual machines (VMs) to driver domains that are isolated from the  
23

---

24  
25 <sup>7</sup> See '424 Patent, 1:25-30.

26 <sup>8</sup> *Id.*, 3:54-60.

27 <sup>9</sup> *Id.*, 3:60-62.

28 <sup>10</sup> *Id.*, 3:62-64.

<sup>11</sup> *Id.*, 3:58-4:2.

<sup>12</sup> *Id.*, 4:20-36.

1 plurality of VMs, the communication comprising at least one resource  
2 request from the plurality of VMs to the driver domains, comprising  
3 observing communication from said plurality of VMs requesting  
4 access to a shared resource that is accessible by the plurality of VMs,  
5 wherein a device driver for said shared resource is arranged in said  
6 driver domains; and

7 determining, based on said communication between the  
8 plurality of VMs and the plurality of driver domains, CPU utilization  
9 of said plurality of driver domains attributable to the plurality of VMs,  
10 including determining a share of CPU execution attributed to each of  
11 the VMs during a predetermined time interval.

12 25. In one aspect, the patent explains that the method claimed “can be used . . . for  
13 assistance in a whole variety of management tasks, such as: a) support of policy-based resource  
14 allocation; b) admission control of new VMs; c) support for VMs migration; and d) quality of service  
15 (“QoS”) provisioning of VMs.<sup>13</sup> As recited, the claimed solution involves “determining . . . CPU  
16 utilization of [a] plurality of driver domains attributable to the plurality of VMs,” where the  
17 determination is based specifically on “communication from plurality of paravirtualized virtual  
18 machines (VMs) to driver domains that are isolated from the plurality of VMs,” where the  
19 communication includes “at least one resource request from the plurality of VMs to the driver  
20 domains,” and “a device driver for said shared resource is arranged in [the] driver domains.” Claim  
21 1 therefore recites a combination of features that provide a particular, concrete technical  
22 improvements to a technical problem relating to accurately measuring CPU utilization. Specifically,  
23 and for example, determining, for each VM, the amount of CPU utilization of the isolated driver  
24 domain attributable to a particular VM.<sup>14</sup>

25 26. The above examples and the disclosures set forth in the attached and incorporated in  
26 the '424 Patent demonstrate that the claimed invention is not abstract and is directed to

27  
28 <sup>13</sup> *Id.*, 8:37-42.

<sup>14</sup> '424 Patent, 14:66-15:2.

1 improvements in the technology itself.

2 27. Pursuant to 35 U.S.C. § 282, the '424 Patent is presumed valid and patent eligible.

### 3 **The '707 Patent**

4 28. The '707 Patent is generally directed to improvements in monitoring resource  
5 utilization in a virtualized environment.<sup>15</sup> Before the '707 Patent, then-existing monitoring systems  
6 failed to accurately measure the CPU usage of a virtual machine, at least because they only  
7 considered the amount of CPU allocated by the scheduler for execution of a particular VM over  
8 time and failed to “reveal the ‘true’ usage of the CPU by different VMs.”<sup>16</sup> For example, and with  
9 more specificity, the '707 Patent explains that device drivers for shared resources may be located in  
10 a privileged management domain.<sup>17</sup> The '707 Patent explains that VMs communicate with the  
11 privileged management domains—for example, the VMs may communicate access requests to the  
12 privileged management domain for the shared resources.<sup>18</sup> But communication between the VMs  
13 and the privileged management domain, as well as processing the access requests, both themselves  
14 require CPU usage.<sup>19</sup> Then-existing systems did not accurately measure the CPU usage of a virtual  
15 machine because those systems failed to account for this CPU utilization of the privileged  
16 management domain in servicing the requests of each virtual machine for access to a resource.<sup>20</sup>  
17 The innovation of the '707 Patent addresses the inaccuracies in the prior art of tracking CPU usage  
18 of VMs. The patent describes observing communication from virtual machines to privileged  
19 management domains to accurately attribute CPU utilization of the privileged management domains  
20 to the corresponding virtual machines responsible for the resource requests.<sup>21</sup> In this way, the '707  
21 Patent accurately tracks the CPU utilization attributable to each VM. The '707 Patent therefore  
22 addresses a specific technical problem, existing in then-existing methods, of accurately measuring

23  
24 <sup>15</sup> See '707 patent, 1:26-27.

25 <sup>16</sup> *Id.*, 3:49-56.

26 <sup>17</sup> *Id.*, 3:56-58.

27 <sup>18</sup> *Id.*, 3:58-60.

28 <sup>19</sup> *Id.*, 3:60-67.

<sup>20</sup> *Id.*

<sup>21</sup> *Id.*, 4:20-37.

1 CPU utilization attributable to a VM.

2 29. The '707 Patent claims specific, novel techniques for solving these technical  
3 problems and improving the technological systems and methods themselves. For example, Claim 1  
4 recites:

5 A method comprising:  
6 observing, in a computer, communication from a virtual  
7 machine (VM) to a domain in which a device driver for a shared  
8 resource resides, wherein the domain is separate from a virtual  
9 machine monitor (VMM);  
10 determining, in the computer and based on said  
11 communication, CPU utilization of said domain attributable to said  
12 VM;  
13 determining, for the VM, CPU utilization allocated by a  
14 scheduler to the VM; and  
15 determining, for the VM, total CPU utilization attributable to  
16 the VM by summing the determined CPU utilization allocated to the  
17 VM by the scheduler and the determined CPU utilization of the  
18 domain attributable to the VM.

19 30. In one aspect, the patent explains that the method claimed can be used in a “whole  
20 variety of management tasks, such as: a) support of policy-based resource allocation; b) admission  
21 control of new VMs; c) support for VMs migration; and d) quality of service (‘QoS’) provisioning  
22 of VMs.”<sup>22</sup> As recited, the claimed solution involves “determining, in the computer and based on  
23 said communication, CPU utilization of said domain attributable to said VM,” where the  
24 determination is based specifically on “communication from a virtual machine (VM) to a domain in  
25 which a device driver for a shared resource resides, wherein the domain is separate from a virtual  
26 machine monitor (VMM).” Claim 1 therefore recites a combination of features that provide a  
27 particular, concrete technical improvements to a technical problem relating to accurately measuring

28 \_\_\_\_\_  
<sup>22</sup> *Id.*, 8:15-19.

1 CPU utilization. Specifically, and for example, determining, for each VM, the amount of CPU  
2 utilization of a domain attributable to a particular VM.<sup>23</sup>

3 31. The above examples and the disclosures set forth in the attached and incorporated  
4 '707 Patent demonstrate that the claimed invention is not abstract and is directed to improvements  
5 in the technology itself.

6 32. Pursuant to 35 U.S.C. § 282, the '707 Patent is presumed valid and patent eligible.

### 7 **The '891 Patent**

8 33. The '891 Patent is generally directed to improvements in monitoring resource  
9 utilization in a virtualized environment.<sup>24</sup> Before the '891 Patent, then-existing monitoring systems  
10 failed to accurately measure the CPU usage of a virtual machine, at least because they only  
11 considered the amount of CPU allocated by the scheduler for execution of a particular VM over  
12 time and failed to “reveal the ‘true’ usage of the CPU by different VMs.”<sup>25</sup> The '891 Patent explains  
13 “the CPU utilization of the VMM [virtual machine monitor] in servicing the requests of each VM  
14 (requesting to access a resource) are not attributed to the corresponding VMs in this technique.”<sup>26</sup>  
15 For example, virtualization of input/output (I/O) devices results in an I/O model where the data  
16 transfer process involves additional system components, such as the VMM. Hence, the CPU usage  
17 when the VMM handles the I/O data on behalf of a particular VM should be charged to the  
18 corresponding VM. Then-existing systems that simply monitored the CPU utilization allocated by  
19 the scheduler to the corresponding VM failed to account for the CPU utilization of the VMM in  
20 handling the I/O data on behalf of such corresponding VM. Thus, the traditional technique of  
21 determining CPU utilization of each VM does not fully capture the CPU utilization attributable to a  
22 VM, as it fails to account for the corresponding VMM CPU utilization that is performed for each  
23 VM.<sup>27</sup> The innovation of the '891 Patent addresses the inaccuracies in the prior art of tracking CPU  
24 usage of VMs. In particular, the '891 Patent relates to attributing CPU usage of a resource to a

25 \_\_\_\_\_  
<sup>23</sup> *Id.*, 11:6-8.

26 <sup>24</sup> *See* '891 Patent, 1:24-25.

27 <sup>25</sup> *Id.*, 3:36-40.

28 <sup>26</sup> *Id.*, 3:40-43.

<sup>27</sup> *Id.*

1 corresponding VM that caused such CPU usage by the VMM.<sup>28</sup> In this way, the '891 Patent  
2 accurately tracks the CPU utilization attributable to each VM. The '891 Patent therefore addresses  
3 a specific technical problem, existing in then-existing methods, of accurately measuring CPU  
4 utilization attributable to a VM.

5 34. The '891 Patent claims specific, novel techniques for solving these technical  
6 problems and improving the technological systems and methods themselves. For example, Claim 1  
7 recites:

8 A method comprising:

9 observing communication from a given virtual machine (VM)  
10 of a plurality of VMs, to a virtual machine monitor (VMM), by  
11 observing communication from said VM that is requesting access to  
12 a resource, as an access request for said VM by said VMM; and

13 determining, based on said communication, utilization of the  
14 CPU by said VMM specifically attributable to said VM, and not  
15 attributable to any other of the plurality of VMs, wherein the  
16 utilization of the CPU by said VMM is the utilization of the CPU by  
17 said VMM performed for processing said access request for said VM  
18 by said VMM.

19 35. In one aspect, the patent explains that the method claimed “can be used, [for]  
20 example[], for assistance in billing and/or for a whole variety of management tasks, such as: a)  
21 support of policy-based resource allocation; b) admission control of new VMs; c) support for VMs  
22 migration; and d) quality of service (‘QoS’) provisioning of VMs.”<sup>29</sup> As recited, the claimed solution  
23 involves “determining, based on said communication, utilization of the CPU by said VMM  
24 specifically attributable to said VM, and not attributable to any other of the plurality of VMs,  
25 wherein the utilization of the CPU by said VMM is the utilization of the CPU by said VMM  
26 performed for processing said access request for said VM by said VMM,” where the “said

27  
28 <sup>28</sup> *Id.*, 1:25-28.

<sup>29</sup> *Id.*, 6:57-61.

1 communication” includes “communication from said VM that is requesting access to a resource, as  
2 an access request for said VM by said VMM.” Claim 1 therefore recites a combination of features  
3 that provide a particular, concrete technical improvements to a technical problem relating to  
4 accurately measuring CPU utilization. Specifically, and for example, determining, for each VM, the  
5 amount of CPU utilization of the VMM attributable to a particular VM.<sup>30</sup>

6 36. The above examples and the disclosures set forth in the attached and incorporated  
7 '891 Patent demonstrate that the claimed invention is not abstract and is directed to improvements  
8 in the technology itself.

9 37. Pursuant to 35 U.S.C. § 282, the '891 Patent is presumed valid and patent eligible.

### 10 **The '893 Patent**

11 38. The '893 Patent is generally directed to improvements in optimizing the use and  
12 management of virtual machines.<sup>31</sup> Before the '893 Patent, then-existing load balancing techniques  
13 would merely plan ahead for the worst-case loading scenario by planning in advance for a sufficient  
14 number of servers to be provided.<sup>32</sup> However, the then-existing techniques left servers idle during  
15 periods of low demand, resulting in significant overall energy consumption in large networks, and  
16 also failed to account for changes in conditions in the physical machines that may benefit from  
17 virtual machines migrating between or among physical machines.<sup>33</sup> Additionally, then-existing  
18 techniques for determining the optimal placement for virtual machines (referred to as the “placement  
19 problem”) required a large computation time, especially for large systems with many physical and  
20 virtual machines.<sup>34</sup> The innovation of the '893 Patent avoids the excess energy consumption and  
21 computational requirements of the prior art. The patent describes using a load balancer to distribute  
22 requests to active virtual machines and starting up additional virtual machines as the loading of the  
23 active virtual machines becomes heavy.<sup>35</sup> The '893 Patent therefore addresses a specific technical

---

24  
25 <sup>30</sup> *Id.*, 12:31-34.

26 <sup>31</sup> '893 Patent, 1:31-38.

27 <sup>32</sup> *Id.*, 1:15-21.

28 <sup>33</sup> *Id.*, 1:23-27, 6:14-19.

<sup>34</sup> *Id.*, 6:20-25.

<sup>35</sup> *Id.*

1 problem, existing in then-existing methods, of optimizing the placement of virtual machines,  
2 thereby reducing energy consumption by minimizing the need for idle servers during period of low  
3 demand.<sup>36</sup> In another aspect, the '893 Patent offers technical improvements by accounting for  
4 changes in conditions in the physical machines that may benefit from virtual machines migrating  
5 between or among physical machines.<sup>37</sup>

6 39. The '893 Patent claims specific, novel techniques for solving these technical  
7 problems and improving the technological systems and methods themselves. For example, Claim  
8 16 recites:

9 A method for use in a system having plural physical machines  
10 that contain active virtual machines, comprising:

11 receiving, at a load balancer, a request from a client;

12 in response to the request, determining whether at least one  
13 additional virtual machine should be started up;

14 in response to determining that at least one additional virtual  
15 machine should be started up, the load balancer sending at least one  
16 command to start up the at least one additional virtual machine in at  
17 least one of the physical machines;

18 determining, by the load balancer, whether a workload  
19 loading of the active virtual machines and the at least one additional  
20 virtual machine has fallen below a threshold;

21 in response to determining that the workload loading has  
22 fallen below the threshold, disabling a particular one of the active  
23 virtual machines and the at least one additional virtual machine;

24 a placement controller selecting placement of the active  
25 virtual machines and the at least one additional virtual machines on  
26 the physical machines to achieve a predefined policy;

27  
28 <sup>36</sup> *Id.*, 5:57-6:13.

<sup>37</sup> *Id.*, 6:14-19.

1 computing, by the placement controller, indicators associated  
2 with corresponding plural different layouts of the active virtual  
3 machines and the at least one additional virtual machine on the  
4 physical machines, where the indicators provide information  
5 regarding performances of the corresponding layouts, and wherein  
6 each of the indicators is computed based on parameters associated  
7 with a corresponding one of the plural layouts;

8 comparing, by the placement controller, the indicators; and  
9 selecting, by the placement controller, one of the plural  
10 layouts based on the comparing.

11 40. In one aspect, the patent explains that the placement controller selects one of the  
12 plural different layouts through the use of a “cost function,” which takes into account resource  
13 loading criteria, balancing criteria, cooling criteria, and power criteria.<sup>38</sup> As recited, the claimed  
14 solution involves the placement controller computing indicators associated with different layouts  
15 and selecting one of the layouts based on the computed indicators. Claim 16 therefore recites a  
16 combination of features that provide a particular, concrete technical improvements to a technical  
17 problem relating to the “placement problem” by optimizing the placement of virtual machines,  
18 thereby reducing energy consumption by minimizing the need for idle servers during period of low  
19 demand.<sup>39</sup> Specifically, and for example, avoiding the excess energy consumptions and/or the excess  
20 computational requirements of the prior art by optimizing the placement of virtual machines.

21 41. The above examples and the disclosures set forth in the attached and incorporated  
22 ’893 Patent demonstrate that the claimed invention is not abstract and is directed to improvements  
23 in the technology itself.

24 42. Pursuant to 35 U.S.C. § 282, the ’893 Patent is presumed valid and patent eligible.

### 25 **The ’122 Patent**

26 43. The ’122 Patent is generally directed to improvements in remotely controlling  
27

---

28 <sup>38</sup> *Id.*, 6:37-53.

<sup>39</sup> *Id.*, 5:57-6:13.

1 multiple virtual machines.<sup>40</sup> Before the '122 Patent, remote users of a remote management system  
2 could only control the physical hardware of the server, but not the associated virtual machines.<sup>41</sup>  
3 Further, a single computer may host multiple virtual machines that are designed by different entities  
4 and as a result, often have different interfaces.<sup>42</sup> The innovation of the '122 Patent addresses the  
5 challenges of remotely managing multiple virtual machines by enabling users to remotely control  
6 multiple virtual machines with a universal interface from a host computer has wide application. The  
7 patent describes integrating virtual machines with server processing logic, enabling a user to power  
8 on, power off, restart, and perform various other actions on each virtual machine from a universal  
9 interface.<sup>43</sup> For example, the claimed method may allow a user to select buttons, “thereby causing  
10 the remote computer... to “power off” the VM,” or may allow a user to remotely reset the virtual  
11 machines or remotely select particular virtual machines for various operations.<sup>44</sup> In this way, the  
12 '122 Patent streamlines the remote interaction with virtual machines, including in circumstances  
13 where different virtual machines are designed by different entities and have different interfaces. The  
14 '122 Patent therefore addresses specific problems, existing in then-existing methods of efficiently  
15 managing and controlling virtual machines.

16 44. The '122 Patent claims specific, novel techniques for solving these technical  
17 problems and improving the technological systems and methods themselves. For example, Claim  
18 10 recites:

19 A method, comprising:

20 providing a first graphical user interface (GUI) from a host  
21 computer to a remote computer, the first GUI displaying on the  
22 remote computer a list of a plurality of virtual machines and to enable  
23 a user of the remote computer to select one of the virtual machines  
24 from the list as well as an action to be performed on the selected

25 \_\_\_\_\_  
26 <sup>40</sup> See '122 Patent, 2:24-26.

27 <sup>41</sup> See *id.*, 4:4-7.

28 <sup>42</sup> See *id.*, 1:16-20.

<sup>43</sup> *Id.*, 2:25-33.

<sup>44</sup> *Id.*, 4:58-5:11.

1 virtual machine, the selected action to be performed on the selected  
2 virtual machine independent of the other of the plurality of virtual  
3 machines;

4 receiving user input from the remote computer via the first  
5 GUI, the user input including a selection of a virtual machine and an  
6 action to be performed on the selected virtual machine;

7 in accordance with the user input, performing the action using  
8 the host computer on the selected virtual machine; and

9 generating a second GUI to enable the user of the remote  
10 computer to select a virtual machine from the plurality of virtual  
11 machines to which a hardware peripheral device accessible to the  
12 remote computer is to be mapped;

13 wherein said action is selected from the group consisting of  
14 starting, stopping, re-booting and shutting down.

15 45. In one aspect, the patent explains that user may utilize a graphical user interface  
16 (GUI) on a remote computer to make selections “regarding how to control and manage one or more  
17 VMs” and this input is provided to the service processing logic, which performs the user’s requested  
18 action.<sup>45</sup> Additionally, the claimed solution also allows a user of a remote computer to install  
19 software from a CD onto the VM, as “the service processing logic 210 is able to map the CD/DVD  
20 drive 50 to the server.<sup>46</sup> The recited solution further advantageously allows mapping of a hardware  
21 peripheral device: “[b]y mapping the CD/DVD drive 50 to the server 106 to create a virtualized  
22 CD/DVD drive on the server 106, and further by mapping the virtualized CD/DVD drive to a VM  
23 312, the VM 312 is given access to the contents of any CD or DVD that may be inserted into the  
24 CD/DVD drive 50 on the remote computer 102. Embodiments are not limited to CD/DVD drives,  
25 however, and any of a variety of peripherals coupled to the remote computer 102 may be mapped  
26

27  
28 <sup>45</sup> See *id.*, 6:60-7:14.

<sup>46</sup> *Id.*, 8:25-30.

1 to any VM on the server 106.”<sup>47</sup> Claim 10 therefore recites a combination of features that provide a  
2 particular, concrete technical improvements to a technical problem relating to efficiently managing  
3 and controlling multiple virtual machines. Specifically, and for example, improving the remote  
4 management and control of virtual machines and allowing hardware peripheral devices to be  
5 mapped to a server.

6 46. The above examples and the disclosures set forth in the attached and incorporated  
7 ’122 Patent demonstrate that the claimed invention is not abstract and is directed to improvements  
8 in the technology itself.

9 47. Pursuant to 35 U.S.C. § 282, the ’122 Patent is presumed valid and patent eligible.

#### 10 **DEFENDANTS’ INFRINGEMENT AND LIABILITY**

11 48. When it merged with VMware, Broadcom told its investors that VMware “pioneered  
12 the concept of virtualization.”<sup>48</sup> However, as explained herein, VMware did so by leveraging the  
13 technological innovations of others.

14 49. On information and belief, Broadcom stands in VMware’s shoes or shares liability  
15 for all infringement, both before and after the Merger Agreement.

16 50. On information and belief, any and all knowledge of the Asserted Patents and  
17 knowledge of infringement thereof held by VMware shall also be deemed held by Broadcom as a  
18 result of the Merger Agreement.

19 51. For example, pursuant to the Merger Agreement, VMware, Inc.’s operations,  
20 knowledge, products, product marketing/instructions, and employees merged into Broadcom.  
21 Broadcom described the “anticipated synergies and economies of scale expected from the  
22 integration of the VMware business . . . includ[ing] cost savings, operating efficiencies and other  
23 strategic benefits projected to be achieved as a result of the VMware Merger.”<sup>49</sup> Broadcom described  
24 the challenges of the VMware Merger as “integrating the VMware workforce,” “integrating

25 \_\_\_\_\_  
<sup>47</sup> *Id.*, 8:42-50.

26 <sup>48</sup> Broadcom (AVGO) Q2 2022 Earnings Call Transcript, Motley Fool Transcribing, Fool.com  
27 (May 26, 2022), available at <https://www.fool.com/earnings/call-transcripts/2022/06/02/broadcom-ltd-avgo-q2-2022-earnings-call-transcript/>.

28 <sup>49</sup> Broadcom SEC Form 10-Q for quarter ending on August 4, 2024, available at  
<https://investors.broadcom.com/static-files/b32ea83a-0ca4-4f37-bd83-715a82ad795a> at 12.

1 operations,” “integrating corporate, information technology, finance and administrative  
2 infrastructures,” and “integrating financial forecasting and controls, procedures and reporting  
3 cycles.”<sup>50</sup> In its IRS filings, Broadcom refers to the Transaction as the “Broadcom/VMware  
4 Combination.”<sup>51</sup>

5 52. As another example, on information and belief, VMware employees who had  
6 knowledge of the Asserted Patents while at VMware are now employed by Broadcom, such as, for  
7 example, VMware Inc.’s former Director of Intellectual Property.

8 53. Accordingly, on information and belief, Broadcom and VMware are jointly and  
9 severally liable for infringement of all the Asserted Patents, including past and future damages, as  
10 set forth in detail herein.

11 **FIRST CLAIM FOR RELIEF**

12 **Infringement of U.S. Patent No. 7,779,424 (the “’424 Patent”)**

13 ***Against Broadcom and VMware***

14 54. Netflix incorporates by reference paragraph nos. 1-53.

15 55. Broadcom and VMware, jointly and severally, have infringed, and continue to  
16 infringe, at least Claim 1 of the ’424 Patent, either literally or under the doctrine of equivalents, by  
17 making, using, selling, and/or offering for sale within the United States and/or importing into the  
18 United States products that are covered by at least Claim 1 of the ’424 Patent. These products  
19 include, but are not limited to VMware vSphere Foundation, VMware Cloud Foundation, VMware  
20 Cloud on AWS, Azure VMware Solution, Google Cloud VMware Engine, Oracle Cloud VMware  
21 Solution, IBM Cloud for VMware Solutions, Alibaba Cloud VMware Service, as well as any other  
22 vSphere-based products and/or services (collectively, the “’424 Accused Products”).

23 56. Claim 1 of the ’424 Patent recites:

24 A method comprising:

25 observing communication from plurality of paravirtualized

26  
27 <sup>50</sup> Broadcom SEC Form 10-K for fiscal year ending on October 29, 2023, available at  
<https://investors.broadcom.com/static-files/2b98b262-4fbb-4731-b3dd-88f6ca187002> at 17-18

28 <sup>51</sup> Broadcom SEC Form 8937 filed on December 21, 2023, available at  
<https://investors.broadcom.com/static-files/7720c4c1-c940-4d9d-800c-66819bfdc7a0> at 2.

1 virtual machines (VMs) to driver domains that are isolated from the  
2 plurality of VMs, the communication comprising at least one resource  
3 request from the plurality of VMs to the driver domains, comprising  
4 observing communication from said plurality of VMs requesting  
5 access to a shared resource that is accessible by the plurality of VMs,  
6 wherein a device driver for said shared resource is arranged in said  
7 driver domains; and

8 determining, based on said communication between the  
9 plurality of VMs and the plurality of driver domains, CPU utilization  
10 of said plurality of driver domains attributable to the plurality of VMs,  
11 including determining a share of CPU execution attributed to each of  
12 the VMs during a predetermined time interval.

13 57. The '424 Accused Products perform a method comprising “observing  
14 communication from plurality of paravirtualized virtual machines (VMs) to driver domains that are  
15 isolated from the plurality of VMs, the communication comprising at least one resource request  
16 from the plurality of VMs to the driver domains, comprising observing communication from said  
17 plurality of VMs requesting access to a shared resource that is accessible by the plurality of VMs,  
18 wherein a device driver for said shared resource is arranged in said driver domains.”

19 58. Broadcom and VMware’s vSphere products allow VMs to share CPU, storage, and  
20 networking resources. For example, vSphere is described by Broadcom and VMware as a  
21 “virtualization platform, which transforms data centers into aggregated computing infrastructures  
22 that include CPU, storage, and networking resources.”<sup>52</sup>

<sup>52</sup> “VMware vSphere Documentation,” VMware.com (captured December 4, 2022),  
<https://web.archive.org/web/20221204141132/https://docs.vmware.com/en/VMware-vSphere/index.html>.

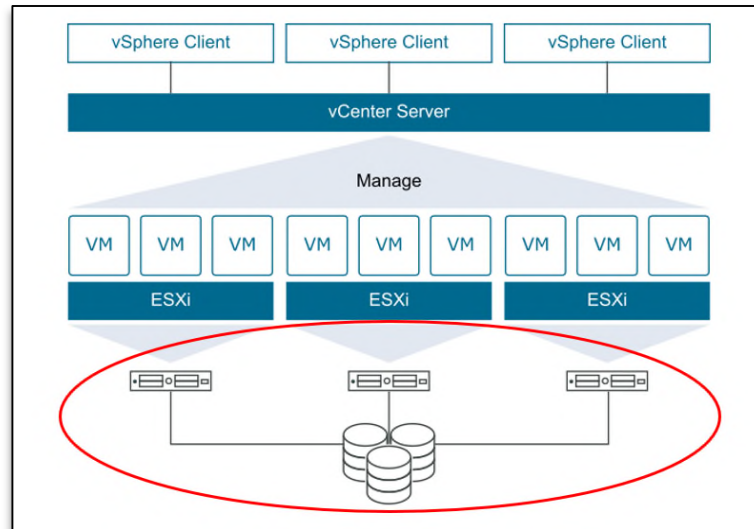

Figure 1. Annotated vSphere architecture diagram with the shared CPU, storage, and networking resources circled in red.

59. Broadcom and VMware describe that “the two core components of vSphere are ESXi and vCenter Server.”<sup>53</sup> ESXi creates and runs virtual machines while vCenter Server allows for managing multiple “hosts”—individual computers running ESXi—and pooling resources between those hosts.<sup>54</sup> As shown, each host runs an instance of ESXi which in turn runs multiple VMs. vCenter Server manages the multiple instances of ESXi and interacts with the vSphere Client.

[remainder of page intentionally left blank]

<sup>53</sup> *Id.*

<sup>54</sup> *Id.*

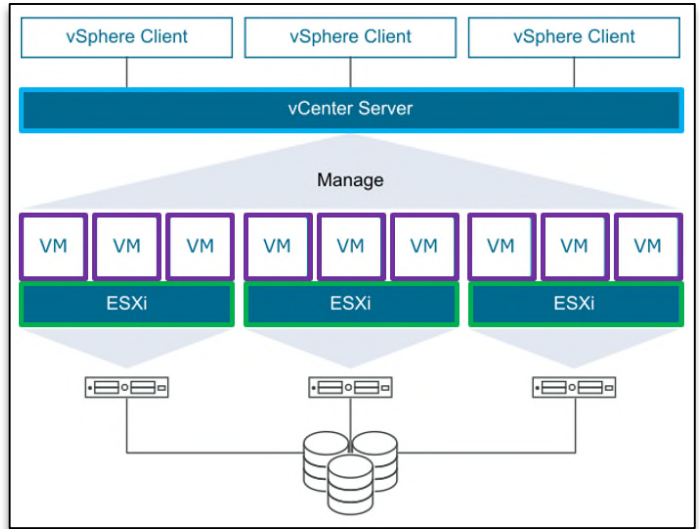

Figure 2. Annotated vSphere architecture diagram with ESXi instances in green, vCenter Server in blue, and individual VMs in purple.

60. With respect to “paravirtualized” VMs, “VMware Paravirtual controllers,” used for running paravirtualized virtual machines, have been a “supported feature” of vSphere since ESXi version 4 (which released on May 21, 2009).<sup>55</sup>

Table 5-2. Supported Features for Virtual Machine Compatibility

Feature	ESXi 6.5 and later	ESXi 6.0 and later	ESXi 5.5 and later	ESXi 5.1 and later	ESXi 5.0 and later	ESX/ESXi 4.x and later	ESX/ESXi 3.5 and later
				...			
VMware Paravirtual controllers	Y	Y	Y	Y	Y	Y	N

Figure 3. Excerpted and annotated Table 5-2 from vSphere Virtual Machine Administration document.

61. Within ESXi is an “underlying operating system, called VMkernel.”<sup>56</sup> VMkernel provides “[r]esource scheduling” functionality for ESXi. VMkernel interfaces with hardware to deliver the shared CPU, storage, and network resources from the host to specific virtual machines.<sup>57</sup>

<sup>55</sup> “VMware ESXi Release and Build Number History,” Virten.net (copyright 2023), <https://www.virten.net/vmware/esxi-release-build-number-history/#esxi4.0>.

<sup>56</sup> “The Architecture of VMware ESXi,” VMware.com (captured December 9, 2008), [https://web.archive.org/web/20081209120933/http://www.vmware.com/files/pdf/ESXi\\_architecture.pdf](https://web.archive.org/web/20081209120933/http://www.vmware.com/files/pdf/ESXi_architecture.pdf).

<sup>57</sup> *Id.*

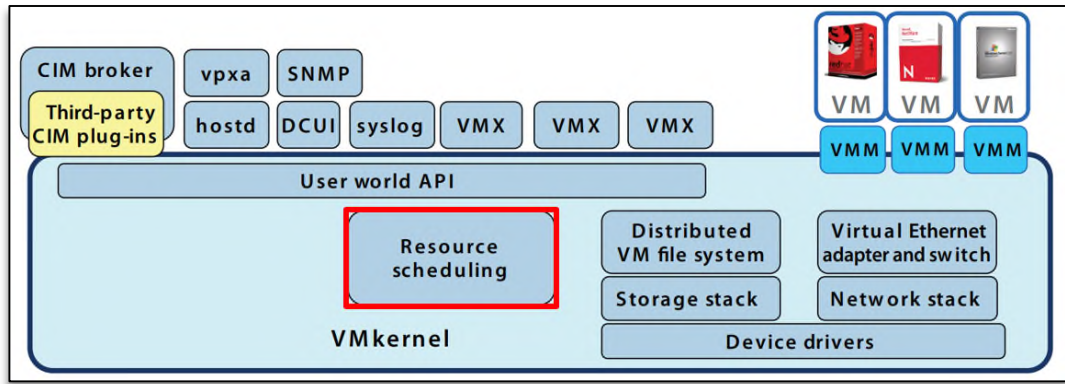

Figure 4. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with “Resource Scheduling” highlighted in red.

62. Each virtual machine communicates with the VMkernel through a process running on top of the VMkernel called a virtual machine monitor (“VMM”). This communication includes VM requests for host resources—indeed, VMkernel “has control of all hardware devices on the [host], and manages resources for the applications.”<sup>58</sup>

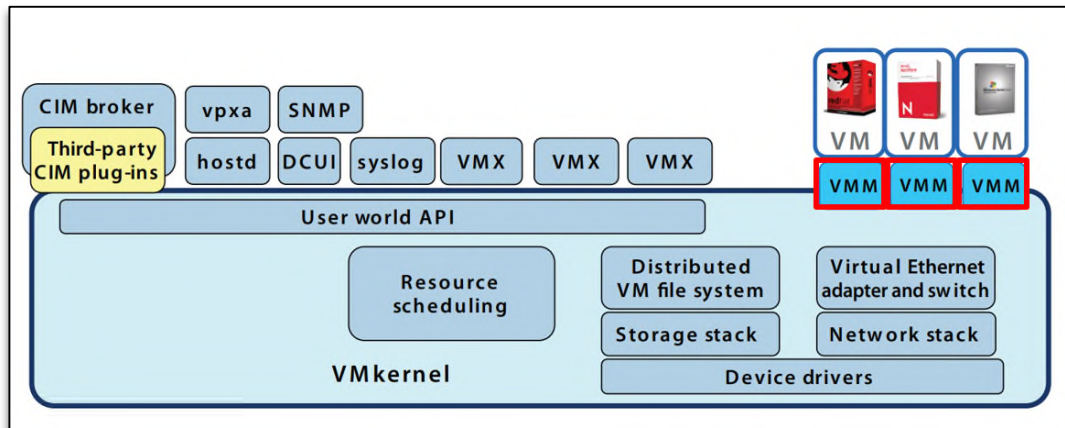

Figure 5. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with VMMs highlighted in red.

63. The VMMs isolate the virtual machines from the VMkernel.

[remainder of page intentionally left blank]

<sup>58</sup> *Id.*

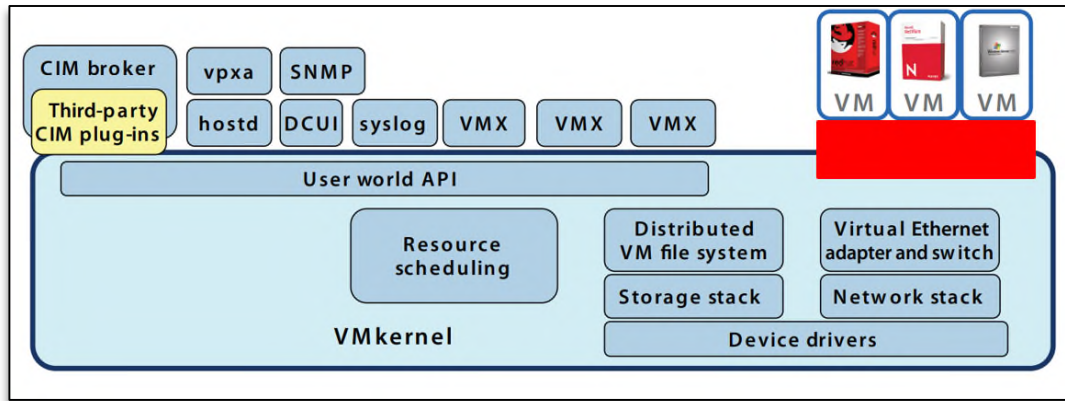

Figure 6. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with VMMs covered in a red box to show isolation of VMs from the VMkernel.

64. The VMkernel includes the device drivers for the shared resources.

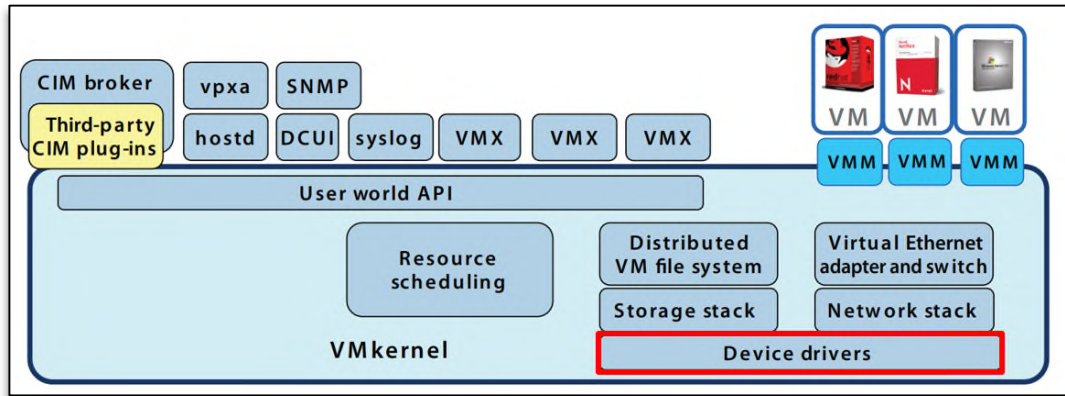

Figure 7. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper showing location of device drivers in the VMkernel using red highlighting.

65. The “Common Information Model (CIM) system” is another process that runs on top of VMkernel.<sup>59</sup> This system is described as “enabl[ing] a framework for agentless, standards-based monitoring of hardware resources for ESXi.”<sup>60</sup> The CIM system consist of “a CIM object manager, often called a CIM broker, and a set of CIM providers.”<sup>61</sup> Specifically, “VMware [] writes providers that implement monitoring of server hardware, ESX/ESXi storage infrastructure, and virtualization-specific resources” and “these providers run inside the ESXi system.”<sup>62</sup>

66. The ’424 Accused Products also perform the step of “determining CPU utilization of each VM based on said observed communication between the plurality of VMs and the plurality of

<sup>59</sup> *Id.*

<sup>60</sup> *Id.*

<sup>61</sup> *Id.*

<sup>62</sup> *Id.*

1 driver domains, wherein said determining includes determining CPU utilization of said driver  
2 domain attributable to each of said VMs, including determining a share of CPU execution  
3 attributable to said each VM during a predetermined time interval.”

4 67. For example, vSphere includes a “statistics subsystem [which] collects data on the  
5 resource usage of inventory objects.”<sup>63</sup> The product literature explains:

6 68. [H]osts use data counters to query for statistics. A data counter is a unit of  
7 information relevant to a given inventory object or device. Each counter collects data for a different  
8 statistic in a metric group. For example, the disk metric group includes separate data counters to  
9 collect data for disk read rate, disk write rate, and disk usage. Statistics for each counter are rolled  
10 up *after a specified collection interval*.<sup>64</sup>

11 69. vSphere monitors CPU usage of virtual machines. For example, the CPU panel  
12 displays “server-wide statistics as well as statistics for . . . virtual machine CPU utilization.”<sup>65</sup> One  
13 of these statistics, %USED, reflects the percentage of physical CPU core cycles used and may be  
14 calculated for specific virtual machines.<sup>66</sup>

15 70. %USED is calculated using the following formula:

16 71.  $\%USED = \%RUN + \%SYS - \%OVRP$

17 72. In this formula, %RUN is the percentage of total time scheduled but does not account  
18 for system time.

19 73. %SYS is the “[p]ercentage of time spent in the ESXi VMkernel on behalf of the . . .  
20 virtual machine . . . to process interrupts and to perform other system activities.”

21 74. %OVRP is the “[p]ercentage of system time spent during scheduling of a resource  
22 pool, virtual machine, or world on behalf of a different resource pool, virtual machine, or world  
23 while the resource pool, virtual machine, or world was scheduled.” For example, “if virtual machine  
24 A is being scheduled and a network packet for virtual machine B is processed by the ESXi

25 <sup>63</sup> “vSphere Monitoring and Performance,” VMware.com (copyright 2010-2021),  
26 [https://docs.vmware.com/en/VMware-vSphere/7.0/vsphere-esxi-vcenter-server-703-monitoring-  
performance-guide.pdf](https://docs.vmware.com/en/VMware-vSphere/7.0/vsphere-esxi-vcenter-server-703-monitoring-performance-guide.pdf).

27 <sup>64</sup> *Id.*

28 <sup>65</sup> *Id.*

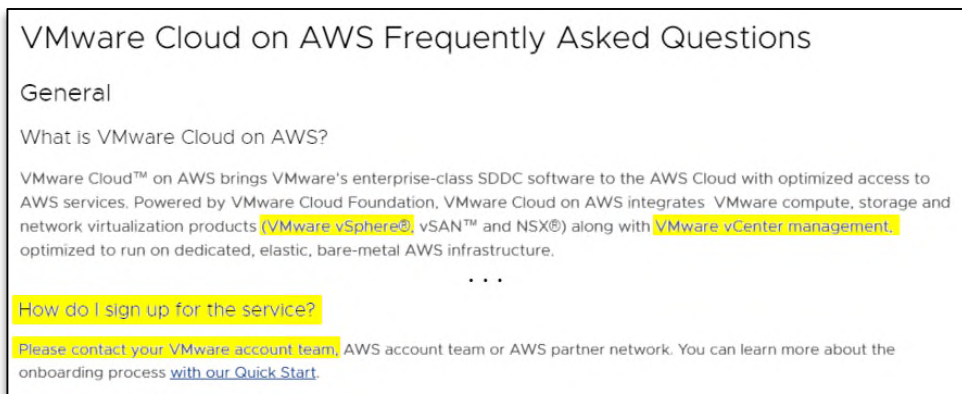

<sup>66</sup> *Id.*

1 VMkernel, the time spent appears as %OVRLP for virtual machine A and %SYS for virtual machine  
 2 B.” Accordingly, the ’424 Accused Products perform all steps of Claim 1 of the ’424 Patent.

3 **DIRECT INFRINGEMENT**

4 75. Broadcom and VMware, jointly and severally, have directly infringed, and  
 5 Broadcom and VMware continue to infringe, the ’424 Patent in multiple ways.  
 6 Broadcom and VMware directly infringe the ’424 Patent at least when they perform the claimed  
 7 methods of the ’424 Patent, in violation of at least 35 U.S.C. § 271(a), by providing the ’424  
 8 Accused Products as a service.

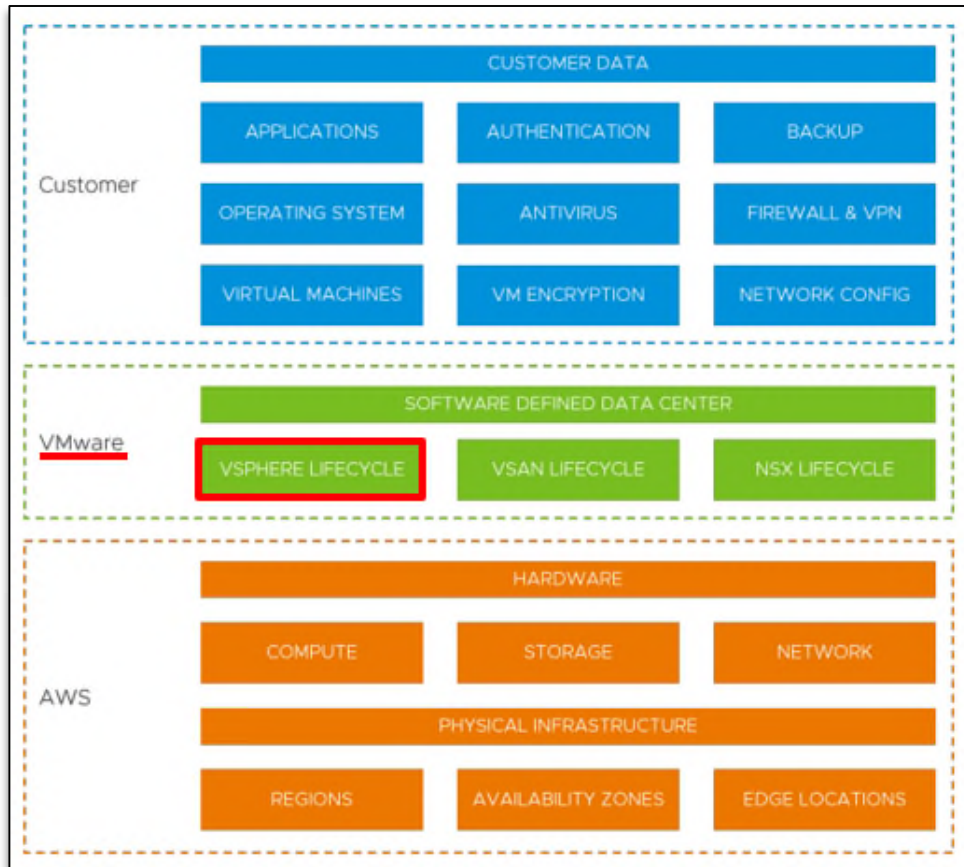

9  
10  
11  
12  
13  
14  
15 *Figure 8. Annotated screenshot from VMware Cloud Tech Zone FAQ page explaining the*  
 16 *VMware Cloud on AWS Service and how to sign up.*

17 76. When a customer signs up for and uses a vSphere cloud-based service (e.g., VMware  
 18 Cloud on AWS), Broadcom and VMware perform the claimed methods as detailed above by  
 19 controlling and maintaining responsibility for the infringing functionality.

20 77. Broadcom and VMware also condition the benefit of the ’424 Accused Products on  
 21 Broadcom and VMware’s partners performing the infringing functionality and Broadcom and  
 22 VMware’s control of the manner and timing of said performance. For example, Broadcom and  
 23 VMware maintain a “Shared Responsibility Model” that is “common among the different VMware  
 24 Cloud Providers” and “defines distinct roles and responsibilities between the VMware Cloud  
 25 Infrastructure Services provider and an organization consuming the service.”<sup>67</sup> As shown below,  
 26 Broadcom and VMware maintain responsibility for the “vSphere Lifecycle.” As further

27  
28 <sup>67</sup> “VMware Cloud Well-Architected Framework for VMware Cloud on AWS,” VMware.com (copyright 2023), <https://docs.vmware.com/en/VMware-Cloud-Well-Architected-Framework/services/vmcwaf-aws.pdf>.

1 confirmation, when describing the AWS implementation, Broadcom and VMware describe one of  
 2 the goals of the shared responsibility model as being to “[p]rotect VMware-managed objects”  
 3 including “management appliances” and “hosts.”<sup>68</sup> The “management appliances” and “hosts”  
 4 execute code performing the steps of Claim 1 described above.

5

19  
20  
21  
22  
23  
24  
 78. Broadcom and VMware also directly infringe by using the claimed method to demonstrate, test, install, and configure the ’424 Accused Products for their customers. For example, Broadcom and VMware directly infringe by using the ’424 Accused Products for demonstrating via VMware Hands-on Labs, *infra*.

25  
**INDIRECT INFRINGEMENT: INDUCEMENT**

26  
 79. VMware had actual knowledge of the ’424 Patent since at least August 3, 2012, when

27  
28  
<sup>68</sup> “VMware Cloud on AWS: vCenter Architecture,” VMware.com (copyright 2005-2024), <https://vmc.techzone.vmware.com/vmc-arch/docs/compute/vmc-aws-vcenter-architecture#sec27179-sub1>.

1 the '424 Patent was cited by an examiner at the United States Patent and Trademark Office  
2 ("USPTO") during a rejection of VMware's application that ultimately issued as U.S. Patent No.  
3 8,650,564.

4 80. Moreover, VMware cited to the application that issued as the '424 Patent (U.S. Patent  
5 App. No. 2006/0200821A1, the "'821 Pub") in Information Disclosure Statements filed on August  
6 17, 2016 (during prosecution of VMware Inc's U.S. Patent No. 9,513,950) and both on September  
7 7, 2016 and October 24, 2016 (during prosecution of VMware Inc's U.S. Patent No. 10,761,895).  
8 These IDSs were filed after the '821 Pub had already issued as the '424 Patent, on August 17, 2010.

9 81. VMware was reminded of the '424 Patent on multiple occasions when the USPTO  
10 identified the '821 Pub during prosecution of VMware's patent applications. For example, the '821  
11 Pub was relied upon in non-final rejections on April 11, 2016 and June 30, 2017 and a final rejection  
12 on October 6, 2016 and January 10, 2018; argued over by VMware in responses to those rejections,  
13 which were filed on July 11, 2016; December 22, 2016; and May 10, 2018; and discussed during an  
14 examiner interview on April 12, 2018; all of which occurred during prosecution of the application  
15 that issued to VMware as U.S. Patent No. 11,010,197. Similarly, the '821 Pub was identified in a  
16 rejection on August 7, 2019 during prosecution of the patent that issued to VMware as U.S. Patent  
17 No. 10,628,330.

18 82. VMware also abandoned applications in which the '821 Pub was cited. U.S. App.  
19 No. 12/126,705 was abandoned after the USPTO substantively relied upon the '821 Pub when  
20 rejecting VMware's application over multiple rejections issued between April 11, 2016 and January  
21 10, 2018. In U.S. App. No. 13/865,026, the '821 Pub was cited as prior art pertinent to VMware's  
22 application on April 12, 2018.

23  
24

[remainder of page intentionally left blank]

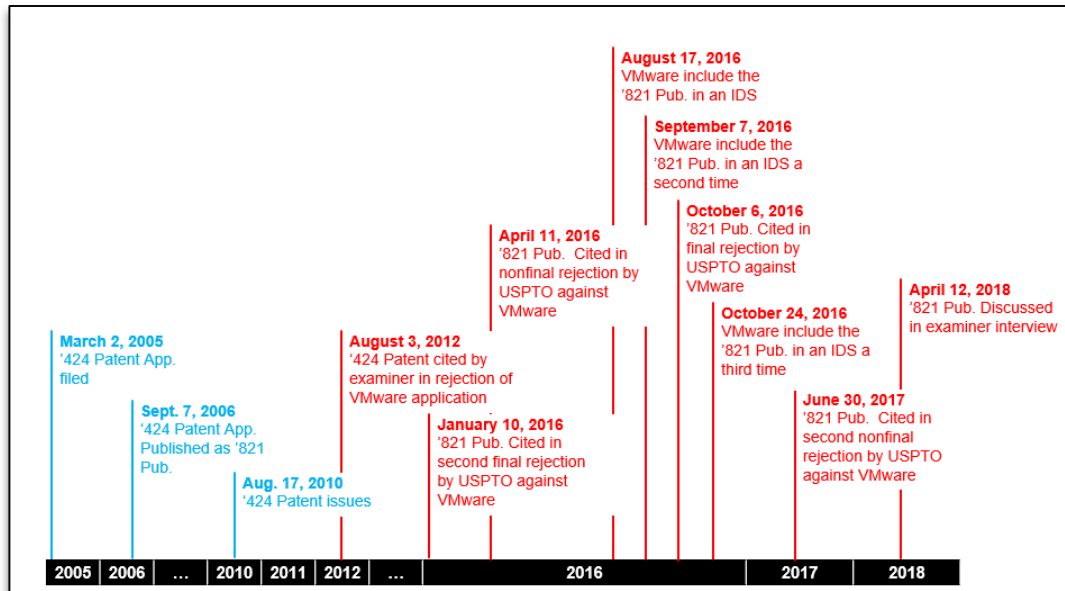

Figure 10. Timeline showing Broadcom's knowledge of the '424 Patent with activities related to '424 Patent in blue and activities related to Broadcom's knowledge of the '424 Patent in red.

83. Thus, VMware had knowledge of the '424 Patent since 2012.

84. VMware's knowledge—including its knowledge of the Asserted Patents—can be imputed to Broadcom as Broadcom stands in VMware's shoes by virtue of the Transaction.

85. Further, VMware's knowledge can be imputed to Broadcom because VMware's employees merged with, were acquired by, and went to work for Broadcom, including employees with knowledge of the prosecution histories of the VMware's patents. For example, the Senior Intellectual Property Counsel for VMware from August 2013 to November 2023 worked for Broadcom in the same role. As Senior IP Counsel for VMware, this person would have overseen and been responsible for VMware's patent portfolio and their prosecution and brings this knowledge to Broadcom.

86. Broadcom also has its own direct knowledge of the Asserted Patents.

87. Broadcom would have engaged in an extensive review of VMware's patents, including their prosecution histories, as part of the detailed due diligence necessary for the Broadcom-VMware merger, *i.e.*, before November 2023. For example, Broadcom's 2023 annual report states that Broadcom focuses its "research and development resources to . . . leverage our extensive portfolio of U.S. and other patents, and other intellectual property" because its "success

1 depends in part upon [its] ability to protect [its] IP,” including its patents.<sup>69</sup> Hock Tan, CEO of  
2 Broadcom, stated pre-merger that “VMware will complement Broadcom’s more than 60-year focus  
3 on innovation, intellectual property, and R&D know-how.”<sup>70</sup>

4 88. Broadcom and VMware, jointly and severally, have actively induced infringement  
5 of at least Claim 1 of the ’424 Patent in violation of at least 35 U.S.C. § 271(b). Users of the ’424  
6 Accused Products directly infringe at least Claim 1 of the ’424 Patent when they use the ’424  
7 Accused Products in the ordinary, customary, and intended way. Broadcom and VMware’s  
8 inducement includes, without limitation and with specific intent to encourage the infringement,  
9 knowingly inducing consumers to use the ’424 Accused Products within the United States in the  
10 ordinary, customary, and intended way by, directly or through intermediaries, supplying the ’424  
11 Accused Products to consumers within the United States and instructing and encouraging such  
12 customers to use the ’424 Accused Products in the ordinary, customary, and intended way, which  
13 Broadcom and VMware know or should know infringes at least Claim 1 of the ’424 Patent.

14 89. For example, in some cases, Broadcom and VMware sell the ’424 Accused Products  
15 to their customers as software for installation on customer computer(s). Whenever customers install  
16 the ’424 Accused Products and run a virtual machine, at least Claim 1 of the ’424 Patent is  
17 performed. In at least this way, the customers of Broadcom and VMware directly infringe the ’424  
18 Patent *while* Broadcom and VMware know of the ’424 Patent, or should know that these activities  
19 infringe the ’424 Patent, and specifically intends and instructs for their customers to infringe.  
20 Broadcom and VMware have provided and continue to provide these instructions to infringe despite  
21 knowing of the ’424 Patent and knowing or being willfully blind to the fact these activities infringe  
22 the ’424 Patent.

23 90. By way of example, Broadcom and VMware’s instructions to their customers to  
24 infringe are made at least through their creation and distribution of marketing, promotional, and  
25 instructional materials. The promotional and product literature for the Accused Products is designed

26  
27 <sup>69</sup> Broadcom SEC Form 10-K for fiscal year ending on October 29, 2023, available at  
<https://investors.broadcom.com/static-files/2b98b262-4fbb-4731-b3dd-88f6ca187002>.

28 <sup>70</sup> “Keeping customers at the center of everything,” Broadcom.com (February 08,  
2023), <https://www.broadcom.com/blog/keeping-customers-at-the-center-of-everything>.

1 to instruct, encourage, enable, and facilitate the user of the '424 Accused Products to use the '424  
 2 Accused Products in a manner that directly infringes the '424 Patent. And Broadcom and VMware  
 3 provide instructions, support, and technical assistance to their customers in support of committing  
 4 the infringement.

5 91. One nonlimiting example of Broadcom and VMware's inducement includes at least  
 6 VMware Hands-on Labs for vSphere-based products.

7 92. On the official VMware YouTube page, Broadcom and VMware explain that  
 8 VMware Hands-On Labs "delivers a real virtualized infrastructure in the cloud powered by  
 9 VMware" to let customers "try out products from the convenience of [their] browser."<sup>71</sup> Broadcom  
 10 and VMware further explain that "each self-paced lab is guided with a manual and built in modules  
 11 so you can take all or just part of a lab and come and go from labs as often as you like."<sup>72</sup>

21 *Figure 11. Screenshot from VMware YouTube video titled "What are VMware Hands-on Labs?,"*  
 22 *showing VMware Hands-on Lab Environment highlighted with in-lab manual highlighted in red.*

23 93. Broadcom and VMware offer VMware Hands-on Labs directly related to use of the  
 24 vSphere functionality that infringes the '424 Patent. For example, Broadcom and VMware offer a  
 25 VMware Hands-on Lab on "vSphere Performance Optimization."

27 <sup>71</sup> "What are VMware Hands-on Labs," VMware YouTube Channel, YouTube.com (June 25,  
 28 2014), [https://www.youtube.com/watch?v=XggYeVsK\\_R0](https://www.youtube.com/watch?v=XggYeVsK_R0), 0:25-32.

<sup>72</sup> *Id.*, 0:34-42.

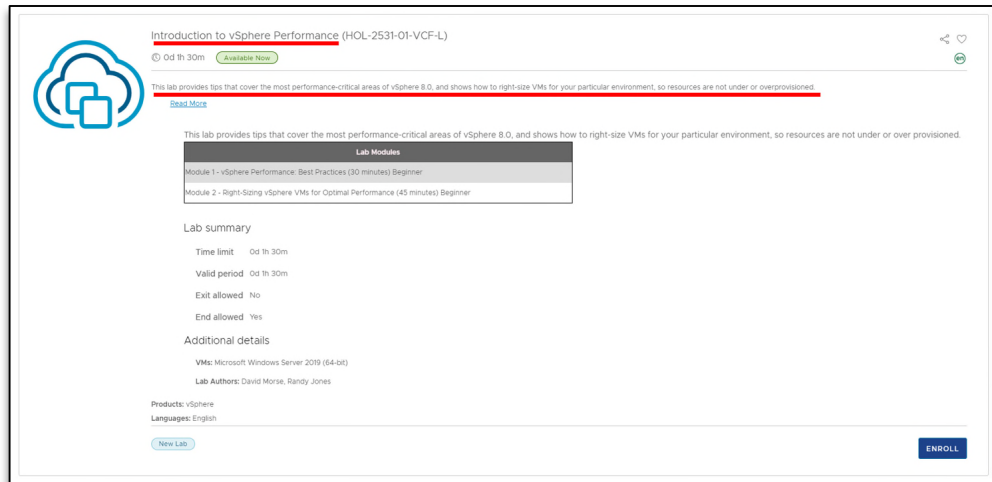

Figure 12. VMware Hands-on Lab course catalog entry showing Hands-on Lab titled “Introduction to vSphere Performance.”<sup>73</sup>

Figure 13. VMware Hands-on Lab course showing manual discussing instructions specific to CPU Performance in vSphere.

94. Broadcom and VMware thus encourage their customers to infringe the '424 Patent at least by instructing customers on how to infringe by providing “manuals and built in modules” in proximity to “actual VMware products” for customers to practice infringing conduct through the VMware Hands-on Labs.

[remainder of page intentionally left blank]

<sup>73</sup> “Catalog,” VMware Hands-on Labs, <https://labs.hol.vmware.com/HOL/catalog>.  
COMPLAINT

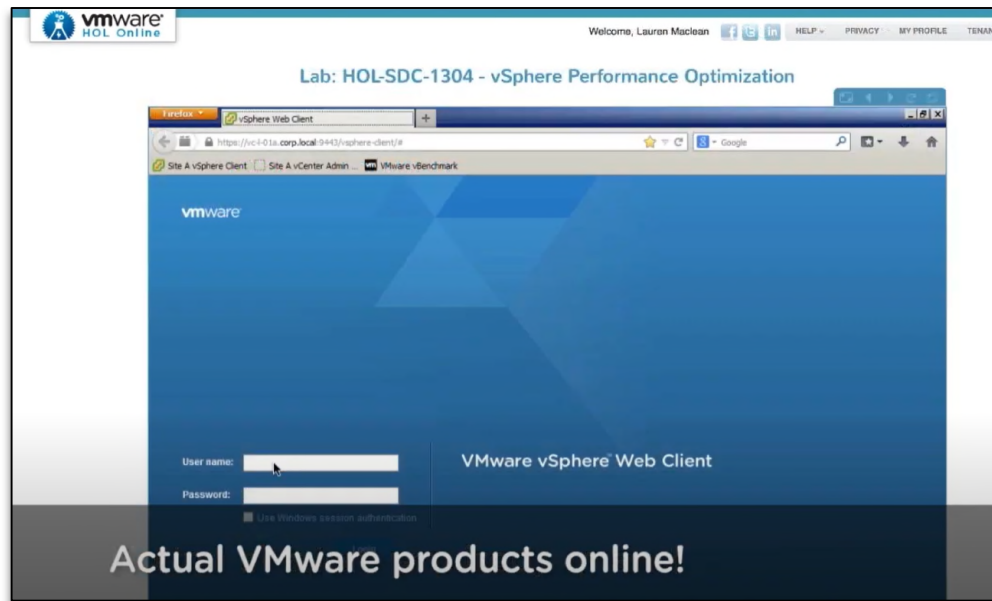

Figure 14. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?”

95. Besides the VMware Hand-on Labs example discussed above, Broadcom and VMware publicly share numerous instructions, troubleshooting manuals, and product documentations through Broadcom’s support portal (<https://support.broadcom.com/>) and at <https://docs.vmware.com/en/VMware-vSphere/index.html>.

96. Like the Hands-on Labs discussed above, these support documents also provide step-by-step instructions explaining how to use the ’424 Accused Products in an infringing manner.

97. Thus, Broadcom and VMware have induced their customers to infringe the ’424 Patent. Broadcom and VMware’s knowing inducement of their customers to infringe has caused and continues to cause damage to Netflix, and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware’s wrongful acts in an amount subject to proof at trial.

#### **INDIRECT INFRINGEMENT: CONTRIBUTORY INFRINGEMENT**

98. Broadcom and VMware have actively contributed to infringement of at least Claim 1 of the ’424 Patent in violation of at least 35 U.S.C. § 271(c). Broadcom and VMware sell the ’424 Accused Products, which are software specially made or especially adapted to practice the method claimed in at least Claim 1 of the ’424 Patent.

99. The infringing components of the ’424 Accused Products have no substantial function or use other than to practice the invention claimed in at least Claim 1 of the ’424 Patent at least because infringement of the claimed method is performed automatically when customers start

1 a virtual machine using the '424 Accused Products installed on a computer system.

2 100. The '424 Accused Products include material components of the claimed method  
3 recited in at least Claim 1 of the '424 Patent and are not a staple article or commodity of commerce,  
4 including because they are specifically configured to infringe according to at least Claim 1 of the  
5 '424 Patent (*see, e.g.*, ¶¶ 54-78).

6 101. Broadcom and VMware's contributory infringements include, without limitation,  
7 making, offering to sell, and/or selling within the United States, and/or importing into the United  
8 States, the '424 Accused Products, which each include one or more components for use in practicing  
9 at least Claim 1 of the '424 Patent, knowing the component to be especially made or especially  
10 adapted for use in an infringement of at least Claim 1 of the '424 Patent (*see, e.g.*, ¶¶ 54-99), and  
11 not a staple article or commodity of commerce suitable for substantial non-infringing use.

12 **WILLFUL INFRINGEMENT**

13 102. Broadcom and VMware's infringement of the '424 Patent has been and is willful and  
14 deliberate.

15 103. As discussed above, VMware had actual knowledge of the '424 Patent since August  
16 3, 2012. VMware's knowledge is imputed to Broadcom by virtue of the Transaction and for the  
17 reasons set forth above.

18 104. Broadcom also obtained its own direct knowledge of the '424 Patent through pre-  
19 merger due diligence and by acquiring VMware employees with knowledge, *supra*.

20 105. As discussed above, Broadcom knew or should have known that its actions infringe  
21 and actively induce infringement of the '424 Patent.

22 106. As discussed above, Broadcom specifically intended that both itself and/or its  
23 customers infringe the '424 Patent.

24 107. Further, VMware marked accused functionality with patents whose prosecution  
25 contains citations to or objections based on the Asserted Patents. That is, many of VMware's patent  
26 applications that contain citations to or rejections based on the Asserted Patents, were later, after  
27 issuance, used to mark infringing functionality. Broadcom appears to have removed VMware's  
28 virtual marking URL but, upon information and belief, Broadcom did so to review VMware's virtual

1 marking and can be imputed with knowledge thereof. Thus, Broadcom understands that the Asserted  
2 Patents cited in VMware's prosecution histories overlap with the functionality in the '424 Accused  
3 Products or is willfully blind to that fact. Given the close relationship between the subject of the  
4 Patents-in-Suit and the '424 Accused Products, including that VMware marked accused  
5 functionality with patents that were objected to during prosecution based on the Asserted Patents,  
6 Broadcom knew or should have known of the substantial risk of infringement through use of their  
7 products.

8 108. Broadcom and VMware's willfulness is further evidenced by VMware's  
9 demonstrated culture of knowingly using patented technology.<sup>74</sup> Copying other people's patents is  
10 circumstantial evidence of willful infringement and it appears the Accused Products are copies of  
11 the Asserted Patents. Further, VMware's former CEO, who served in that role for ten (10) years,  
12 from October 2013 to December 2023, allegedly testified in deposition that VMware has a culture  
13 of copying.<sup>75</sup> Upon information and belief, Broadcom continues VMware's culture of copying  
14 today.

15 109. Broadcom and VMware's willfulness is further evidenced by VMware's culture of  
16 willful blindness toward patents, including intentionally not reviewing third-party patents when any  
17 rational actor would understand—based on, for example, the application rejections in VMware's  
18 patent applications—that a substantial risk of infringement exists.<sup>76</sup> Upon information and belief,  
19 Broadcom continues that culture today.

20 110. In fact, two separate juries have found VMware committed willful infringement, in  
21 part, because of VMware's culture of copying and refusing to review third-party patents during a  
22 time period relevant to this matter.<sup>77</sup> Indeed, the Accused Product in those matters is the same  
23 Accused Product here, demonstrating a pattern and practice of copying and willful blindness as to  
24 infringement when it comes to the Accused Product, vSphere, during the time at-issue here. Upon

25 <sup>74</sup> See, e.g., *Cirba Inc. (d/b/a Densify) v. VMware, Inc.*, Case No. 1:19-cv-00742-GBW (“*Cirba*”),  
26 ECF 1528; 1:19-cv-00742-GBW ECF 1848.

27 <sup>75</sup> *Cirba*, 1:19-cv-00742-GBW ECF 1529, 1531.

28 <sup>76</sup> See, e.g., *Cirba*, ECF Nos. 1529, ECF 1531, ECF 1848.

<sup>77</sup> *Cirba Inc. (d/b/a Densify) v. VMware, Inc.*, Case No. 1:19-cv-00742-GBW, ECF Nos. 577,  
1785.

1 information and belief, Broadcom continues the pattern and practice of willful infringement today.

2 111. Thus, Broadcom and VMware have willfully infringed the '424 Patent. Broadcom  
3 and VMware's knowing and willful infringement has caused and continues to cause damage to  
4 Netflix, and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware's  
5 wrongful acts in an amount subject to proof at trial.

6 **SECOND CLAIM FOR RELIEF**

7 **Infringement of U.S. Patent No. 7,797,707 (the "707 Patent")**

8 ***Against Broadcom and VMware***

9 112. Netflix incorporates by reference paragraph nos. 1-111, *supra*.

10 113. Broadcom and VMware have infringed, and continues to infringe, at least Claim 1  
11 of the '707 Patent, either literally or under the doctrine of equivalents, by making, using, selling,  
12 and/or offering for sale within the United States and/or importing into the United States products  
13 that are covered by at least Claim 1 of the '707 Patent. These products include, but are not limited  
14 to VMware vSphere Foundation, VMware Cloud Foundation, VMware Cloud on AWS, Azure  
15 VMware Solution, Google Cloud VMware Engine, Oracle Cloud VMware Solution, IBM Cloud for  
16 VMware Solutions, Alibaba Cloud VMware Service, as well as any other vSphere-based products  
17 and/or services (collectively, the "707 Accused Products").

18 114. Claim 1 of the '707 Patent recites:

19 A method comprising:

20 observing, in a computer, communication from a virtual  
21 machine (VM) to a domain in which a device driver for a shared  
22 resource resides, wherein the domain is separate from a virtual  
23 machine monitor (VMM);

24 determining, in the computer and based on said  
25 communication, CPU utilization of said domain attributable to said  
26 VM;

27 determining, for the VM, CPU utilization allocated by a  
28 scheduler to the VM; and

determining, for the VM, total CPU utilization attributable to the VM by summing the determined CPU utilization allocated to the VM by the scheduler and the determined CPU utilization of the domain attributable to the VM.

115. The '707 Accused Products perform a method comprising “observing, in a computer, communication from a virtual machine (VM) to a domain in which a device driver for a shared resource resides, wherein the domain is separate from a virtual machine monitor (VMM).”

116. Broadcom and VMware’s vSphere products allow VMs to share CPU, storage, and networking resources. For example, vSphere, is described by Broadcom and VMware as a “virtualization platform, which transforms data centers into aggregated computing infrastructures that include CPU, storage, and networking resources.”<sup>78</sup>

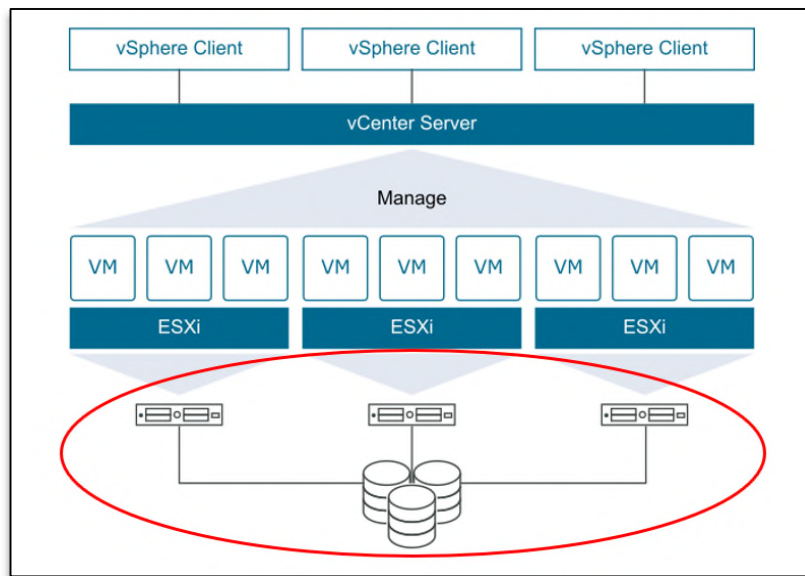

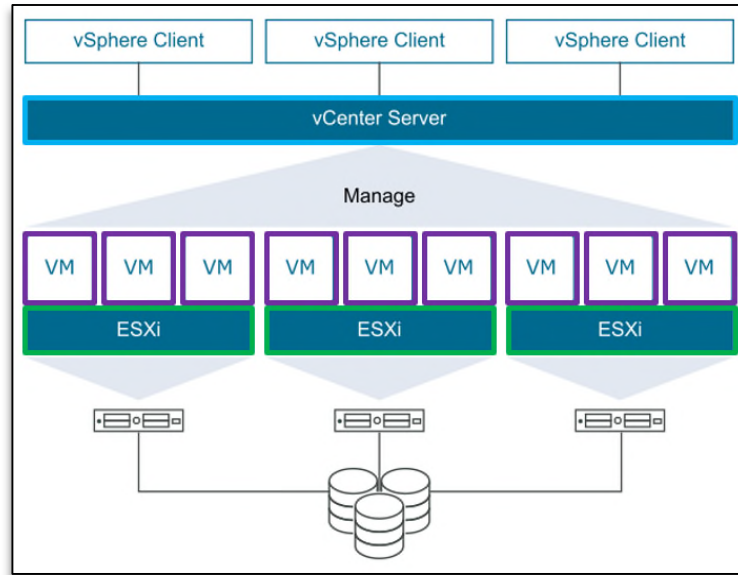

Figure 15. Annotated vSphere architecture diagram with the shared CPU, storage, and networking resources circled in red.

117. Broadcom and VMware describe that “the two core components of vSphere are ESXi and vCenter Server.”<sup>79</sup> ESXi creates and runs virtual machines while vCenter Server allows for managing multiple “hosts”—individual computers running ESXi—and pooling resources between

<sup>78</sup> “VMware vSphere Documentation,” VMware.com (captured December 4, 2022), <https://web.archive.org/web/20221204141132/https://docs.vmware.com/en/VMware-vSphere/index.html>.

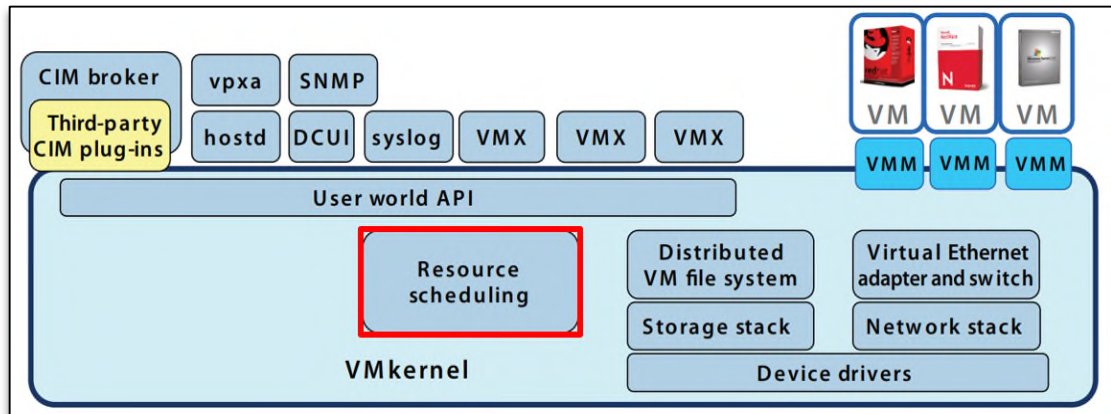

<sup>79</sup> *Id.*

1 those hosts.<sup>80</sup> As shown, each host runs an instance of ESXi which in turn runs multiple VMs.  
 2 vCenter Server manages the multiple instances of ESXi and interacts with the vSphere Client.

3  
4

9  
10  
11  
12 *Figure 16. Annotated vSphere architecture diagram with ESXi instances in green, vCenter Server*  
 13 *in blue, and individual VMs in purple.*

14 118. Within ESXi is an “underlying operating system, called VMkernel.”<sup>81</sup> VMkernel  
 15 provides “[r]esource scheduling” functionality for ESXi. VMkernel interfaces with hardware to  
 16 deliver the shared CPU, storage, and network resources from the host to specific virtual machines.<sup>82</sup>

17  
18

21  
22  
23 *Figure 17. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with*  
 24 *“Resource Scheduling” highlighted in red.*

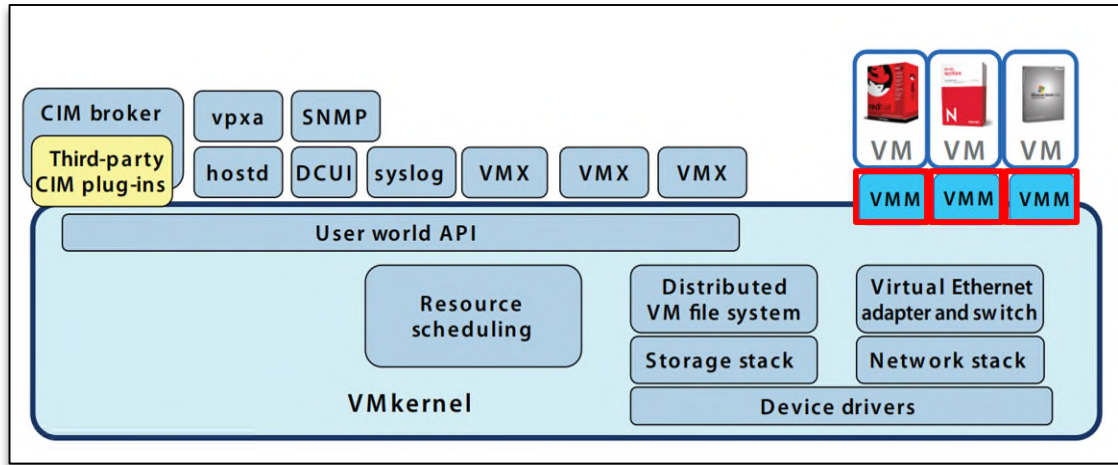

25 119. Each virtual machine communicates with the VMkernel through a process running

26 <sup>80</sup> *Id.*

27 <sup>81</sup> “The Architecture of VMware ESXi,” VMware.com (captured December 9, 2008),  
 28 [https://web.archive.org/web/20081209120933/http://www.vmware.com/files/pdf/ESXi\\_architecture.pdf](https://web.archive.org/web/20081209120933/http://www.vmware.com/files/pdf/ESXi_architecture.pdf).

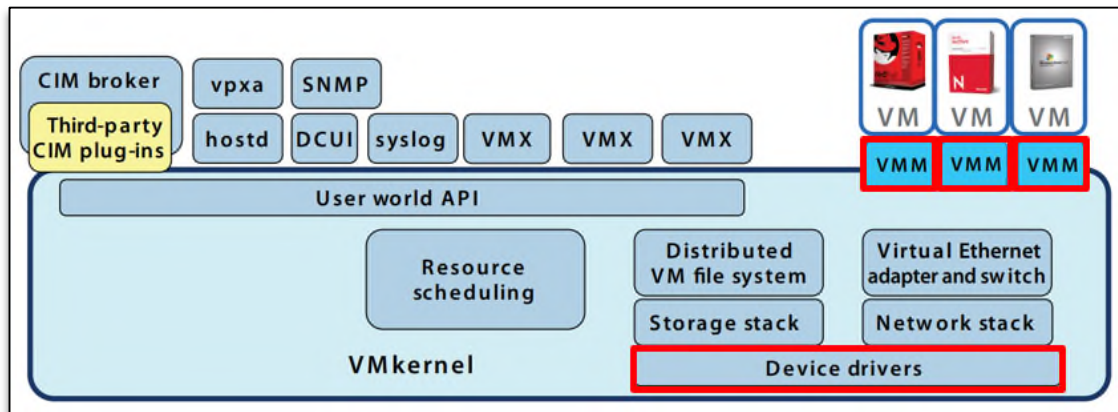

<sup>82</sup> *Id.*

1 on top of the VMkernel called a virtual machine monitor (“VMM”). This communication includes  
 2 VM requests for host resources—indeed, VMkernel “has control of all hardware devices on the  
 3 [host], and manages resources for the applications.”<sup>83</sup>

4  
5  
6  
7  
8  
9  
10  
11 *Figure 18. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with VMMs*  
 12 *highlighted in red.*

13 120. The VMMs are separate from the VMkernel and device drivers. Specifically, the  
 14 VMM is one of the “main processes that run[s] on top of VMkernel.”<sup>84</sup>

15  
16  
17  
18  
19  
20  
21 *Figure 19. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with VMMs*  
 22 *and device drivers highlighted to show their separation with respect to the VMkernel.*

23 121. The VMkernel includes the device drivers for the shared resources.

24  
25 [remainder of page intentionally left blank]  
26  
27

28 <sup>83</sup> *Id.*

<sup>84</sup> *Id.*

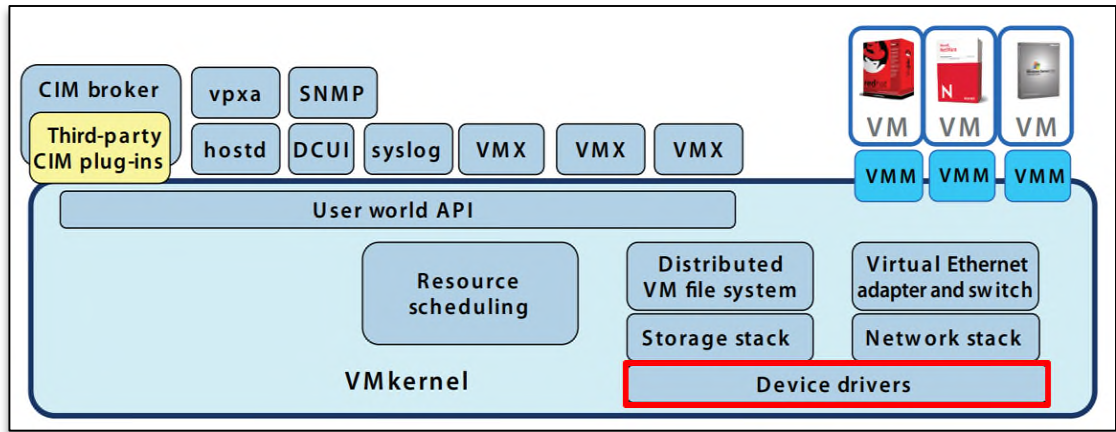

Figure 20. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper showing location of device drivers in the VMkernel using red highlighting.

122. The “Common Information Model (CIM) system” is another process that runs on top of VMkernel.<sup>85</sup> This system is described as “enabl[ing] a framework for agentless, standards-based monitoring of hardware resources for ESXi.”<sup>86</sup> The CIM system consist of “a CIM object manager, often called a CIM broker, and a set of CIM providers.”<sup>87</sup> Specifically, “VMware [] writes providers that implement monitoring of server hardware, ESX/ESXi storage infrastructure, and virtualization-specific resources” and “these providers run inside the ESXi system.”<sup>88</sup>

123. The ’707 Accused Products perform the step of “determining, in the computer and based on said communication, CPU utilization of said domain attributable to said VM.”

124. For example, vSphere includes a “statistics subsystem [which] collects data on the resource usage of inventory objects.”<sup>89</sup> The product literature explains:

[H]osts use data counters to query for statistics. A data counter is a unit of information relevant to a given inventory object or device. Each counter collects data for a different statistic in a metric group. For example, the disk metric group includes separate data counters to collect data for disk read rate, disk write rate, and disk usage. Statistics for each counter are rolled up after a specified collection interval.<sup>90</sup>

<sup>85</sup> *Id.*

<sup>86</sup> *Id.*

<sup>89</sup> “vSphere Monitoring and Performance,” VMware.com (copyright 2010-2021), <https://docs.vmware.com/en/VMware-vSphere/7.0/vsphere-esxi-vcenter-server-703-monitoring-performance-guide.pdf>.

<sup>90</sup> *Id.*

1 125. For example, one calculated metric, %SYS, is the “[p]ercentage of time spent in the  
2 ESXi VMkernel on behalf of the . . . virtual machine . . . to process interrupts and to perform other  
3 system activities.”

4 126. The ’707 Accused Products perform the step of “determining, for the VM, CPU  
5 utilization allocated by a scheduler to the VM.”

6 127. For example, another calculated metric, %RUN, is the percentage of total CPU time  
7 scheduled.<sup>91</sup>

8 128. The ’707 Accused Products perform the step of “determining, for the VM, total CPU  
9 utilization attributable to the VM by summing the determined CPU utilization allocated to the VM  
10 by the scheduler and the determined CPU utilization of the domain attributable to the VM.”<sup>92</sup>

11 129. For example, the CPU panel displays “server-wide statistics as well as statistics for  
12 . . . virtual machine CPU utilization.”<sup>93</sup> One of these statistics, %USED, reflects the percentage of  
13 physical CPU core cycles used and may be calculated for specific virtual machines.<sup>94</sup>

14 130. %USED is calculated using the following formula (summation highlighted in red):

$$15 \quad \%USED = \%RUN + \%SYS - \%OVRLP$$

16 131. Accordingly, the ’707 Accused Products perform all steps of Claim 1 of the ’707  
17 Patent.

### 18 DIRECT INFRINGEMENT

19 132. Broadcom and VMware directly infringe the ’707 Patent in multiple ways.

20 133. Broadcom and VMware directly infringe the ’707 Patent when they perform the  
21 claimed methods of the ’707 Patent, in violation of at least 35 U.S.C. § 271(a), by providing the  
22 ’707 Accused Products as a service.

<sup>93</sup> *Id.*

<sup>94</sup> *Id.*

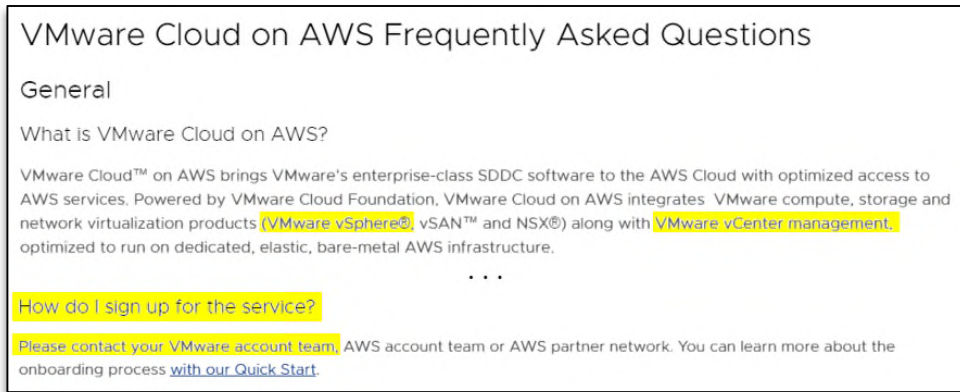

Figure 21. Annotated screenshot from VMware Cloud Tech Zone FAQ page explaining the VMware Cloud on AWS Service and how to sign up.

134. When a customer signs up for and uses a vSphere cloud-based service (e.g., VMware Cloud on AWS), Broadcom and VMware perform the claimed methods as discussed above by controlling and maintaining responsibility for the infringing functionality. Alternatively, Broadcom and VMware condition the benefit of the '707 Accused Products on Broadcom and VMware's partners performing the infringing functionality and Broadcom and VMware's control the manner and timing of said performance.

135. For example, Broadcom and VMware maintain a "Shared Responsibility Model" that is "common among the different VMware Cloud Providers" and "defines distinct roles and responsibilities between the VMware Cloud Infrastructure Services provider and an organization consuming the service."<sup>95</sup> As shown below, Broadcom and VMware maintain responsibility for the "vSphere Lifecycle." As further confirmation, when describing the AWS implementation, Broadcom and VMware describe one of the goals of the shared responsibility model as being to "[p]rotect VMware-managed objects" including "management appliances" and "hosts."<sup>96</sup> The "management appliances" and "hosts" execute code performing the steps of Claim 1 described above.

<sup>95</sup> "VMware Cloud Well-Architected Framework for VMware Cloud on AWS," VMware.com (copyright 2023), <https://docs.vmware.com/en/VMware-Cloud-Well-Architected-Framework/services/vmcwaf-aws.pdf>.

<sup>96</sup> "VMware Cloud on AWS: vCenter Architecture," VMware.com (copyright 2005-2024), <https://vmc.techzone.vmware.com/vmc-arch/docs/compute/vmc-aws-vcenter-architecture#sec27179-sub1>.

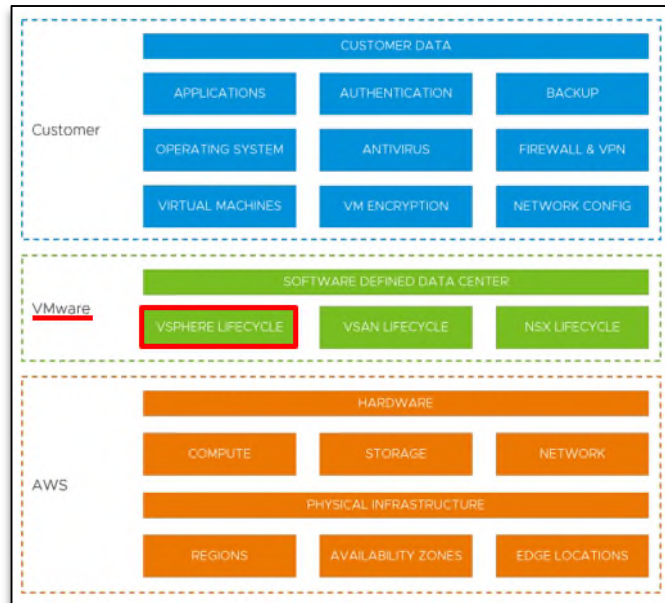

Figure 22. Annotated diagram from the “VMware Cloud Well-Architected Framework for VMware Cloud on AWS” document splitting responsibility between the customer, VMware, and AWS and showing vSphere as a responsibility of VMware highlighted in red.

136. Broadcom and VMware also directly infringe by using the claimed method to demonstrate, test, install, and configure the ’707 Accused Products for their customers. For example, Broadcom and VMware directly infringe by using the ’707 Accused Products for demonstrating via VMware Hands-on Labs, *infra*.

### INDIRECT INFRINGEMENT: INDUCEMENT

137. Broadcom and VMware have had knowledge of the ’707 Patent since at least August 3, 2012, when the ’424 Patent was cited by an examiner at the United States Patent and Trademark Office (“USPTO”) during a rejection of VMware Inc.’s application that ultimately issued as U.S. Patent No. 8,650,564. The ’424 Patent incorporates by reference U.S. Patent Application Nos. 11/070,602 and 11/070,605, and the ’707 Patent issued from Application No. 11/070,605. Accordingly, once VMware had knowledge of the ’424 Patent on August 3, 2012, it also had, or recklessly disregarded knowledge of, the ’707 Patent.<sup>97</sup>

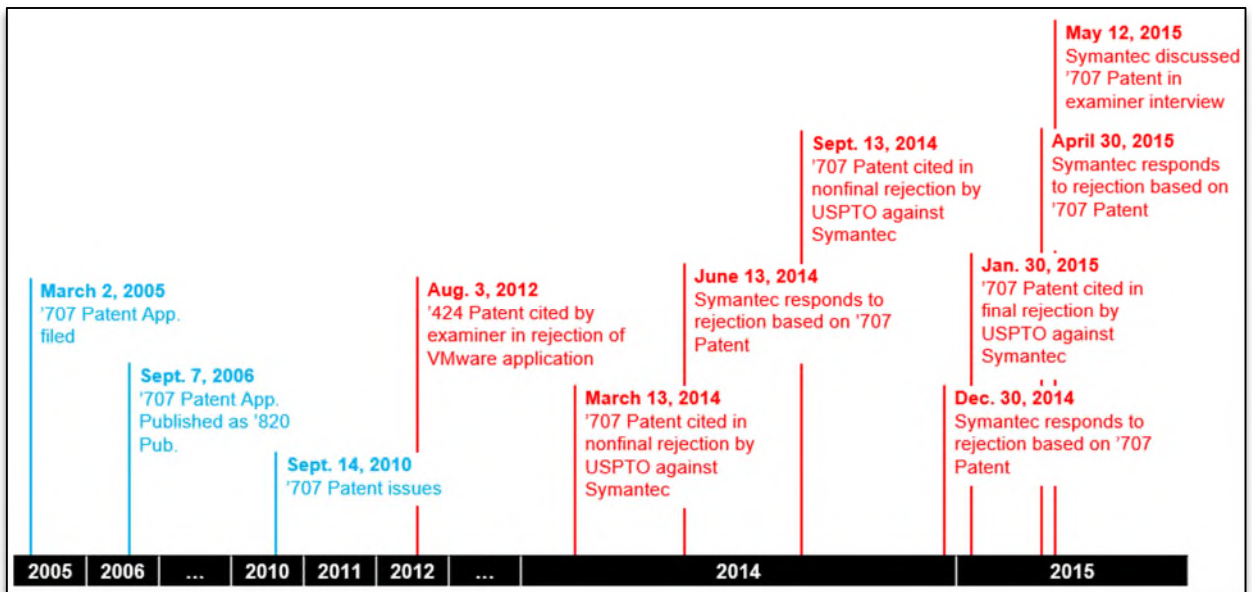

138. Further, the USPTO identified and relied upon the ’707 Patent to reject the claims in

<sup>97</sup> The ’707 Patent has similar disclosures identifying the ’891 Patent, discussed below, and the ’424 Patent, while the ’891 Patent has similar disclosures identifying the ’424 and ’707 Patents. Thus, the USPTO’s and Broadcom’s references to any one of these three patents—the ’424, ’707, and ’891 Patents—are further evidence that VMware had, or should have had, knowledge of the other two patents.

1 a Symantec patent application for the patent that ultimately issued as U.S. Patent No. 9,143,410.  
 2 Broadcom acquired Symantec on November 4, 2019, and Symantec’s knowledge of the ’707 Patent  
 3 is therefore imputed to Broadcom. Additionally, Broadcom would have obtained knowledge of  
 4 Symantec’s patents prosecutions during the pre-sale due diligence process.

5 139. Further, VMware was provided with knowledge of the ’707 Patent when the  
 6 USPTO’s rejected—on March 13, 2014, on September 30, 2014, and again on January 30, 2015—  
 7 Symantec’s patent application as unpatentable over the ’707 Patent. Symantec’s responses on June  
 8 13, 2014, December 30, 2014, and April 30, 2015 to the USPTO’s rejections, including  
 9 substantively discussing and amending over the ’707 Patent, and Symantec’s discussion of the ’707  
 10 Patent with the USPTO during an examiner interview on May 15, 2015 are further evidence of  
 11 Symantec’s, and by extension, Broadcom’s knowledge of the ’707 Patent.

12 140. VMware was also reminded of the ’707 Patent when the USPTO listed the  
 13 publication corresponding to the ’707 Patent in a notice of references cited on July 29, 2019 during  
 14 prosecution of VMware’s application that issued as U.S. Patent No. 10,628,330.

24 *Figure 23. Timeline showing Broadcom’s knowledge of the ’707 Patent with activities related to*  
 25 *’707 Patent in blue and activities related to Broadcom’s knowledge in red.*

26 141. VMware’s knowledge of the Asserted Patents, including the ’707 Patent, can be  
 27 imputed to Broadcom for the reasons stated above, ¶¶ 84-85, incorporated by reference herein.

28 142. Broadcom’s direct knowledge of the Asserted Patents, including the ’707 Patent, is

1 detailed above, ¶¶ 86-87, incorporated by reference herein.

2 143. Broadcom and VMware have actively induced infringement of at least Claim 1 of  
3 the '707 Patent in violation of at least 35 U.S.C. § 271(b). Users of the '707 Accused Products  
4 directly infringe at least Claim 1 of the '707 Patent when they use the '707 Accused Products in the  
5 ordinary, customary, and intended way. Broadcom and VMware's inducements include, without  
6 limitation and with specific intent to encourage the infringement, knowingly inducing consumers to  
7 use the '707 Accused Products within the United States in the ordinary, customary, and intended  
8 way by, directly or through intermediaries, supplying the '707 Accused Products to consumers  
9 within the United States and instructing and encouraging such customers to use the '707 Accused  
10 Products in the ordinary, customary, and intended way, which Broadcom and VMware know or  
11 should know infringes at least Claim 1 of the '707 Patent.

12 144. Broadcom and VMware sell the '707 Accused Products to their customers as  
13 software for installation on customer computer(s). When Broadcom and VMware's customers  
14 install the '707 Accused Products and run a virtual machine, at least Claim 1 of the '707 Patent is  
15 performed. In at least this way, the customers of Broadcom and VMware directly infringe the '707  
16 Patent *while* Broadcom and VMware know of the '707 Patent, know or should know that these  
17 activities infringe the '707 Patent, and specifically intend and instruct for their customers to infringe.  
18 Broadcom and VMware have provided and continue to provide these instructions to infringe despite  
19 knowing of the '707 Patent and knowing or being willfully blind to the fact these activities infringe  
20 the '707 Patent.

21 145. By way of example, Broadcom and VMware's instructions to their customers to  
22 infringe are made at least through their creation and distribution of marketing, promotional, and  
23 instructional materials. The promotional and product literature for the Accused Products is designed  
24 to instruct, encourage, enable, and facilitate the user of the '707 Accused Products to use the '707  
25 Accused Products in a manner that directly infringes the '707 Patent. And Broadcom and VMware  
26 provide instructions, support, and technical assistance to their customers in support of committing  
27 the infringement.

28 146. One nonlimiting example of Broadcom and VMware's inducement includes at least

1 VMware Hands-on Labs for vSphere-based products.

2 147. On Broadcom and VMware’s official VMware YouTube page, Broadcom and  
 3 VMware explain that VMware Hands-On Labs “delivers a real virtualized infrastructure in the cloud  
 4 powered by VMware” to let customers “try out products from the convenience of [their] browser.”<sup>98</sup>  
 5 Broadcom and VMware further explain that “each self-paced lab is guided with a manual and built  
 6 in modules so you can take all or just part of a lab and come and go from labs as often as you like.”<sup>99</sup>

15 *Figure 24. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?,”*  
 16 *showing VMware Hands-on Lab Environment highlighted with in-lab manual highlighted in red.*

17 148. Broadcom and VMware offer VMware Hands-on Labs directly related to use of the  
 18 vSphere functionality that infringes the ’707 Patent. For example, Broadcom and VMware offer a  
 19 VMware Hands-on Lab on “vSphere Performance Optimization.”

20  
21

23  
24  
25  
26

27 <sup>98</sup> “What are VMware Hands-on Labs,” VMware YouTube Channel, YouTube.com (June 25,  
 28 2014), [https://www.youtube.com/watch?v=XggYeVsK\\_R0](https://www.youtube.com/watch?v=XggYeVsK_R0), 0:25-32.

<sup>99</sup> *Id.*, 0:34-42.

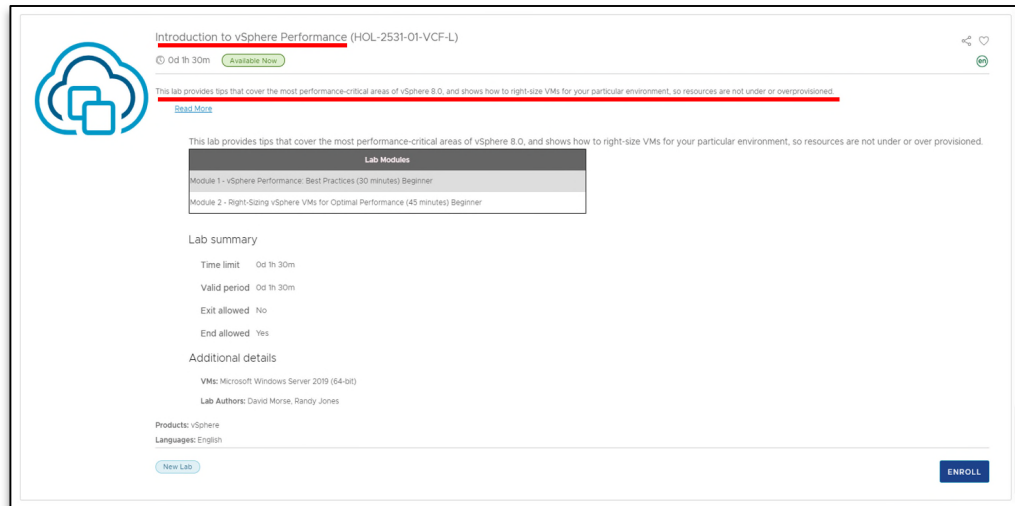

Figure 25. VMware Hands-on Lab course catalog entry showing Hands-on Lab titled “Introduction to vSphere Performance.”<sup>100</sup>

Figure 26. VMware Hands-on Lab course showing manual discussing instructions specific to CPU Performance in vSphere.

149. Broadcom and VMware thus encourage their customers to infringe the '707 Patent at least by instructing customers on how to infringe by providing “manuals and built in modules” in proximity to “actual VMware products” for customers to practice infringing conduct through their VMware Hands-on Labs.

[remainder of page intentionally left blank]

<sup>100</sup> “Catalog,” VMware Hands-on Labs, <https://labs.hol.vmware.com/HOL/catalog>.

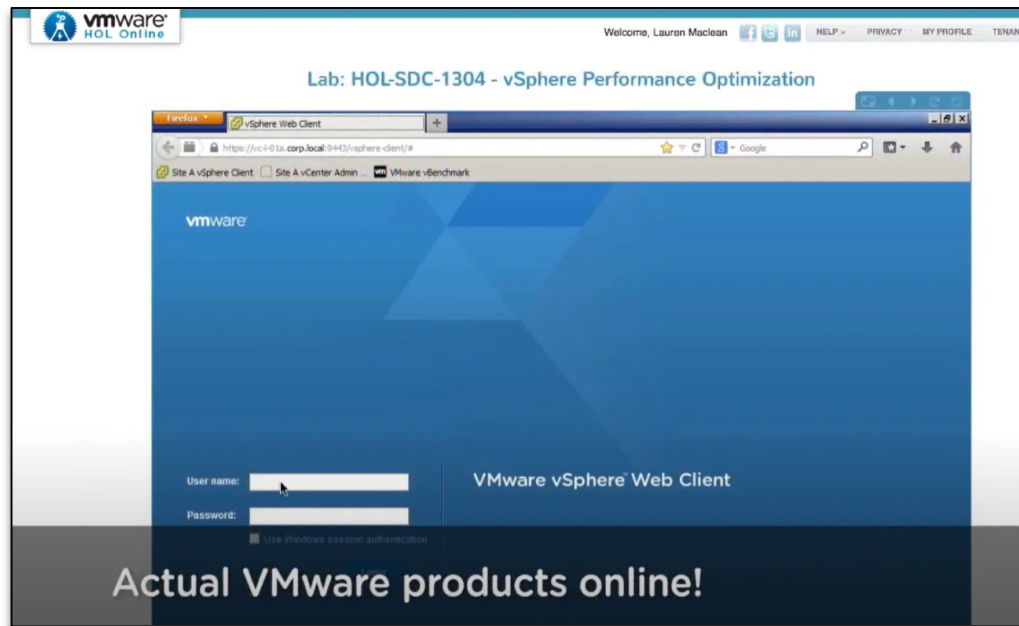

Figure 27. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?”

150. Besides the VMware Hand-on Labs discussed above, Broadcom and VMware publicly share numerous instructions, troubleshooting manuals, and product documentations through Broadcom’s support portal (<https://support.broadcom.com/>) and at <https://docs.vmware.com/en/VMware-vSphere/index.html>.

151. Like the Hands-on Labs discussed above, these support documents also provide step-by-step instructions explaining how to use the ’707 Accused Products in an infringing manner to determine performance metrics such as CPU utilization.

152. Thus, Broadcom and VMware have induced their customers to infringe the ’707 Patent. Broadcom and VMware’s knowing inducement of their customers to infringe has caused and continues to cause damage to Netflix, and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware’s wrongful acts in an amount subject to proof at trial.

### INDIRECT INFRINGEMENT: CONTRIBUTORY INFRINGEMENT

153. Broadcom and VMware have actively contributed to infringement of at least Claim 1 of the ’707 Patent in violation of at least 35 U.S.C. § 271(c). Broadcom and VMware sell the ’707 Accused Products, which are software specially made or especially adapted to practice the method claimed in at least Claim 1 of the ’707 Patent.

154. The infringing components of the ’707 Accused Products have no substantial

1 function or use other than to practice the invention claimed in at least Claim 1 of the '707 Patent at  
2 least because infringement of the claimed method is performed automatically when customers start  
3 a virtual machine using the '707 Accused Products installed on a computer system.

4 155. The '707 Accused Products are material components of the claimed method recited  
5 in at least Claim 1 of the '707 Patent and are not a staple article or commodity of commerce,  
6 including because they are specifically configured to infringe according to at least Claim 1 of the  
7 '707 Patent (*see, e.g.*, ¶¶ 112-136).

8 156. Broadcom and VMware's contributory infringements include, without limitation,  
9 making, offering to sell, and/or selling within the United States, and/or importing into the United  
10 States, the '707 Accused Products, which each include one or more components for use in practicing  
11 at least Claim 1 of the '707 Patent, knowing the component to be especially made or especially  
12 adapted for use in an infringement of at least Claim 1 of the '707 Patent (*see, e.g.*, ¶¶ 112-154), and  
13 not a staple article or commodity of commerce suitable for substantial non-infringing use.

14 **WILLFUL INFRINGEMENT**

15 157. Broadcom and VMware's infringement of the '707 Patent has been willful and  
16 deliberate.

17 158. As discussed above, Broadcom and VMware have had knowledge of the '707 Patent  
18 as of August 3, 2012.

19 159. As discussed above, Broadcom and VMware knew or should have known that their  
20 actions constitute infringement or recklessly disregarded those facts.

21 160. The willfulness facts for the Asserted Patents, ¶¶ 102-111, *supra*, are incorporated  
22 by reference herein.

23 161. Broadcom and VMware have willfully infringed the '707 Patent. Broadcom and  
24 VMware's knowing and willful infringement has caused and continues to cause damage to Netflix,  
25 and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware's  
26 wrongful acts in an amount subject to proof at trial.

27  
28

**THIRD CLAIM FOR RELIEF**

**Infringement of U.S. Patent No. 8,799,891 (the “’891 Patent”)**

***Against Broadcom and VMware***

162. Netflix incorporates by reference paragraph nos. 1-161, *supra*.

163. Defendant Broadcom and VMware have infringed, and continues to infringe, at least Claim 1 of the ’891 Patent, either literally or under the doctrine of equivalents, by making, using, selling, and/or offering for sale within the United States and/or importing into the United States products that are covered by at least Claim 1 of the ’891 Patent. These products include, but are not limited to VMware vSphere Foundation, VMware Cloud Foundation, VMware Cloud on AWS, Azure VMware Solution, Google Cloud VMware Engine, Oracle Cloud VMware Solution, IBM Cloud for VMware Solutions, Alibaba Cloud VMware Service, as well as any other vSphere-based products and/or services (collectively, the “’891 Accused Products”).

164. Claim 1 of the ’891 Patent recites:

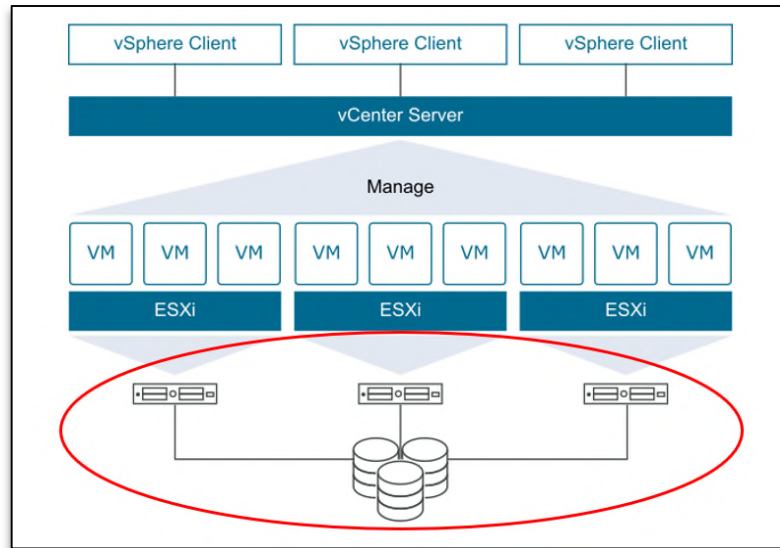

A method comprising:

observing communication from a given virtual machine (VM) of a plurality of VMs, to a virtual machine monitor (VMM), by observing communication from said VM that is requesting access to a resource, as an access request for said VM by said VMM; and

determining, based on said communication, utilization of the CPU by said VMM specifically attributable to said VM, and not attributable to any other of the plurality of VMs, wherein the utilization of the CPU by said VMM is the utilization of the CPU by said VMM performed for processing said access request for said VM by said VMM.

165. The ’891 Accused Products implement a method comprising “observing communication from a given virtual machine (VM) of a plurality of VMs, to a virtual machine monitor (VMM), by observing communication from said VM that is requesting access to a resource, as an access request for said VM by said VMM.”

1 166. Broadcom and VMware’s vSphere products allow VMs to share CPU, storage, and  
 2 networking resources. For example, vSphere, is described by Broadcom and VMware as a  
 3 “virtualization platform, which transforms data centers into aggregated computing infrastructures  
 4 that include CPU, storage, and networking resources.”<sup>101</sup>

5  
6  
7  
8  
9  
10  
11  
12  
13  
14 *Figure 28. Annotated vSphere architecture diagram with the shared CPU, storage, and  
networking resources circled in red.*

15 167. Broadcom and VMware describe that “the two core components of vSphere are ESXi  
 16 and vCenter Server.”<sup>102</sup> ESXi creates and runs virtual machines while vCenter Server allows for  
 17 managing multiple “hosts”—individual computers running ESXi—and pooling resources between  
 18 those hosts.<sup>103</sup> As shown, each host runs an instance of ESXi which in turn runs multiple VMs.  
 19 vCenter Server manages the multiple instances of ESXi and interacts with the vSphere Client.

20  
21

23  
24  
25

26 <sup>101</sup> “VMware vSphere Documentation,” VMware.com (captured December 4, 2022),  
 27 [https://web.archive.org/web/20221204141132/https://docs.vmware.com/en/VMware-  
vSphere/index.html](https://web.archive.org/web/20221204141132/https://docs.vmware.com/en/VMware-vSphere/index.html)

28 <sup>102</sup> *Id.*

<sup>103</sup> *Id.*

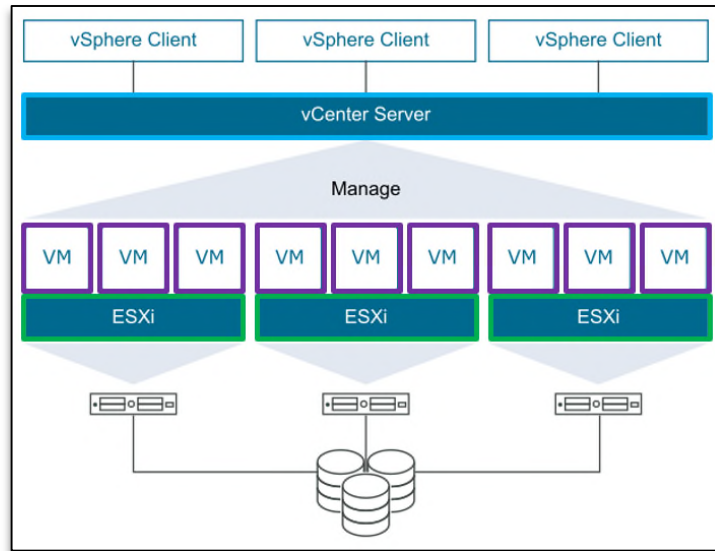

Figure 29. Annotated vSphere architecture diagram with ESXi instances in green, vCenter Server in blue, and individual VMs in purple.

168. Within ESXi is an “underlying operating system, called VMkernel.”<sup>104</sup> VMkernel provides “[r]esource scheduling” functionality for ESXi. VMkernel interfaces with hardware to deliver the shared CPU, storage, and network resources from the host to specific virtual machines.<sup>105</sup>

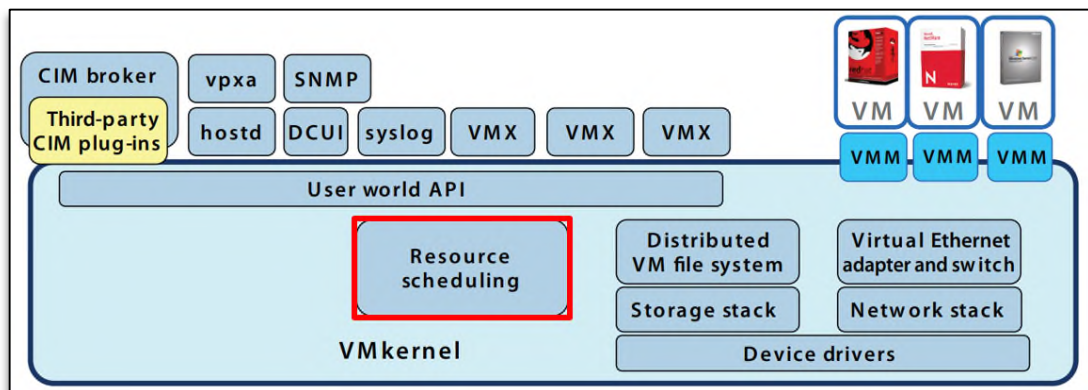

Figure 30. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with “Resource Scheduling” highlighted in red.

169. Each virtual machine communicates with the VMkernel through a process running on top of the VMkernel called a virtual machine monitor (“VMM”). This communication includes VM requests for host resources—indeed, VMkernel “has control of all hardware devices on the [host], and manages resources for the applications.”<sup>106</sup>

<sup>104</sup> “The Architecture of VMware ESXi,” VMware.com (captured December 9, 2008), [https://web.archive.org/web/20081209120933/http://www.vmware.com/files/pdf/ESXi\\_architecture.pdf](https://web.archive.org/web/20081209120933/http://www.vmware.com/files/pdf/ESXi_architecture.pdf).

<sup>105</sup> *Id.*

<sup>106</sup> *Id.*

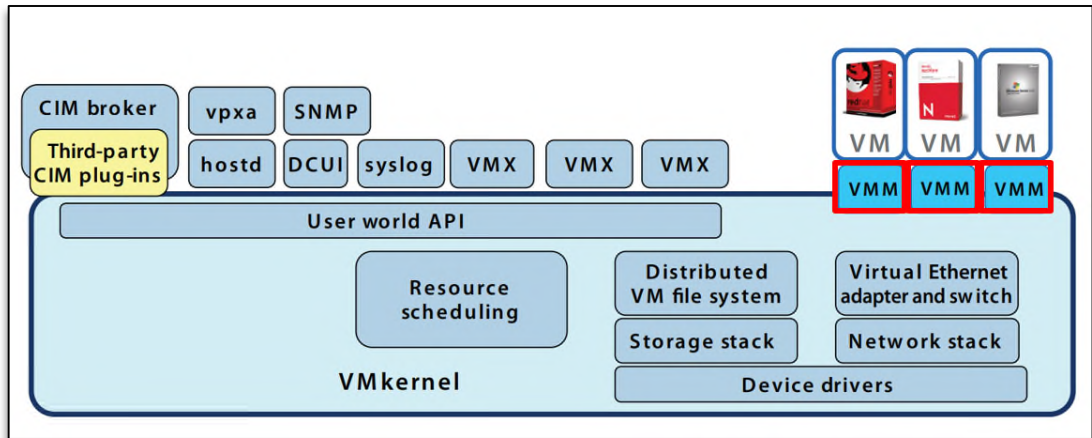

Figure 31. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper with VMMs highlighted in red.

170. The VMkernel includes the device drivers for the shared resources.

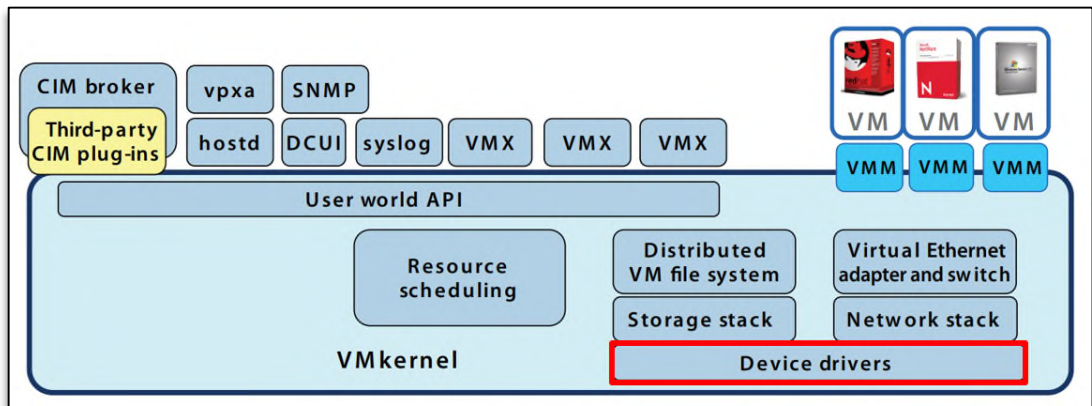

Figure 32. Annotated Figure 1 from “The Architecture of VMware ESXi” white paper showing location of device drivers in the VMkernel using red highlighting.

171. The “Common Information Model (CIM) system” is another process that runs on top of VMkernel.<sup>107</sup> This system is described as “enabl[ing] a framework for agentless, standards-based *monitoring of hardware resources for ESXi.*”<sup>108</sup> The CIM system consist of “a CIM object manager, often called a CIM broker, and a set of CIM providers.”<sup>109</sup> Specifically, “VMware [] *writes providers that implement monitoring of server hardware, ESX/ESXi storage infrastructure, and virtualization-specific resources*” and “these providers run inside the ESXi system.”<sup>110</sup>

172. The ’891 Accused Products also perform the step of “determining, based on said

<sup>107</sup> *Id.*

<sup>108</sup> *Id.*

<sup>109</sup> *Id.*

<sup>110</sup> *Id.*

1 communication, utilization of the CPU by said VMM specifically attributable to said VM, and not  
 2 attributable to any other of the plurality of VMs, wherein the utilization of the CPU by said VMM  
 3 is the utilization of the CPU by said VMM performed for processing said access request for said  
 4 VM by said VMM.”

5 173. For example, vSphere includes a “statistics subsystem [which] collects data on the  
 6 resource usage of inventory objects.”<sup>111</sup> The product literature explains:

7 [H]osts use data counters to query for statistics. A data counter is a  
 8 unit of information relevant to a given inventory object or device.  
 9 Each counter collects data for a different statistic in a metric group.  
 10 For example, the disk metric group includes separate data counters  
 to collect data for disk read rate, disk write rate, and disk usage.  
 Statistics for each counter are rolled up *after a specified collection*  
*interval*.<sup>112</sup>

11 174. vSphere monitors CPU usage of virtual machines. For example, the CPU panel  
 12 displays “server-wide statistics as well as statistics for . . . virtual machine CPU utilization.”<sup>113</sup> One  
 13 of these statistics, %USED, reflects the percentage of physical CPU core cycles used and may be  
 14 calculated for specific virtual machines.<sup>114</sup>

15 175. %USED is calculated using the following formula:

$$16 \quad \%USED = \%RUN + \%SYS - \%OVRP$$

17 176. In this formula, %RUN is the percentage of total time scheduled but does not account  
 18 for system time.

19 177. %SYS is the “[p]ercentage of time spent in the ESXi VMkernel on behalf of the . . .  
 20 virtual machine . . . to process interrupts and to perform other system activities.”

21 178. %OVRP is the “[p]ercentage of system time spent during scheduling of a resource  
 22 pool, virtual machine, or world on behalf of a different resource pool, virtual machine, or world  
 23 while the resource pool, virtual machine, or world was scheduled.” For example, “if virtual machine  
 24 A is being scheduled and a network packet for virtual machine B is processed by the ESXi

25 \_\_\_\_\_  
 26 <sup>111</sup> “vSphere Monitoring and Performance,” VMware.com (copyright 2010-2021),  
[https://docs.vmware.com/en/VMware-vSphere/7.0/vsphere-esxi-vcenter-server-703-monitoring-  
 performance-guide.pdf](https://docs.vmware.com/en/VMware-vSphere/7.0/vsphere-esxi-vcenter-server-703-monitoring-performance-guide.pdf).

27 <sup>112</sup> *Id.*

28 <sup>113</sup> *Id.*

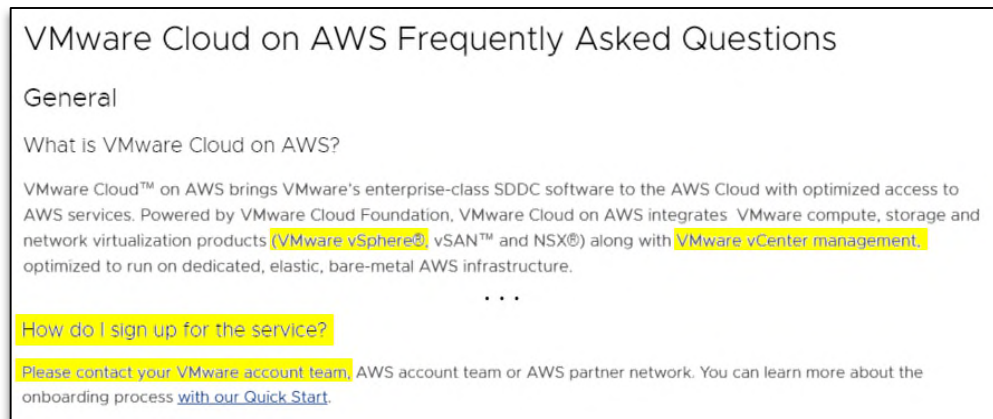

<sup>114</sup> *Id.*

1 VMkernel, the time spent appears as %OVRLP for virtual machine A and %SYS for virtual machine  
2 B.” Accordingly, the ’891 Accused Products perform all steps of Claim 1 of the ’891 Patent.

### 3 DIRECT INFRINGEMENT

4 179. Broadcom and VMware directly infringe the ’891 Patent in multiple ways.

5 180. Broadcom and VMware directly infringe the ’891 Patent when they perform the  
6 claimed methods of the ’891 Patent, in violation of at least 35 U.S.C. § 271(a), by providing the  
7 ’891 Accused Products as a service.

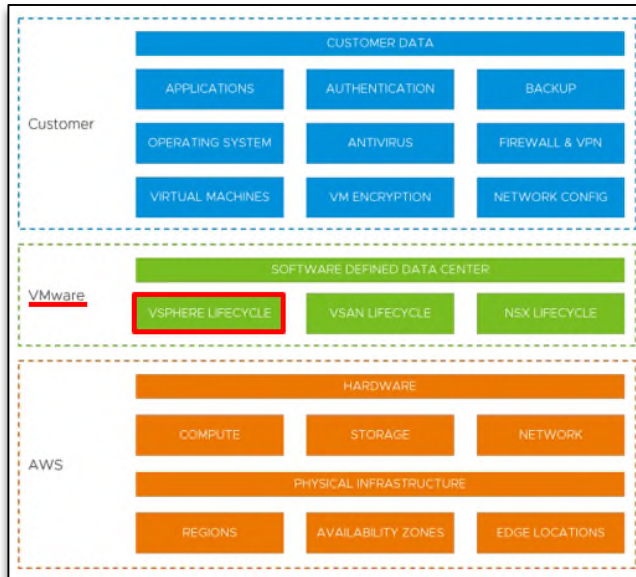

8  
9  
10  
11  
12  
13  
14  
15 *Figure 33. Annotated screenshot from VMware Cloud Tech Zone FAQ page explaining the  
16 VMware Cloud on AWS Service and how to sign up.*

17 181. When a customer signs up for and uses a vSphere cloud-based service (e.g., VMware  
18 Cloud on AWS), Broadcom and VMware perform the claimed methods as discussed above by  
19 controlling and maintaining responsibility for the infringing functionality. Alternatively, Broadcom  
20 and VMware conditions the benefit of the ’891 Accused Products on Broadcom and VMware’s  
21 partners performing the infringing functionality and Broadcom and VMware’s control of the manner  
22 and timing of said performance. Broadcom and VMware maintain a “Shared Responsibility Model”  
23 that is “common among the different VMware Cloud Providers” and “defines distinct roles and  
24 responsibilities between the VMware Cloud Infrastructure Services provider and an organization  
25 consuming the service.”<sup>115</sup>

26 182. Broadcom and VMware maintain responsibility for the “vSphere Lifecycle.” As  
27 further confirmation, when describing the AWS implementation, Broadcom and VMware describe

28 <sup>115</sup> “VMware Cloud Well-Architected Framework for VMware Cloud on AWS,” VMware.com (copyright 2023), <https://docs.vmware.com/en/VMware-Cloud-Well-Architected-Framework/services/vmcwaf-aws.pdf>.

1 one of the goals of the shared responsibility model as being to “[p]rotect VMware-managed objects”  
 2 including “management appliances” and “hosts.”<sup>116</sup> The “management appliances” and “hosts”  
 3 execute code performing the steps of Claim 1.

4  
5

7  
8  
9  
10  
11  
12  
13 *Figure 34. Annotated diagram from the “VMware Cloud Well-Architected Framework for VMware Cloud on AWS” document splitting responsibility between the customer, VMware, and AWS and showing vSphere as a responsibility of VMware highlighted in red.*

14  
15 183. Broadcom and VMware also directly infringe by using the claimed method to  
 16 demonstrate, test, install, and configure the ’891 Accused Products for their customers. For example,  
 17 Broadcom and VMware directly infringe by using the ’891 Accused Products for demonstrating via  
 18 VMware Hands-on Labs, *infra*.

#### 19 **INDIRECT INFRINGEMENT: INDUCEMENT**

20 184. Broadcom and VMware have had knowledge of the ’891 Patent since at least  
 21 September 28, 2011 based on VMware’s prosecution of the application that ultimately issued as  
 22 U.S. Patent No. 8,171,141. There, the USPTO identified the publication corresponding to the ’891  
 23 Patent in a notice of references cited as pertinent to VMware’s application. On August 7, 2019,  
 24 during prosecution of VMware’s application that issued as U.S. Patent No. 10,628,330, the USPTO  
 25 again identified the publication corresponding to the ’891 Patent in a notice of references cited as  
 26 pertinent to VMware’s application.

27  
28 <sup>116</sup> “VMware Cloud on AWS: vCenter Architecture,” VMware.com (copyright 2005-2024), <https://vmc.techzone.vmware.com/vmc-arch/docs/compute/vmc-aws-vcenter-architecture#sec27179-sub1>.

185. Broadcom and VMware have had knowledge of the '891 Patent since at least August 3, 2012 based on VMware's knowledge of the '424 Patent. As noted above, VMware's knowledge of the '424 Patent can be traced back to August 3, 2012, when the '424 Patent was cited by an examiner at the United States Patent and Trademark Office ("USPTO") during a rejection of VMware's application that ultimately issued as U.S. Patent No. 8,650,564. The '424 Patent incorporates by reference U.S. Patent Application Nos. 11/070,602 and 11/070,605, and the '891 Patent issued from Application No. 11/070,602. Accordingly, once VMware had knowledge of the '424 Patent on August 3, 2012, it also had, or recklessly disregarded knowledge of, the '707 Patent.

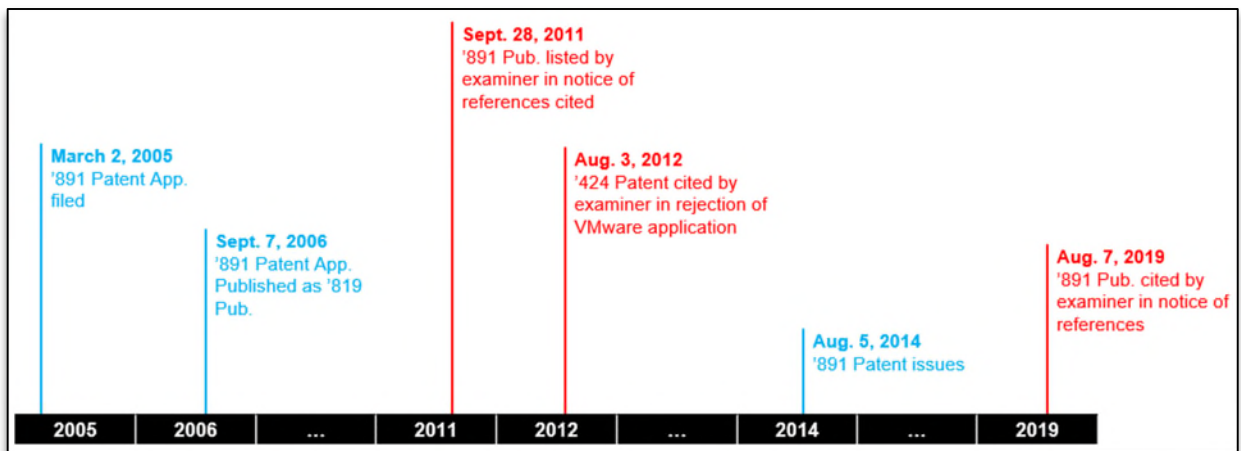

Figure 35. Timeline showing Broadcom and VMware's knowledge of the '891 Patent with activities related to '891 Patent in blue and activities related to Broadcom and VMware's knowledge of the '891 Patent in red.

186. VMware's knowledge of the Asserted Patents, including the '891 Patent, can be imputed to Broadcom for the reasons stated above, ¶¶ 84-85, incorporated by reference herein.

187. Broadcom's direct knowledge of the Asserted Patents, including the '891 Patent, is detailed above, ¶¶ 86-87, incorporated by reference herein.

188. Broadcom and VMware have actively induced infringement of at least Claim 1 of the '891 Patent in violation of at least 35 U.S.C. § 271(b). Users of the '891 Accused Products directly infringe at least Claim 1 of the '891 Patent when they use the '891 Accused Products in the ordinary, customary, and intended way. Broadcom and VMware's inducements includes, without limitation and with specific intent to encourage the infringement, knowingly inducing consumers to use the '891 Accused Products within the United States in the ordinary, customary, and intended way by, directly or through intermediaries, supplying the '891 Accused Products to consumers

1 within the United States and instructing and encouraging such customers to use the '891 Accused  
2 Products in the ordinary, customary, and intended way, which Broadcom and VMware know or  
3 should know infringes at least Claim 1 of the '891 Patent.

4 189. Broadcom and VMware sell the '891 Accused Products to their customers as  
5 software for installation on customer computer(s). When Broadcom and VMware's customers  
6 install the '891 Accused Products and run a virtual machine, at least Claim 1 of the '891 Patent is  
7 performed. In at least this way, the customers of Broadcom and VMware directly infringe the '891  
8 Patent *while* Broadcom and VMware know of the '891 Patent, know or should know that these  
9 activities infringe the '891 Patent, and specifically intend and instruct for their customers to infringe.  
10 Broadcom and VMware have provided and continue to provide these instructions to infringe despite  
11 knowing of the '891 Patent and knowing or being willfully blind to the fact these activities infringe  
12 the '891 Patent.

13 190. Broadcom and VMware's instructions to their customers to infringe are made at least  
14 through their creation and distribution of marketing, promotional, and instructional materials. The  
15 promotional and product literature for the Accused Products is designed to instruct, encourage,  
16 enable, and facilitate the user of the '891 Accused Products to use the '891 Accused Products in a  
17 manner that directly infringes the '891 Patent. And Broadcom and VMware provide instructions,  
18 support, and technical assistance to their customers in support of committing the infringement.

19 191. One nonlimiting example of Broadcom and VMware's inducement includes at least  
20 VMware Hands-on Labs for vSphere-based products.

21 192. On the official VMware YouTube page, Broadcom and VMware explain that  
22 VMware Hands-On Labs "delivers a real virtualized infrastructure in the cloud powered by  
23 VMware" to let customers "try out products from the convenience of [their] browser."<sup>117</sup> Broadcom  
24 and VMware further explain that "each self-paced lab is guided with a manual and built in modules  
25 so you can take all or just part of a lab and come and go from labs as often as you like."<sup>118</sup>

27 \_\_\_\_\_  
28 <sup>117</sup> "What are VMware Hands-on Labs," VMware YouTube Channel, YouTube.com (June 25,  
2014), [https://www.youtube.com/watch?v=XggYeVsK\\_R0](https://www.youtube.com/watch?v=XggYeVsK_R0), 0:25-32.

<sup>118</sup> *Id.*, 0:34-42.

Figure 36. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?,” showing VMware Hands-on Lab Environment highlighted with in-lab manual highlighted in red.

193. Broadcom and VMware offer VMware Hands-on Labs directly related to use of the vSphere functionality that infringes the ’891 Patent. For example, Broadcom and VMware offer a VMware Hands-on Lab on “vSphere Performance Optimization.”

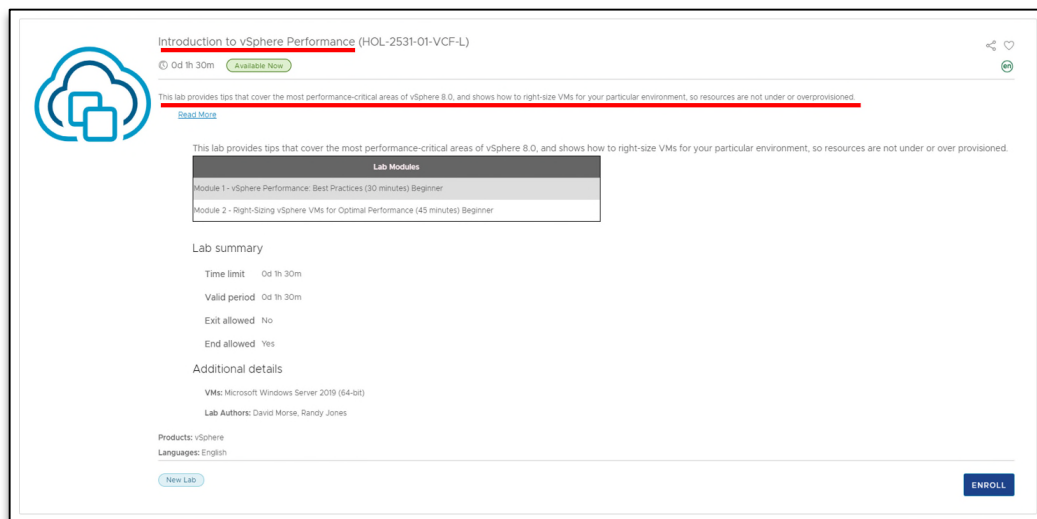

Figure 37. VMware Hands-on Lab course catalog entry showing Hands-on Lab titled “Introduction to vSphere Performance.”<sup>119</sup>

<sup>119</sup> “Catalog,” VMware Hands-on Labs, <https://labs.hol.vmware.com/HOL/catalog>.

Figure 38. VMware Hands-on Lab course showing manual discussing instructions specific to CPU Performance in vSphere.

194. Broadcom and VMware thus encourage their customers to infringe the '891 Patent at least by instructing customers on how to infringe by providing “manuals and built in modules” in proximity to “actual VMware products” for customers to practice infringing conduct through their VMware Hands-on Labs.

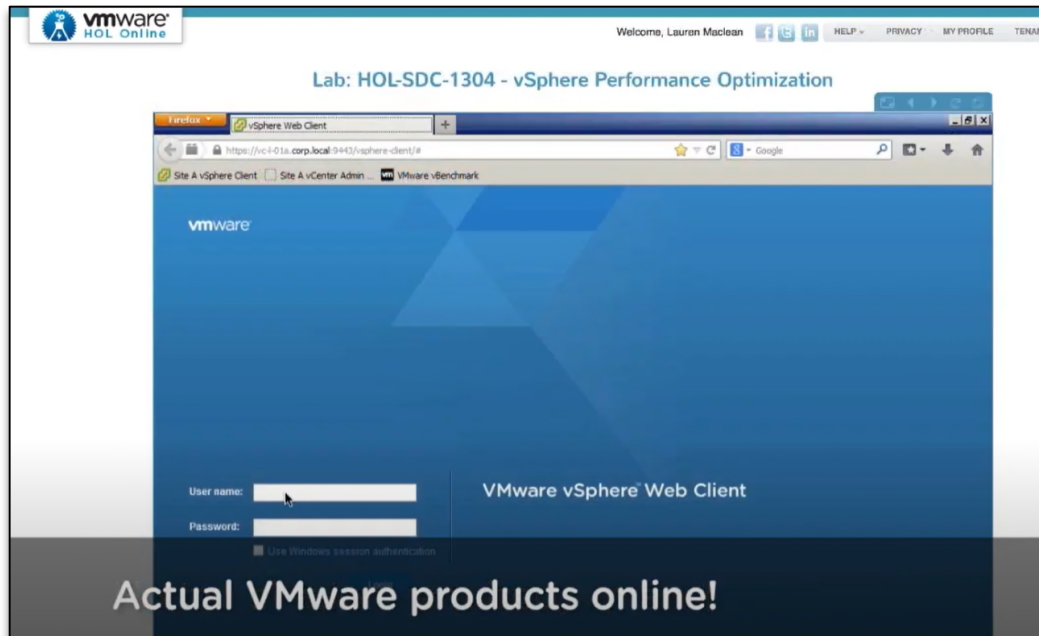

Figure 39. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?”

195. Besides the VMware Hand-on Labs discussed above, Broadcom and VMware publicly share numerous instructions, troubleshooting manuals, and product documentations through Broadcom’s support portal (<https://support.broadcom.com/>) and at

1 <https://docs.vmware.com/en/VMware-vSphere/index.html>.

2 196. Like the Hands-on Labs discussed above, these support documents also provide step-  
3 by-step instructions explaining how to use the '891 Accused Products in an infringing manner to  
4 determine performance metrics such as CPU utilization.

5 197. Thus, Broadcom and VMware have induced their customers to infringe the '891  
6 Patent. Broadcom and VMware's knowing inducement of their customers to infringe has caused  
7 and continues to cause damage to Netflix, and Netflix is entitled to recover damages sustained as a  
8 result of Broadcom and VMware's wrongful acts in an amount subject to proof at trial.

### 9 **INDIRECT INFRINGEMENT: CONTRIBUTORY INFRINGEMENT**

10 198. Broadcom and VMware have actively contributed to infringement of at least Claim 1  
11 of the '891 Patent in violation of at least 35 U.S.C. § 271(c). Broadcom sells the '891 Accused  
12 Products, which are software specially made or especially adapted to practice the method claimed  
13 in at least Claim 1 of the '891 Patent.

14 199. The infringing components of the '891 Accused Products have no substantial  
15 function or use other than to practice the invention claimed in at least Claim 1 of the '891 Patent at  
16 least because infringement of the claimed method is performed automatically when customers start  
17 a virtual machine using the '891 Accused Products installed on a computer system.

18 200. The '891 Accused Products are material components of the claimed method recited  
19 in at least Claim 1 of the '891 Patent and are not a staple article or commodity of commerce,  
20 including because they are specifically configured to infringe according to at least Claim 1 of the  
21 '707 Patent (*see, e.g.*, ¶¶ 162-183).

22 201. Broadcom and VMware's contributory infringements include, without limitation,  
23 making, offering to sell, and/or selling within the United States, and/or importing into the United  
24 States, the '891 Accused Products, which each include one or more components for use in practicing  
25 at least Claim 1 of the '891 Patent, knowing the component to be especially made or especially  
26 adapted for use in an infringement of at least Claim 1 of the '891 Patent (*see, e.g.*, ¶¶ ), and not a  
27 staple article or commodity of commerce suitable for substantial non-infringing use.

### 28 **WILLFUL INFRINGEMENT**

1 202. Broadcom and VMware’s infringement of the ’891 Patent has been willful and  
2 deliberate.

3 203. As discussed above, Broadcom and VMware have had actual knowledge of the ’891  
4 Patent as of August 3, 2012.

5 204. As discussed above, Broadcom and VMware knew or should have known that their  
6 actions infringe and actively induce infringement of the ’891 Patent.

7 205. The willful infringement facts for the Asserted Patents, ¶¶ 102-111 *supra*, are  
8 incorporated by reference herein.

9 206. Thus, Broadcom and VMware have willfully infringed the ’891 Patent. Broadcom  
10 and VMware’s knowing and willful infringement has caused and continues to cause damage to  
11 Netflix, and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware’s  
12 wrongful acts in an amount subject to proof at trial.

13 **FOURTH CLAIM FOR RELIEF**

14 **Infringement of U.S. Patent No. 8,185,893 (the “’893 Patent”)**

15 ***Against Broadcom and VMware***

16 207. Netflix incorporates by reference paragraph nos. 1-206, *supra*.

17 208. Broadcom and VMware have infringed, and continue to infringe, at least Claim 16  
18 of the ’893 Patent, either literally or under the doctrine of equivalents, by making, using, selling,  
19 and/or offering for sale within the United States and/or importing into the United States products  
20 that are covered by at least Claim 16 of the ’893 Patent. These products include, but are not limited  
21 to VMware vSphere Foundation, VMware Cloud Foundation, VMware Cloud on AWS, Azure  
22 VMware Solution, Google Cloud VMware Engine, Oracle Cloud VMware Solution, IBM Cloud for  
23 VMware Solutions, Alibaba Cloud VMware Service, as well as any other vSphere-based products  
24 and/or services when used in conjunction with VMware Cloud Director’ auto-scale groups  
25 (collectively, the “’893 Accused Products”).

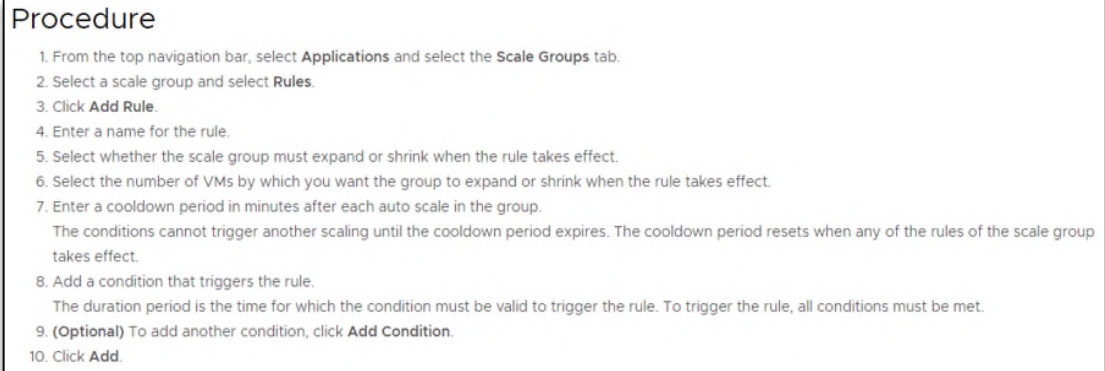

26 209. Claim 16 of the ’893 Patent recites:

27 A method for use in a system having plural physical machines  
28 that contain active virtual machines, comprising:

1 receiving, at a load balancer, a request from a client;  
2 in response to the request, determining whether at least one  
3 additional virtual machine should be started up;  
4 in response to determining that at least one additional virtual  
5 machine should be started up, the load balancer sending at least one  
6 command to start up the at least one additional virtual machine in at  
7 least one of the physical machines;  
8 determining, by the load balancer, whether a workload  
9 loading of the active virtual machines and the at least one additional  
10 virtual machine has fallen below a threshold;  
11 in response to determining that the workload loading has  
12 fallen below the threshold, disabling a particular one of the active  
13 virtual machines and the at least one additional virtual machine;  
14 a placement controller selecting placement of the active  
15 virtual machines and the at least one additional virtual machines on  
16 the physical machines to achieve a predefined policy;  
17 computing, by the placement controller, indicators associated  
18 with corresponding plural different layouts of the active virtual  
19 machines and the at least one additional virtual machine on the  
20 physical machines, where the indicators provide information  
21 regarding performances of the corresponding layouts, and wherein  
22 each of the indicators is computed based on parameters associated  
23 with a corresponding one of the plural layouts;  
24 comparing, by the placement controller, the indicators; and  
25 selecting, by the placement controller, one of the plural  
26 layouts based on the comparing.

27 210. The '893 Accused Products implement a method comprising "receiving, at a load  
28 balancer, a request from a client."

1           211. “VMware Cloud Director” allows “tenant users to auto scale applications depending  
 2 on the current CPU and memory use.”<sup>120</sup> In order to enable this functionality a user “must configure,  
 3 publish, and grant access to the auto scale solution.”<sup>121</sup> Additionally the user must “Add Rule[s]”  
 4 for VMware Cloud Director to use for the operation and VMware’s manuals instruct users to do so.  
 5 These rules are then received by VMware Cloud Director which then executes the auto scaling  
 6 feature.

13 *Figure 40. Screenshot showing procedure for auto-scaling in VMware Cloud Director.*<sup>122</sup>

9 *Figure 41. Screenshot showing the interface for a user to “Add Rule” for auto scaling in VMware*  
 10 *Cloud Director.*<sup>123</sup>

11 212. The ’893 Accused Products further implement a method comprising “in response to  
 12 the request, determining whether at least one additional virtual machine should be started up” and  
 13 “in response to determining that at least one additional virtual machine should be started up, the  
 14 load balancer sending at least one command to start up the at least one additional virtual machine in  
 15 at least one of the physical machines.”

16 213. For example, VMware Cloud Director uses “predefined criteria for the CPU and  
 17 memory use” to determine whether to “automatically scale up or down the number of VMs in a  
 18 selected scale group.”<sup>124</sup> The predefined criteria is established using the “Add Rule” functionality  
 19 discussed above. Broadcom and VMware further explain that the “amount of VMs in a scale group  
 20 changes automatically depending on the conditions that you define.”<sup>125</sup> As shown in the exemplary  
 21 screenshot below, the “Add Rule” interface enables VMware Cloud Director to “Grow” an  
 22 application by a certain number of VMs when a “Rule” is satisfied, e.g., when a condition  
 23 comprising a predefined CPU usage over a predefined duration is met.

27

28

Figure 42. Screenshot showing “Add Rule” UI in VMware Cloud Director and highlighting the “grow” behavior with associated condition in red circles.<sup>126</sup>

214. The ’893 Accused Products implement a method comprising “determining, by the load balancer, whether a workload loading of the active virtual machines and the at least one additional virtual machine has fallen below a threshold” and “in response to determining that the workload loading has fallen below the threshold, disabling a particular one of the active virtual machines and the at least one additional virtual machine.”

215. For example, as discussed above VMware Cloud Director uses “predefined criteria for the CPU and memory use” to determine whether to “automatically scale up or down the number of VMs in a selected scale group.” The predefined criteria are established using the “Add Rule” functionality discussed above. Broadcom and VMware further explain that the “amount of VMs in a scale group changes automatically depending on the conditions that you define.” As shown in the exemplary screenshot below, the “Add Rule” interface allows for VMware Cloud Director to “Shrink” an application by a certain number of VMs when a “Rule” is satisfied, e.g., a condition comprising a predefined CPU usage over a predefined duration is met (this selection is unchecked in the example below).

<sup>126</sup> “Feature Friday Episode 50 - VMware Cloud Director Autoscaling,” VMware Cloud Services Provider YouTube Channel, YouTube.com (June 4, 2021), <https://www.youtube.com/watch?v=vieF6LzvEfu>.

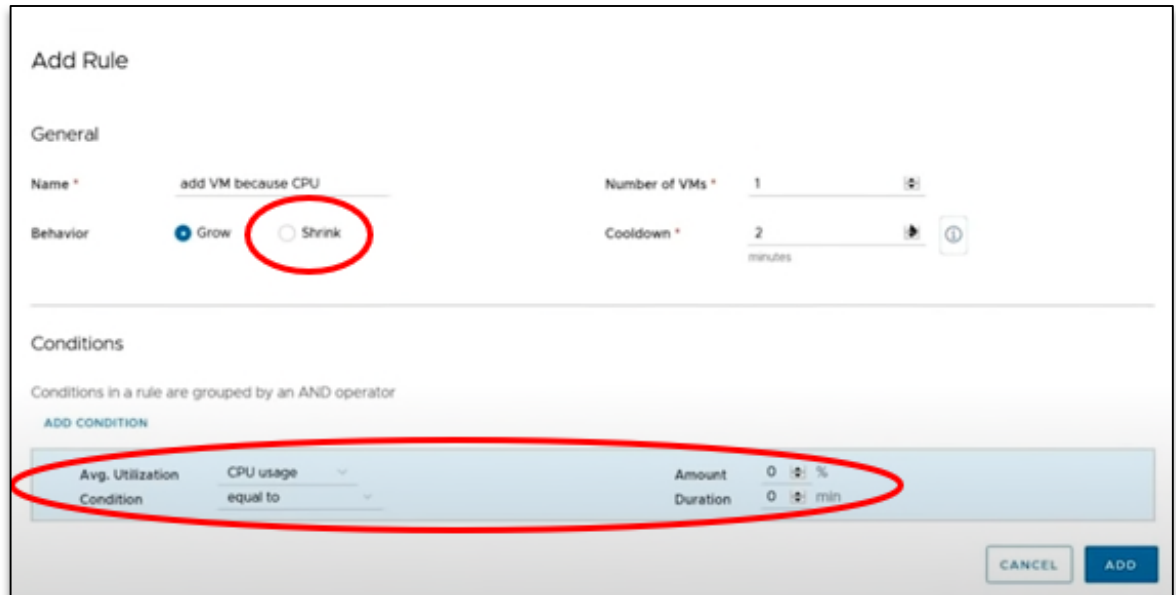

Figure 43. Screenshot showing “Add Rule” UI in VMware Cloud Director and highlighting the “Shrink” behavior with associated condition in red circles.<sup>127</sup>

216. The ’893 Accused Products implement a method comprising “a placement controller selecting placement of the active virtual machines and the at least one additional virtual machines on the physical machines to achieve a predefined policy.”

217. vSphere’s Distributed Resource Scheduler (“DRS”) performs multiple functions within vSphere including placing a VM on an appropriate host when the VM is powered on, migrating virtual machines to other hosts within a cluster to maximize performance, and distributing VMs across vSphere cluster hosts to comply with affinity and anti-affinity rules.<sup>128</sup>

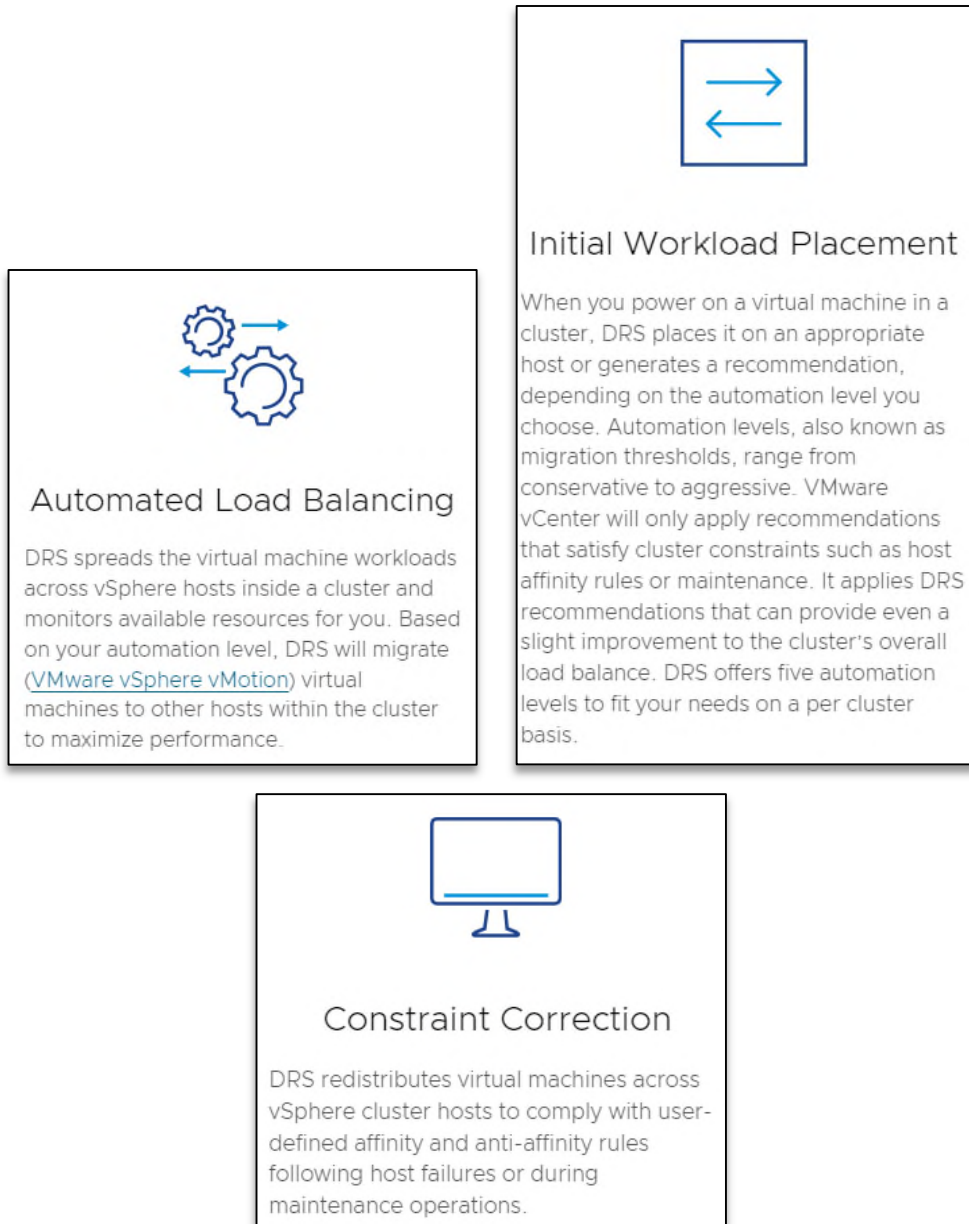

Figure 44. Screenshots explaining certain features of DRS in vSphere.

218. With the release of vSphere 7, VMware introduced “Improved DRS” which it described as “tak[ing] a very different approach” as compared to “old DRS” and explained that “[t]he DRS logic [was] completely rewritten to have a more fine-grained level of resource scheduling with the main focus on workloads.”<sup>129</sup> For example, VMware’s Improved DRS “computes a VM DRS score on each host and moves the VM to the host that provides the highest VM DRS score.”<sup>130</sup>

<sup>129</sup> Niels Hagoort, “vSphere 7 – Improved DRS,” VMware.com (March 25, 2020), <https://blogs.vmware.com/vsphere/2020/03/vsphere-7-improved-drs.html>.

<sup>130</sup> *Id.*

1           219. The '893 Accused Products implement a method comprising “computing, by the  
2 placement controller, indicators associated with corresponding plural different layouts of the active  
3 virtual machines and the at least one additional virtual machine on the physical machines, where the  
4 indicators provide information regarding performances of the corresponding layouts, and wherein  
5 each of the indicators is computed based on parameters associated with a corresponding one of the  
6 plural layouts.”

7           220. For example, VMware and now Broadcom describe VM DRS Score as follows:

8           The new DRS logic quantifies virtual machine happiness by using the  
9 VM DRS score. First, let me emphasize that the VM DRS Score is  
10 not a health score for the virtual machine! It is about the execution  
11 efficiency of a virtual machine. The score values range from 0 to  
12 100% and are divided into buckets; 0-20%, 20-40%, and so on.

13           Obtaining a VM DRS score of 80-100% indicates that there is mild to  
14 no resource contention. It does not necessarily mean that a virtual  
15 machine in the 80-100% bucket is doing way better than a virtual  
16 machine in the lower buckets. That is because there are many metrics  
17 that influence the VM DRS score. Not only performance metrics are  
18 used, but capacity metrics are also incorporated in the algorithm.

19           The performance drivers for the VM DRS score are contention based,  
20 using metrics like CPU %ready time, good CPU cache behavior, and  
21 memory swap. The reserve resource capacity, or headroom, that a  
22 current ESXi host has is also taken into account to determine the VM  
23 DRS score. Will the virtual machine be able to burst resource  
24 consumption on its current host and to what level? Are there other  
25 ESXi hosts in the cluster that have more headroom available? All  
26 these factors play an important role in the calculation of the VM DRS  
27 score.

28           221. The VM DRS score is computed for each host in the cluster to which a VM could be  
moved.<sup>131</sup> Additionally, Improved DRS runs every minute.<sup>132</sup>

          222. The '893 Accused Products implement a method comprising “comparing, by the  
placement controller, the indicators” and “selecting, by the placement controller, one of the plural  
layouts based on the comparing.”

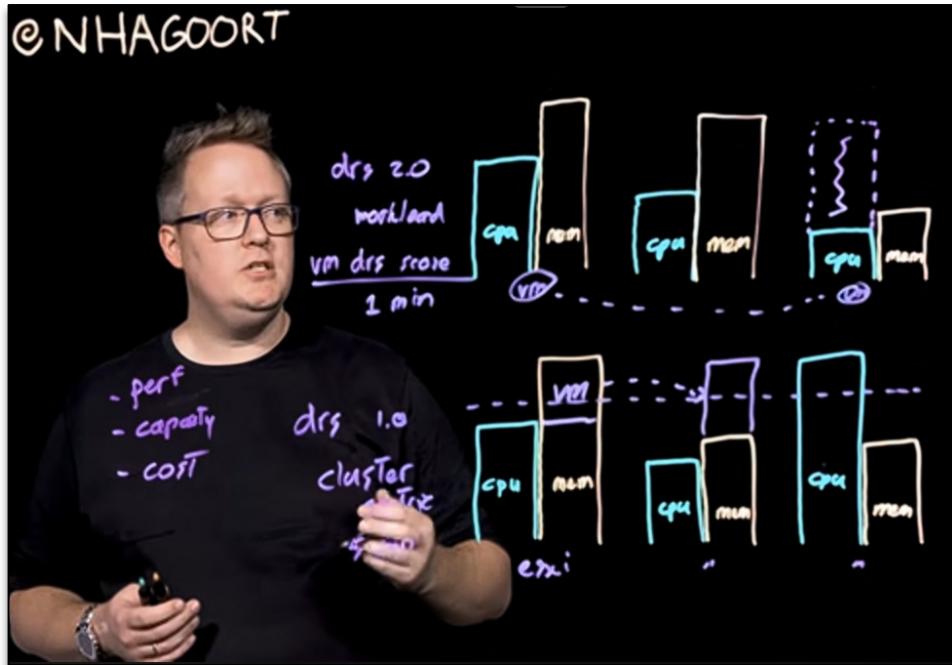

          223. In a video titled “What’s New with DRS in vSphere 7,” Broadcom and VMware  
explain of the VM DRS score: “we calculate that score for this specific virtual machine on each and

---

<sup>131</sup> See Niels Hagoort, “vSphere 7 – Improved DRS,” VMware.com (March 25, 2020),  
<https://blogs.vmware.com/vsphere/2020/03/vsphere-7-improved-drs.html>.

<sup>132</sup> See *id.*

1 every host in the cluster and we will do so each and every minute.”<sup>133</sup> The VM DRS scores are  
 2 calculated for each potential destination host and the calculated VM DRS scores are compared to  
 3 find the ideal host.

15 *Figure 45. Screenshot from a YouTube video published on the VMware vSphere Channel titled*  
 16 *“What’s New with DRS in vSphere 7” where the VMware Technical Marketing Architect describes*  
 17 *the function of the Improved DRS and the VM DRS Score.*

18 224. DRS then uses the comparison of VM DRS Scores to “migrate [] virtual machines to  
 19 other hosts within the cluster to maximize performance.” Specifically, “[t]he new DRS logic . . .  
 20 computes a VM DRS score on each host and moves the VM to the host that provides the highest  
 21 VM DRS score.”<sup>134</sup>

**DIRECT INFRINGEMENT**

225. Broadcom and VMware directly infringe the '893 Patent in multiple ways.

226. For example, in some cases, VMware directly infringe the '893 Patent at least when they perform the claimed methods of the '893 Patent, in violation of at least 35 U.S.C. § 271(a), by providing the '893 Accused Products as a service.<sup>136</sup>

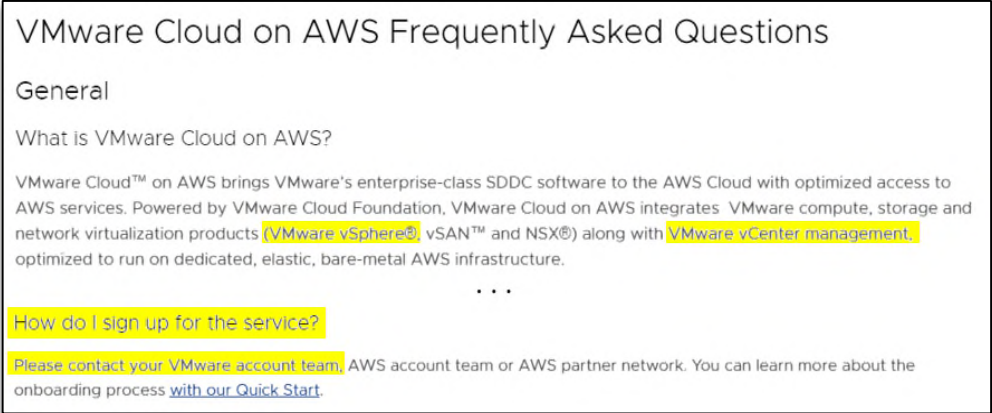

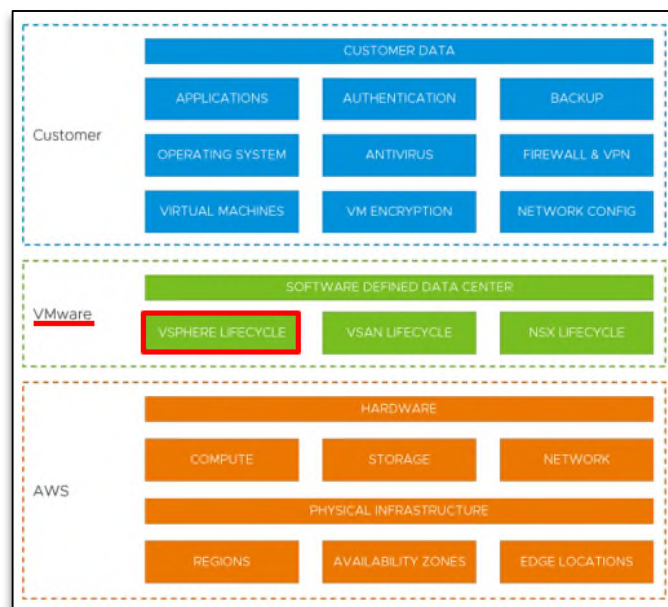

Figure 47. Annotated screenshot from VMware Cloud Tech Zone FAQ page explaining the VMware Cloud on AWS Service and how to sign up.

227. When a customer signs up for and uses a vSphere cloud-based service (e.g., VMware Cloud on AWS), Broadcom and VMware perform the claimed methods as discussed above by controlling and maintaining responsibility for the infringing functionality. Alternatively, Broadcom

<sup>135</sup> Distributed Resource Scheduler, VMware.com, <https://www.vmware.com/products/cloud-infrastructure/vsphere/drs-dpm>.

<sup>136</sup> VMware Cloud Director is offered as a service compatible with, for example, VMware Cloud on AWS. See “VMware Cloud on AWS: VMware Cloud Director service Now Available,” VMware.com (May 28, 2020), <https://blogs.vmware.com/cloud/2020/05/28/vmware-cloud-aws-vmware-cloud-director-service-now-available/>.

1 and VMware condition the benefit of the '893 Accused Products on Broadcom and VMware's  
 2 partners performing the infringing functionality and Broadcom and VMware control the manner and  
 3 timing of said performance. Broadcom and VMware maintain a "Shared Responsibility Model" that  
 4 is "common among the different VMware Cloud Providers" and "defines distinct roles and  
 5 responsibilities between the VMware Cloud Infrastructure Services provider and an organization  
 6 consuming the service."<sup>137</sup> As shown below, Broadcom and VMware maintain responsibility for the  
 7 "vSphere Lifecycle." As further confirmation, when describing the AWS implementation,  
 8 Broadcom and VMware describe one of the goals of the shared responsibility model as being to  
 9 "[p]rotect VMware-managed objects" including "management appliances" and "hosts."<sup>138</sup> The  
 10 "management appliances" and "hosts" execute code performing the steps of Claim 16 described  
 11 above.

12  
13  
14  
15

22 *Figure 48. Annotated diagram from the "VMware Cloud Well-Architected Framework for  
 23 VMware Cloud on AWS" document splitting responsibility between the customer, VMware, and  
 24 AWS and showing vSphere as a responsibility of VMware highlighted in red.*

25 228. Broadcom and VMware also directly infringe by using the claimed method to  
 26 demonstrate, test, install, and configure the '893 Accused Products for their customers. For example,

27 <sup>137</sup> "VMware Cloud Well-Architected Framework for VMware Cloud on AWS," VMware.com  
 28 (copyright 2023), <https://docs.vmware.com/en/VMware-Cloud-Well-Architected-Framework/services/vmcwaf-aws.pdf>.

<sup>138</sup> "VMware Cloud on AWS: vCenter Architecture," VMware.com (copyright 2005-2024),  
<https://vmc.techzone.vmware.com/vmc-arch/docs/compute/vmc-aws-vcenter-architecture#sec27179-sub1>.

1 Broadcom and VMware directly infringe by using the '893 Accused Products for demonstrating via  
2 VMware Hands-on Labs, *infra*.

3 **INDIRECT INFRINGEMENT: INDUCEMENT**

4 229. Broadcom and VMware have had knowledge of the '893 Patent since at least July  
5 31, 2014, when VMware received the first of numerous citations to either the '893 Patent or the  
6 publication corresponding to the '893 Patent (U.S. Pub. No. 2008/0104608, the "'608 Publication").  
7 During prosecution of the application that issued as U.S. Patent No. 9,152,448, the USPTO cited to  
8 the '608 Publication (even though the '893 Patent issued on May 22, 2012) in a notice of references  
9 cited dated July 31, 2014. The '608 Publication was also listed in additional references cited on  
10 September 21, 2015 during prosecution of applications that issued as U.S. Patent No. US9513946  
11 and on July 23, 2018 during prosecution of the application that issued as U.S. Patent No. 10,139,876.  
12 The '893 Patent was listed in a notice of references on June 20, 2017 during prosecution of the  
13 application that issued as U.S. Patent No. 10,348,628.

14 230. Additionally, both VMware and the USPTO substantively addressed the contents of  
15 the '893 Patent. During prosecution of VMware's U.S. Patent No. 9,513,946, VMware's application  
16 claims were rejected in view of the '608 Publication on September 21, 2015 and April 11, 2016.  
17 VMware also addressed the '608 Publication in responses to the USPTO filed on December 18,  
18 2015 and July 7, 2016. The USPTO also rejected VMware's application claims during prosecution  
19 of U.S. Patent No. 10,139,876 on July 23, 2018.

20 231. VMware also cited the '893 Patent in an Information Disclosure Statement ("IDS")  
21 on February 7, 2020 as part of prosecution of U.S. Patent No. 11,183,713. VMware also cited the  
22 '608 Publication to the USPTO in numerous IDSs between December 9, 2015 and March 11, 2021.  
23 *See* prosecution histories of U.S. Patent Nos. 9,367,414; 9,495,259; 10,586,048; 10,929,171;  
24 10,944,673; 11,140,218; 11,153,406; 11,212,356; 11,223,494; 11,595,250; 11,611,625; 11,659,061.

25  
26 [remainder of page intentionally left blank]  
27  
28

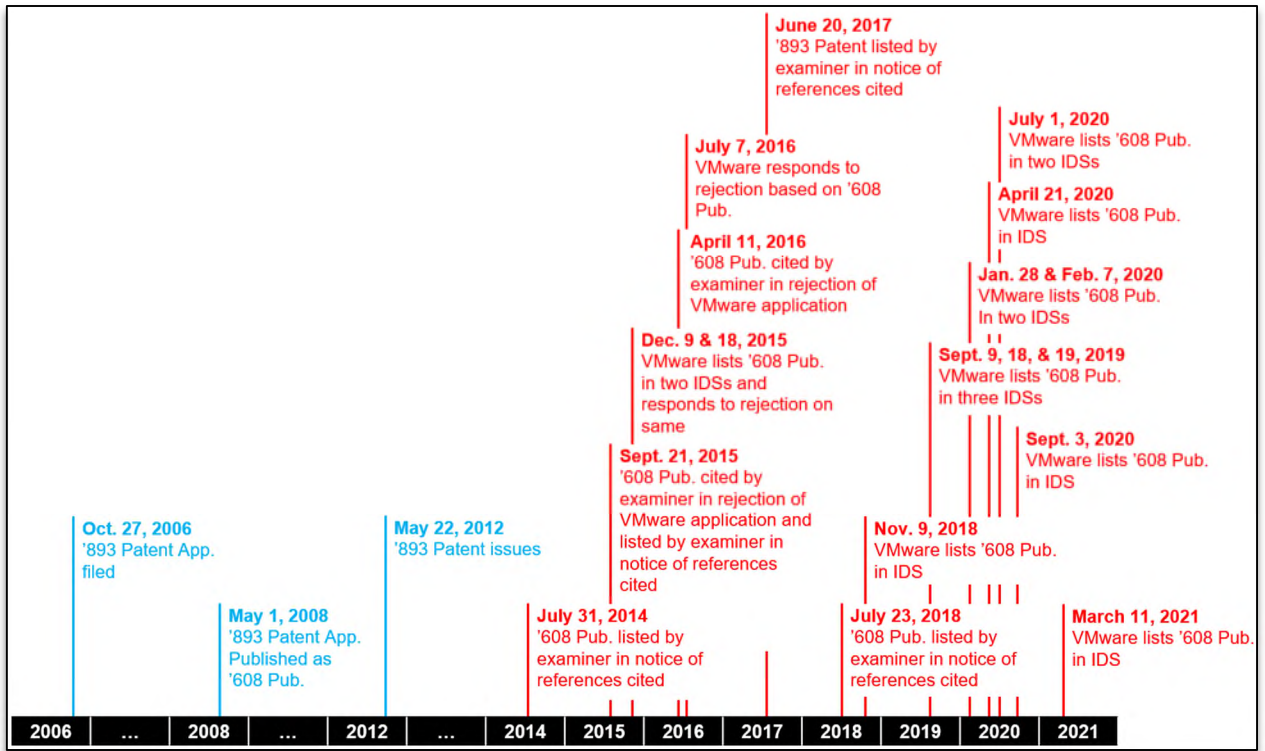

Figure 49. Timeline showing Broadcom and VMware's knowledge of the '893 Patent with activities related to '893 Patent in blue and activities related to Broadcom and VMware's knowledge of the '893 Patent in red.

232. VMware's knowledge of the Asserted Patents, including the '893 Patent, can be imputed to Broadcom for the reasons stated above, ¶¶ 84-85, incorporated by reference herein.

233. Broadcom's direct knowledge of the Asserted Patents, including the '893 Patent, is detailed above, ¶¶ 86-87, incorporated by reference herein.

234. Broadcom and VMware have actively induced infringement of at least Claim 16 of the '893 Patent in violation of at least 35 U.S.C. § 271(b). Users of the '893 Accused Products directly infringe at least Claim 16 of the '893 Patent when they use the '893 Accused Products in the ordinary, customary, and intended way. Broadcom and VMware's inducement include, without limitation and with specific intent to encourage the infringement, knowingly inducing consumers to use the '893 Accused Products within the United States in the ordinary, customary, and intended way by, directly or through intermediaries, supplying the '893 Accused Products to consumers within the United States and instructing and encouraging such customers to use the '893 Accused Products in the ordinary, customary, and intended way, which Broadcom and VMware know or should know infringes at least Claim 16 of the '893 Patent.

1           235. Broadcom and VMware sell the '893 Accused Products to their customers as  
2 software for installation on customer computer(s). When Broadcom's customers install the '893  
3 Accused Products and run a virtual machine, at least Claim 16 of the '893 Patent is performed. In at  
4 least this way, Broadcom and VMware's customers directly infringe the '893 Patent *while*  
5 Broadcom and VMware know of the '893 Patent, or should know that these activities infringe the  
6 '893 Patent, and specifically intend and instruct their customers to infringe. Broadcom and VMware  
7 have provided and continue to provide these instructions to infringe despite knowing of the '893  
8 Patent and knowing or being willfully blind to the fact these activities infringe the '893 Patent.

9           236. Broadcom and VMware's instructions to their customers to infringe are made at least  
10 through their creation and distribution of marketing, promotional, and instructional materials. The  
11 promotional and product literature for the Accused Products is designed to instruct, encourage,  
12 enable, and facilitate the user of the '893 Accused Products to use the '893 Accused Products in a  
13 manner that directly infringes the '893 Patent. And Broadcom and VMware provide instructions,  
14 support, and technical assistance to their customers in support of committing the infringement.

15           237. One nonlimiting example of Broadcom and VMware's inducement includes at least  
16 VMware Hands-on Labs for vSphere-based products.

17           238. On the official VMware YouTube page, Broadcom and VMware explain that  
18 VMware Hands-On Labs "delivers a real virtualized infrastructure in the cloud powered by  
19 VMware" to let customers "try out products from the convenience of [their] browser."<sup>139</sup> Broadcom  
20 and VMware further explain that "each self-paced lab is guided with a manual and built in modules  
21 so you can take all or just part of a lab and come and go from labs as often as you like."<sup>140</sup>

22  
23 [remainder of page intentionally left blank]  
24  
25  
26

27 \_\_\_\_\_  
28 <sup>139</sup> "What are VMware Hands-on Labs," VMware YouTube Channel, YouTube.com (June 25,  
2014), [https://www.youtube.com/watch?v=XggYeVsK\\_R0](https://www.youtube.com/watch?v=XggYeVsK_R0), 0:25-32.

<sup>140</sup> *Id.*, 0:34-42.

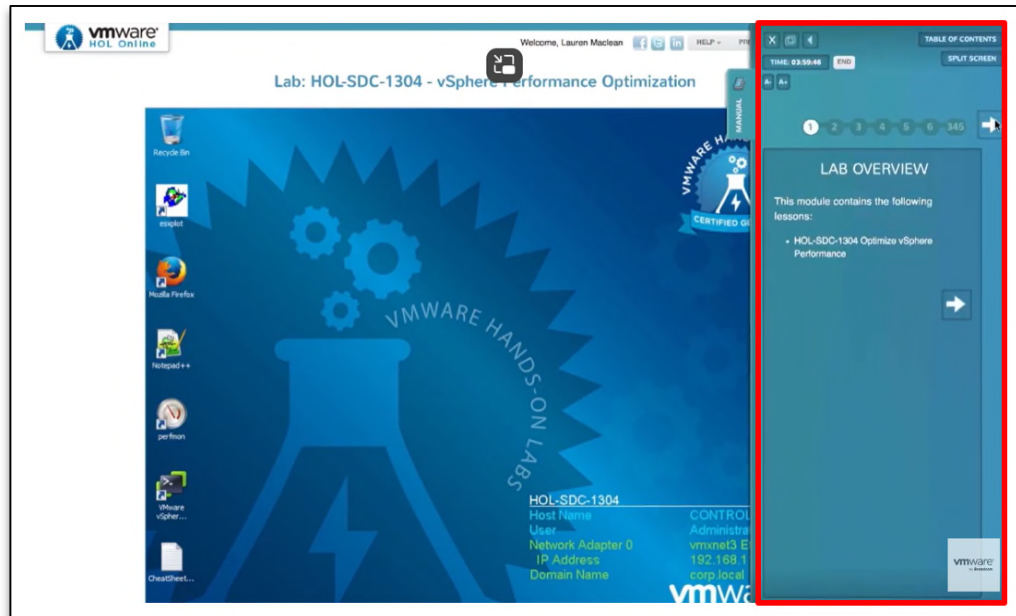

Figure 50. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?,” showing VMware Hands-on Lab Environment highlighted with in-lab manual highlighted in red.

239. Broadcom and VMware thus encourage their customers to infringe the '893 Patent at least by instructing customers on how to infringe by providing “manuals and built in modules” in proximity to “actual VMware products” for customers to practice infringing conduct through their VMware Hands-on Labs.

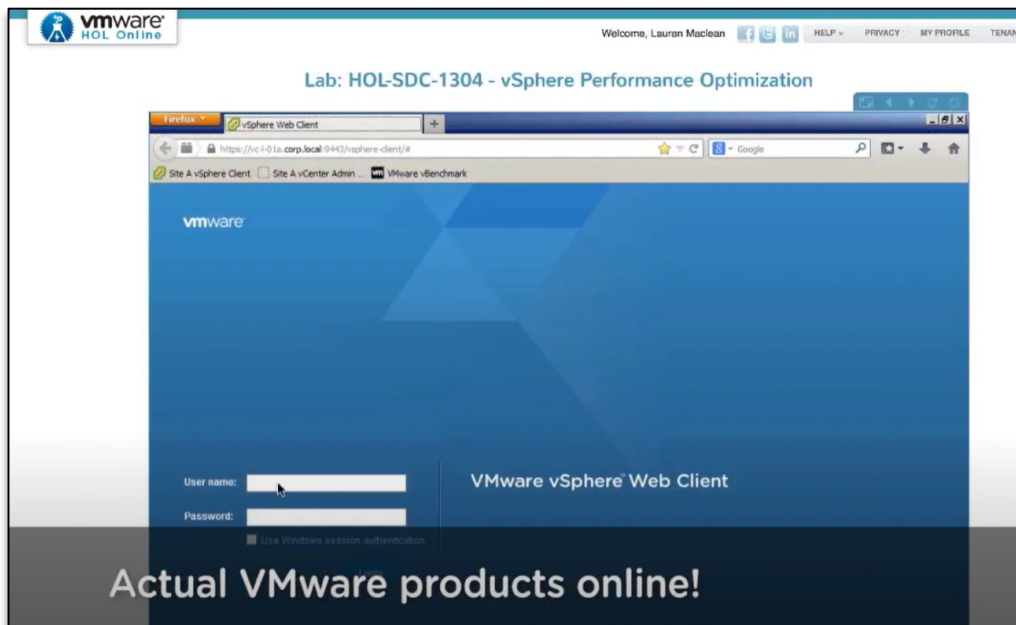

Figure 51. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?”

240. Besides the VMware Hand-on Labs discussed above, Broadcom and VMware publicly share numerous instructions, troubleshooting manuals, and product documentations

1 through Broadcom's support portal (<https://support.broadcom.com/>),  
2 <https://docs.vmware.com/en/VMware-vSphere/index.html>, and  
3 <https://docs.vmware.com/en/VMware-Cloud-Director/index.html>.

4 241. Like the Hands-on Labs discussed above, these support documents also provide step-  
5 by-step instructions explaining how to use the '893 Accused Products in an infringing manner to  
6 determine performance metrics such as CPU utilization.

7 242. Thus, Broadcom and VMware have induced their customers to infringe the '893  
8 Patent. Broadcom's knowing inducement of their customers to infringe has caused and continues to  
9 cause damage to Netflix, and Netflix is entitled to recover damages sustained as a result of  
10 Broadcom and VMware's wrongful acts in an amount subject to proof at trial.

#### 11 **WILLFUL INFRINGEMENT**

12 243. Broadcom and VMware's infringement of the '893 Patent has been willful and  
13 deliberate.

14 244. As discussed above, Broadcom and VMware have had actual knowledge of the '893  
15 Patent as of July 31, 2014.

16 245. As discussed above, Broadcom and VMware knew or should have known that their  
17 actions infringe and actively induce infringement of the '893 Patent.

18 246. The willful infringement facts for the Asserted Patents, ¶¶ 102-111 *supra*, are  
19 incorporated by reference herein.

20 247. Thus, Broadcom and VMware have willfully infringed the '893 Patent. Broadcom  
21 and VMware's knowing and willful infringement has caused and continues to cause damage to  
22 Netflix, and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware's  
23 wrongful acts in an amount subject to proof at trial.

#### 24 **FIFTH CLAIM FOR RELIEF**

##### 25 **Infringement of U.S. Patent No. 8,863,122 (the "122 Patent")**

##### 26 ***Against Broadcom and VMware***

27 248. Netflix incorporates by reference paragraph nos. 1-247, *supra*.

28 249. Broadcom and VMware have infringed, and continues to infringe, at least Claim 10

1 of the '122 Patent, either literally or under the doctrine of equivalents, by making, using, selling,  
2 and/or offering for sale within the United States and/or importing into the United States products  
3 that are covered by at least Claim 10 of the '122 Patent. These products include, but are not limited  
4 to, the vSphere Client and the ESXI Host Client (the "'122 Accused Product").

5 250. Claim 10 of the '122 Patent recites:

6 A method, comprising:

7 providing a first graphical user interface (GUI) from a host  
8 computer to a remote computer, the first GUI displaying on the  
9 remote computer a list of a plurality of virtual machines and to enable  
10 a user of the remote computer to select one of the virtual machines  
11 from the list as well as an action to be performed on the selected  
12 virtual machine, the selected action to be performed on the selected  
13 virtual machine independent of the other of the plurality of virtual  
14 machines;

15 receiving user input from the remote computer via the first  
16 GUI, the user input including a selection of a virtual machine and an  
17 action to be performed on the selected virtual machine;

18 in accordance with the user input, performing the action using  
19 the host computer on the selected virtual machine; and

20 generating a second GUI to enable the user of the remote  
21 computer to select a virtual machine from the plurality of virtual  
22 machines to which a hardware peripheral device accessible to the  
23 remote computer is to be mapped;

24 wherein said action is selected from the group consisting of  
25 starting, stopping, re-booting and shutting down.

26 251. The '122 Accused Products perform all the claimed steps.

27 252. The '122 Accused Products implement a method comprising "providing a first  
28 graphical user interface (GUI) from a host computer to a remote computer, the first GUI displaying

1 on the remote computer a list of a plurality of virtual machines and to enable a user of the remote  
2 computer to select one of the virtual machines from the list as well as an action to be performed on  
3 the selected virtual machine, the selected action to be performed on the selected virtual machine  
4 independent of the other of the plurality of virtual machines,” “receiving user input from the remote  
5 computer via the first GUI, the user input including a selection of a virtual machine and an action  
6 to be performed on the selected virtual machine,” and “in accordance with the user input, performing  
7 the action using the host computer on the selected virtual machine.”

8 253. For example, the vSphere Client, the HTML5 based web client that “is automatically  
9 installed as part of the vCenter Server appliance.”<sup>141</sup> The product documentation explains that “[t]he  
10 vSphere Client is the primary interface for connecting to and managing vCenter Server instances.”<sup>142</sup>  
11 The vSphere Client is accessed by “[o]pening a Web browser and enter[ing] the URL for your  
12 vCenter Server instance: [https://vcenter\\_server\\_ip\\_address\\_or\\_fqdn](https://vcenter_server_ip_address_or_fqdn)” or “enter[ing] the URL for the  
13 vSphere Client: [https://vcenter\\_server\\_ip\\_address\\_or\\_fqdn/ui](https://vcenter_server_ip_address_or_fqdn/ui).”<sup>143</sup> Thus, the vSphere Client is  
14 provided from vCenter Server to a remote computer through the web browser.

15 254. The vSphere Client display a drop-down list of virtual machines on a specific host.

28 <sup>143</sup> “vCenter Server and Host Management, Update 3 VMware vSphere 7.0, VMware ESXI 7.0,  
vCenter Server 7.0,” VMware.com (copyright 2009-2024), [https://docs.vmware.com/en/VMware-  
vSphere/7.0/vsphere-esxi-vcenter-server-703-host-management-guide.pdf](https://docs.vmware.com/en/VMware-vSphere/7.0/vsphere-esxi-vcenter-server-703-host-management-guide.pdf).

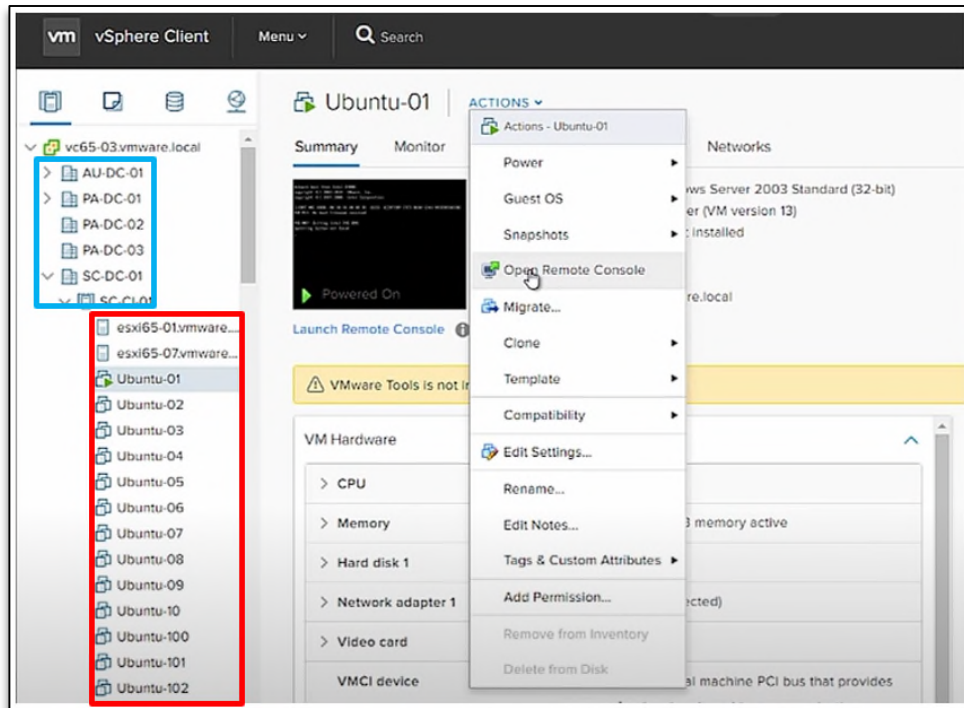

Figure 52. Screenshot of vSphere Client showing drop down menu of hosts highlighted in blue and drop down menu of virtual machines highlighted in red.

255. Once the drop-down list of virtual machines is displayed, a user may select one by clicking on it to display information on that virtual machine.

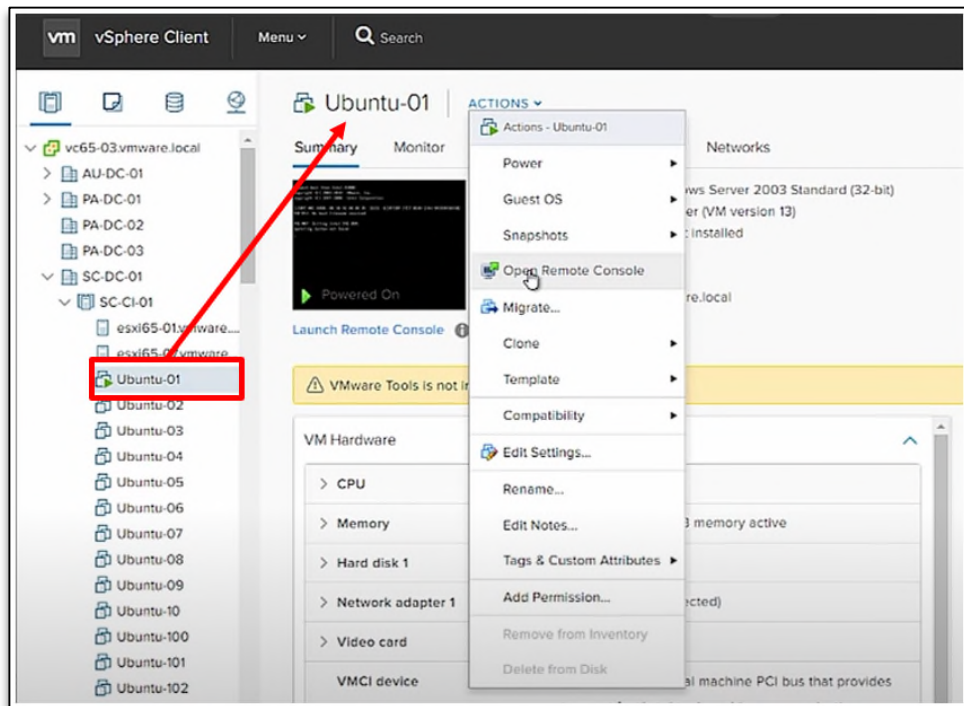

Figure 53. Screenshot of vSphere Client with selected virtual machine highlighted in red.

256. Once a virtual machine is selected, the user may select an “Actions” drop down menu to see a list of actions which may be performed with respect to the selected virtual machine.

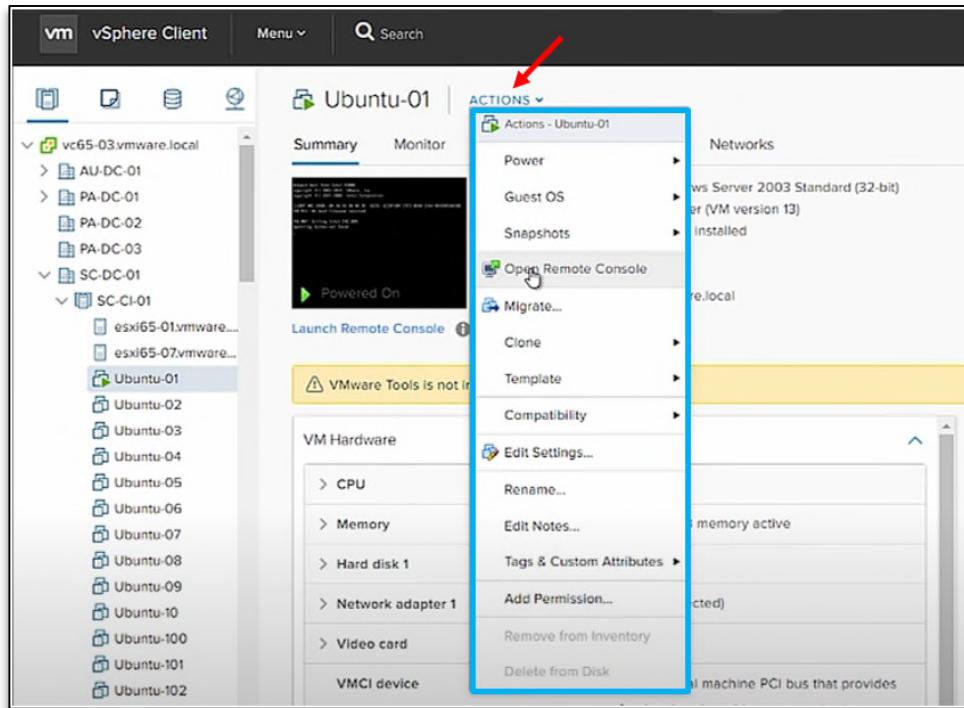

Figure 54. Screenshot of vSphere Client with “Actions” button highlighted with red arrow and list of possible actions highlighted in blue.

257. The ’122 Accused Products implement a method comprising “generating a second GUI to enable the user of the remote computer to select a virtual machine from the plurality of virtual machines to which a hardware peripheral device accessible to the remote computer is to be mapped.”

258. For example, the vSphere client includes a GUI that allows a user to select a virtual machine and customize the “hardware” of said virtual machine by mapping a hardware device (e.g., a CD/DVD drive) to a virtual machine.

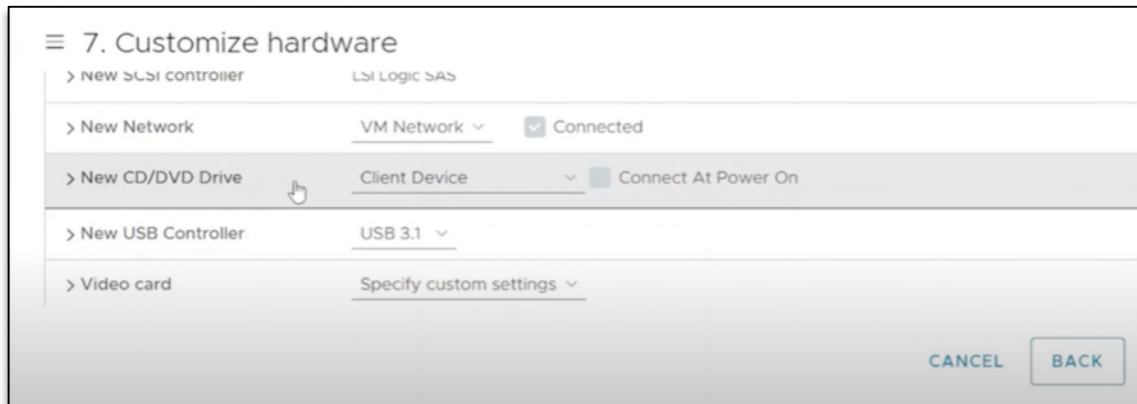

Figure 55. Screenshot of vSphere Client “Customize Hardware” GUI.

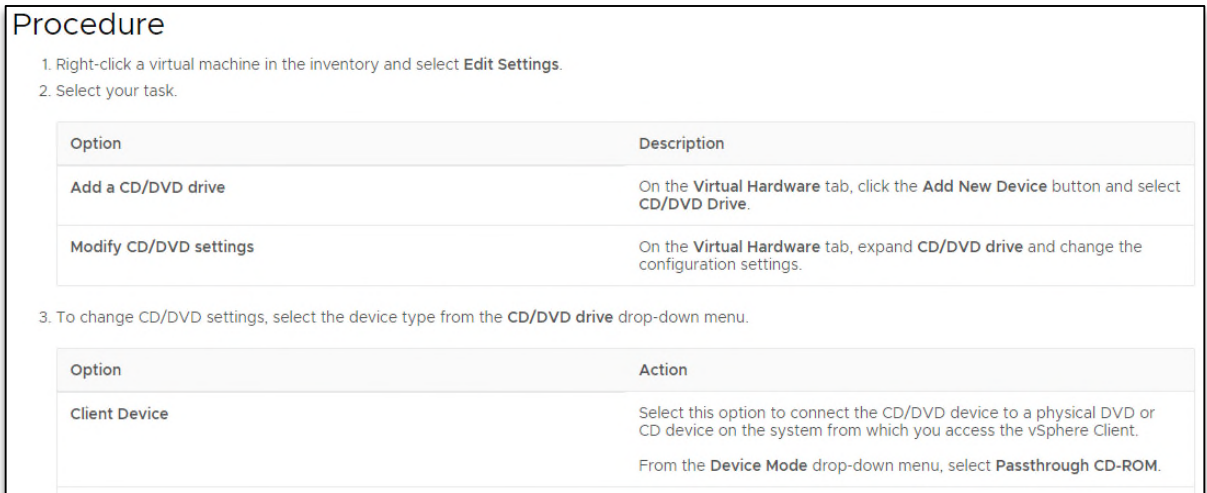

Figure 56. Screenshot from VMware website explaining how to enable “Passthrough CD-ROM” from the vSphere Client.<sup>144</sup>

**DIRECT INFRINGEMENT**

259. Broadcom and VMware directly infringe the ’122 Patent in multiple ways.

260. Broadcom and VMware directly infringe the ’122 Patent at least when they perform the claimed methods of the ’122 Patent, in violation of at least 35 U.S.C. § 271(a), by providing the ’122 Accused Products as a service.<sup>145</sup>

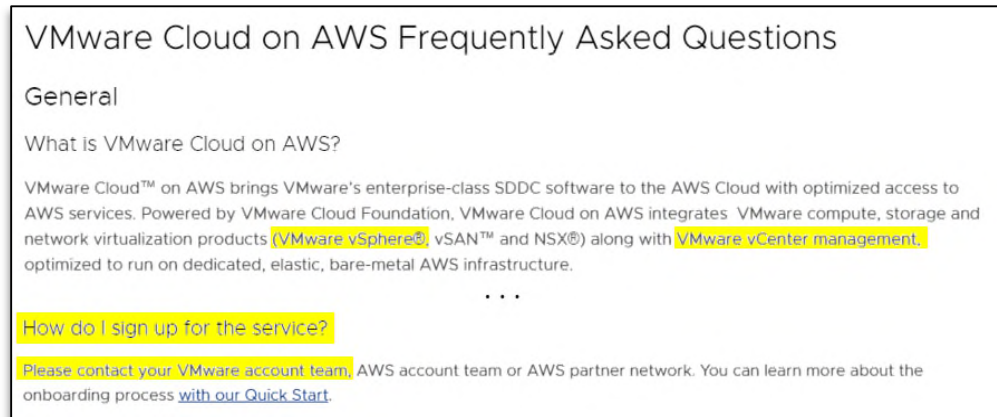

Figure 57. Annotated screenshot from VMware Cloud Tech Zone FAQ page explaining the VMware Cloud on AWS Service and how to sign up.

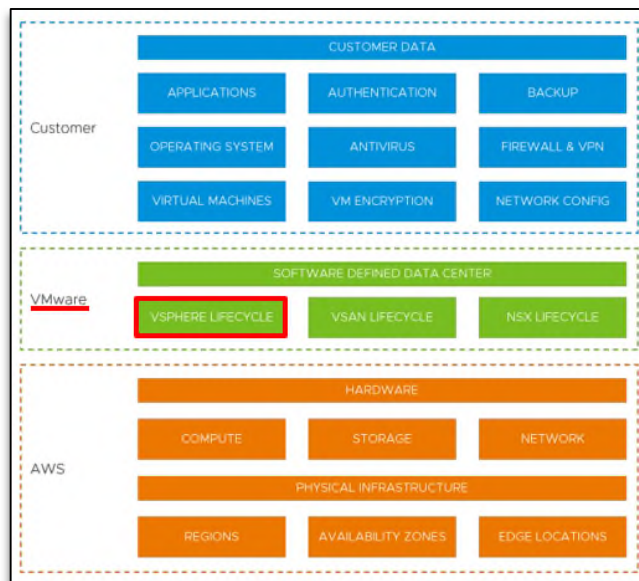

261. When a customer signs up for and uses a vSphere cloud-based service (e.g., VMware Cloud on AWS), Broadcom and VMware perform the claimed methods as discussed above by

<sup>144</sup> “How do I Add or Modify a Virtual Machine CD or DVD Drive,” VMware.com (updated January 25, 2024), [https://docs.vmware.com/en/VMware-vSphere/7.0/com.vmware.vsphere.vm\\_admin.doc/GUID-C58B93A7-52CF-456D-95C1-8B5A906C9619.html](https://docs.vmware.com/en/VMware-vSphere/7.0/com.vmware.vsphere.vm_admin.doc/GUID-C58B93A7-52CF-456D-95C1-8B5A906C9619.html).

<sup>145</sup> As explained below, vSphere Client is installed in VMware vCenter.

1 controlling and maintaining responsibility for the infringing functionality.

2 262. Broadcom and VMware also conditions the benefit of the '122 Accused Products on  
 3 the end-user performing the infringing functionality and Broadcom controls the manner and timing  
 4 of said performance. Broadcom and VMware maintain a “Shared Responsibility Model” that is  
 5 “common among the different VMware Cloud Providers” and “defines distinct roles and  
 6 responsibilities between the VMware Cloud Infrastructure Services provider and an organization  
 7 consuming the service.”<sup>146</sup> As shown below, Broadcom and VMware maintain responsibility for the  
 8 “vSphere Lifecycle.” As further confirmation, when describing the AWS implementation,  
 9 Broadcom and VMware describe one of the goals of the shared responsibility model as being to  
 10 “[p]rotect VMware-managed objects” including “management appliances” and “hosts.”<sup>147</sup> The  
 11 “management appliances” and “hosts” execute code performing the steps of Claim 1 described  
 12 above.

13

1 demonstrate, test, install, and configure the '122 Accused Products for their customers. For example,  
2 Broadcom and VMware directly infringe by using the '122 Accused Products for demonstrating via  
3 VMware Hands-on Labs, *infra*.

4 **INDIRECT INFRINGEMENT: INDUCEMENT**

5 264. Broadcom and VMware have had knowledge of the '122 Patent since at least August  
6 16, 2013, when VMware received the first of numerous rejections based on the publication  
7 corresponding to the '122 Patent (U.S. Pub. No. 2012/0124580, the “'580 Publication”). During  
8 prosecution of the application that issued as U.S. Patent No. 8,938,680, the USPTO rejected  
9 VMware’s patent application’s claims based on the '580 Publication in rejections on August 16,  
10 2013 and a final rejection on January 31, 2014. VMware discussed and proposed amendments over  
11 the '580 Publication on November 15, 2013 and responded to these rejections on November 18,  
12 2013 and June 2, 2014.

13 265. VMware was reminded of the '122 Patent, when VMware’s claims in a second  
14 application were rejected based on the '580 Publication. During prosecution of the application that  
15 issued as U.S. Patent No. 10,079,797, the USPTO issued rejections on December 9, 2016, May 19,  
16 2017, and September 11, 2017 based on the '580 Publication. VMware responded to and  
17 substantively addressed the '580 Publication on February 9, 2017, August 21, 2017, and January  
18 11, 2018, respectively, as well as in an April 10, 2017 response to a USPTO advisory action.

[remainder of page intentionally left blank]

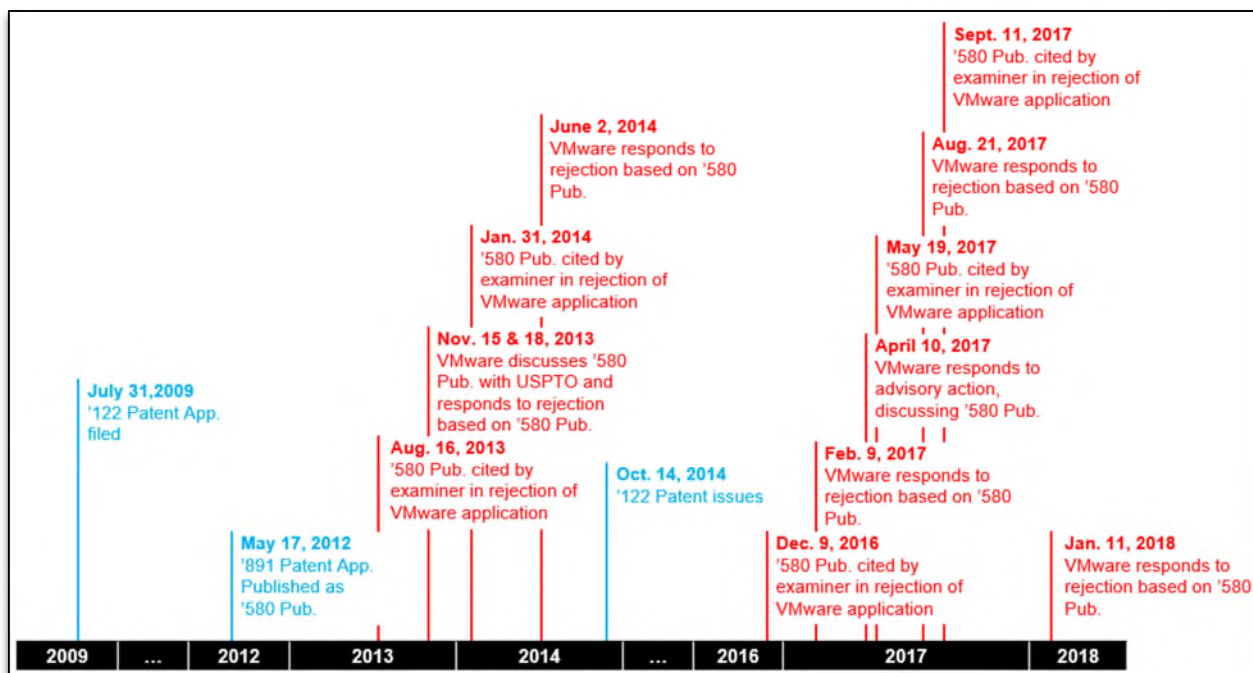

Figure 59. Timeline showing Broadcom and VMware's knowledge of the '122 Patent with activities related to '122 Patent in blue and activities related to the Broadcom and VMware's knowledge of the '122 Patent in red.

266. VMware's knowledge of the Asserted Patents, including the '122 Patent, can be imputed to Broadcom for the reasons stated above, ¶¶84-85, incorporated by reference herein.

267. Broadcom's direct knowledge of the '122 Patent, is detailed above, ¶¶ 86-87, incorporated by reference herein.

268. Broadcom and VMware have induced infringement of at least Claim 10 of the '122 Patent in violation of at least 35 U.S.C. § 271(b). Users of the '122 Accused Products directly infringe at least Claim 10 of the '122 Patent when they use the '122 Accused Products in the ordinary, customary, and intended way. Broadcom and VMware's inducements include, without limitation and with specific intent to encourage the infringement, knowingly inducing consumers to use the '122 Accused Products within the United States in the ordinary, customary, and intended way by, directly or through intermediaries, supplying the '122 Accused Products to consumers within the United States and instructing and encouraging such customers to use the '122 Accused Products in the ordinary, customary, and intended way, which Broadcom and VMware know or should know infringes at least Claim 10 of the '122 Patent.

269. Broadcom and VMware sell the '122 Accused Products to their customers as software for installation on customer computer(s). When Broadcom and VMware's customers

1 install the '122 Accused Products and run a virtual machine, at least Claim 10 of the '122 Patent is  
2 performed. In at least this way, the customers of Broadcom and VMware directly infringe the '122  
3 Patent *while* Broadcom and VMware know of the '122 Patent, and should know that these activities  
4 infringe the '122 Patent, and specifically intend instruct their customers to infringe. Broadcom and  
5 VMware have provided and continue to provide these instructions to infringe despite knowing of  
6 the '122 Patent and knowing or being willfully blind to the fact these activities infringe the '122  
7 Patent.

8 270. Broadcom and VMware's instructions to their customers to infringe are made at least  
9 through their creation and distribution of marketing, promotional, and instructional materials. The  
10 promotional and product literature for the Accused Products is designed to instruct, encourage,  
11 enable, and facilitate the user of the '122 Accused Products to use the '122 Accused Products in a  
12 manner that directly infringes the '122 Patent. And Broadcom and VMware provide instructions,  
13 support, and technical assistance to their customers in support of committing the infringement.

14 271. One nonlimiting example of Broadcom and VMware's inducement includes at least  
15 VMware Hands-on Labs for vSphere-based products.

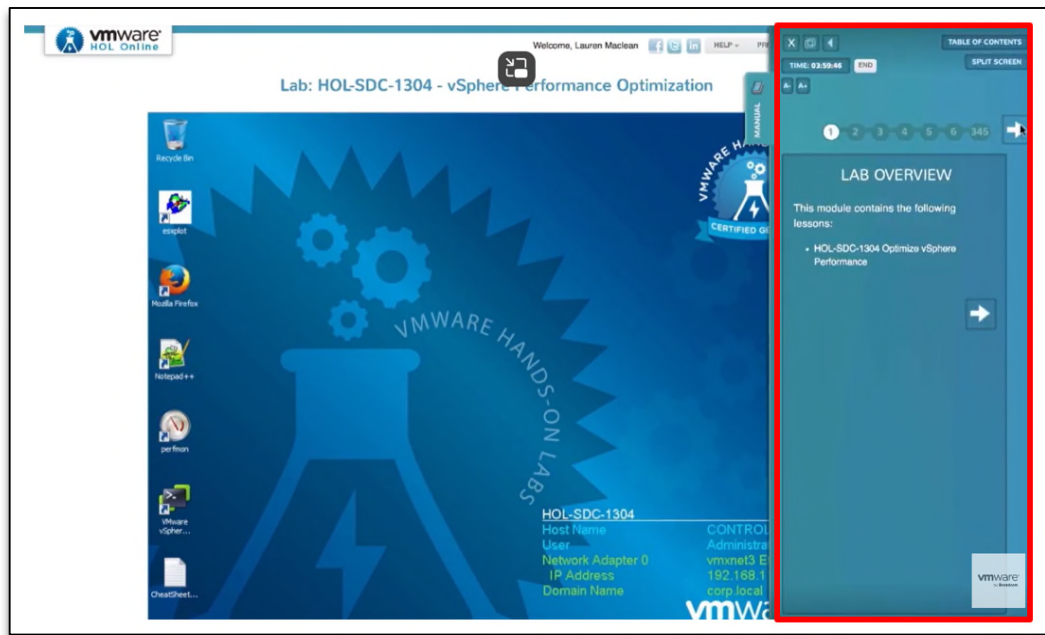

16 272. On the official VMware YouTube page, Broadcom and VMware explain that  
17 VMware Hands-On Labs "delivers a real virtualized infrastructure in the cloud powered by  
18 VMware" to let customers "try out products from the convenience of [their] browser."<sup>148</sup> Broadcom  
19 and VMware further explain that "each self-paced lab is guided with a manual and built in modules  
20 so you can take all or just part of a lab and come and go from labs as often as you like."<sup>149</sup>

21  
22  
23  
24  
25  
26

27 *Figure 61. Screenshot from VMware YouTube video titled “What are VMware Hands-on Labs?”*

28 274. Besides the VMware Hand-on Labs discussed above, Broadcom and VMware publicly share numerous instructions, troubleshooting manuals, and product documentations

1 through their support portal (<https://support.broadcom.com/>),  
2 <https://docs.vmware.com/en/VMware-vSphere/index.html>, and  
3 <https://docs.vmware.com/en/VMware-Cloud-Director/index.html>.

4 275. Like the Hands-on Labs discussed above, these support documents also provide step-  
5 by-step instructions explaining how to use the '122 Accused Products in an infringing manner to  
6 determine performance metrics such as CPU utilization.

7 276. Thus, Broadcom and VMware have induced their customers to infringe the '122  
8 Patent. Broadcom and VMware's knowing inducement of their customers to infringe has caused  
9 and continues to cause damage to Netflix, and Netflix is entitled to recover damages sustained as a  
10 result of Broadcom and VMware's wrongful acts in an amount subject to proof at trial.

#### 11 **WILLFUL INFRINGEMENT**

12 277. Broadcom and VMware's infringement of the '122 Patent has been willful and  
13 deliberate.

14 278. As discussed above, Broadcom and VMware have had actual knowledge of the '122  
15 Patent since August 16, 2013.

16 279. As discussed above, Broadcom and VMware knew or should have known that their  
17 actions infringe and actively induce infringement of the '122 Patent.

18 280. The willful infringement facts for the Asserted Patents, ¶¶ 102-111 *supra*, are  
19 incorporated by reference herein.

20 281. Thus, Broadcom and VMware have willfully infringed the '122 Patent. Broadcom  
21 and VMware's knowing and willful infringement has caused and continues to cause damage to  
22 Netflix, and Netflix is entitled to recover damages sustained as a result of Broadcom and VMware's  
23 wrongful acts in an amount subject to proof at trial.

#### 24 **PRAYER FOR RELIEF**

25 Netflix respectfully requests the following relief:

- 26 A. That the Court enter judgment that Broadcom, alone or in combination with  
27 VMware, willfully infringes each of the Asserted Patents;  
28 B. That the Court award damages to Netflix for Broadcom's infringement, either alone

or on combination with VMware, including interest;

C. That the Court award treble damages and attorneys’ fees under 35 U.S.C. §§ 284 and 285;

D. That the Court award Netflix its statutory costs; and

E. That the Court award Netflix any and all other relief to which Netflix may be entitled and that the Court may deem just, equitable, and proper.

**JURY DEMAND**

Netflix respectfully demands a jury trial pursuant to Rule 38(b) of the Federal Rules of Civil Procedure on all claims and issues so triable.
